GEMINI

Gemini Legal Support, Inc., a professional photocopier organized and existing under the laws of the State of California has reviewed the attached records and attests that said records consist of 1581 pages.

Executed on 09/27/2024, at Rocklin, California.

Respectfully,
Gemini Legal Support, Inc.

STATE OF CALIFORNIA
DEPARTMENT OF INDUSTRIAL RELATIONS
DIVISION OF WORKERS' COMPENSATION
WORKERS' COMPENSATION APPEALS BOARD

<u>Michelle Tiu</u> Claimant/Applicant, <u>Kaiser Permanente/SEDGWICK CMS</u> Employer/insurance Carrier/Defendant.	VS.
--	-----

Case No. ADJ19391023

(IF APPLICATION HAS BEEN FILED, CASE NUMBER
MUST BE INDICATED REGARDLESS OF DATE OF INJURY)

SUBPOENA DUCES TECUM

(When records are mailed, identify them by using above
case number or attaching a copy of subpoena)

Where no application has been filed for injuries on or after
January 1, 1990 and before January 1, 1994, subpoena will
be valid without a case number, but subpoena must be served
on claimant and employer and/or insurance carrier.

See instructions below.*

*The People of the State of California Send Greetings to: KFH / SCPMG - EMPIRE CORPORATE PLAZA -
1830 CALIFORNIA AVE, 2ND FLOOR - CORONA, CA 92881*

We COMMAND YOU to appear before: Gemini Legal Support, Inc.
at 250 Technology Way, Rocklin, CA 95765

on the 26th day of September, 2024 at 10:00AM o'clock M.. to testify in the above-
entitled matter and to bring with you and produce the following described documents, papers, books and records.

-Please see Attachment 3 for detailed description of requested records-

(Do not produce X-rays unless specifically mentioned above.)

For failure to attend as required, you may be deemed guilty of a contempt and liable to pay to the parties aggrieved all
losses and damages sustained thereby and forfeit one hundred dollars in addition thereto.

This subpoena is issued at the request of the person making the declaration on the reverse hereof, or on the copy which is
served herewith.

Date 9/6/2024

**WORKERS' COMPENSATION APPEALS BOARD
OF THE STATE OF CALIFORNIA**

Secretary, Assistant Secretary, Workers' Compensation Judge

***FOR INJURIES OCCURRING ON OR AFTER JANUARY 1, 1990,
AND BEFORE JANUARY 1, 1994**

If no Application for Adjudication of Claim has been filed, a declaration under
penalty of perjury that the Employee's Claim for Workers' Compensation Benefits
(Form DWC-1) has been filed pursuant to Labor Code Section 5401 must be
executed properly.

**SEE REVERSE SIDE
(SUBPOENA INVALID WITHOUT DECLARATION)**

You may fully comply with this subpoena by mailing the records described (or authenticated copies, Evid. Code 1561) to the person and place
stated above within ten (10) days of the date of service of this subpoena.

This subpoena does not apply to any member of the Highway Patrol, Sheriff's Office or city Police Department unless accompanied by notice
from this Board that deposit of the witness fee has been made in accordance with Government Code 68097.2, et seq

DECLARATION FOR SUBPOENA DUCES TECUM

Case Number: ADJ19391023

STATE OF CALIFORNIA, County of Orange

The undersigned states:

That he /she is (one of) the attorney(s) of record / representative(s) for the applicant/defendant in the action captioned on the reverse hereof. That KFH / SCPMG - EMPIRE CORPORATE PLAZA has in his/her possession or under his/her control the documents described on the reverse hereof. That said documents are material to the issues involved in the case for the following reasons:

SAID RECORDS ARE RELEVANT TO THE ALLEGATIONS AND DEFENSES BY THE PARTIES IN THE PROSECUTION OF THIS MATTER, TO PROVIDE AN ACCURATE MEDICAL HISTORY OF THE APPLICANT, TO PROVE AN INJURY AND NOTICE THEREOF, TO PROVIDE THE RIGHT TO COMPENSATION, PERMANENT AND TEMPORARY DISABILITY, MEDICAL TREATMENT, AND ANY POSSIBLE PENALTIES. PURSUANT TO LABOR CODE SECTION 5401 FORM DWC 1 HAS BEEN DULY FILED.

Declaration for Injuries on or After January 1, 1990 and Before January 1, 1994

☐ That an Employee's Claim for Workers' Compensation Benefits (DWC Form 1) has been filed in accordance with Labor Code Section 5401 by the alleged injured worker whose records are sought, or if the worker is deceased, by the dependent(s) of the decedent, and that a true copy of the form filed is attached hereto. (Check box if applicable and part of declaration below. See instructions on front of subpoena.)

I declare under penalty of perjury that the foregoing is true and correct

NOTICE TO CONSUMER OR EMPLOYEE

TO (name): Michelle Tiu and interested parties

1. PLEASE TAKE NOTICE THAT **REQUESTING PARTY (name):**

Michelle Tiu

SEEKS YOUR RECORDS FOR EXAMINATION by the parties to this action on (specify date): Thu, Sep 26, 2024

The records are described in the subpoena directed to **witness** (specify name and address of entity from whom records are sought):

KFH / SCPMG - EMPIRE CORPORATE PLAZA
1830 CALIFORNIA AVE, 2ND FLOOR
CORONA, CA 92881

A copy of the subpoena is attached.

2. IF YOU OBJECT to the production of these records, YOU MUST DO ONE OF THE FOLLOWING BEFORE THE DATE SPECIFIED IN ITEM a. OR b. BELOW:

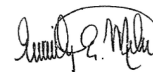

a. If you are a party to the above-entitled action, you must file a motion pursuant to Code of Civil Procedure section 1987.1 to quash or modify the subpoena and give notice of that motion to the **witness** and the **deposition officer** named in the subpoena at least five days before the date set for production of the records.

b. If you are not a party to this action, you must serve on the **requesting party** and on the **witness**, before the date set for production of the records, a written objection that states the specific grounds on which production of such records should be prohibited. You may use the form below to object and state the grounds for your objection. You must complete the proof of service on the reverse side indicating whether you personally served or mailed the objection. The objection should not be filed with the court. **WARNING:** IF YOUR OBJECTION IS NOT RECEIVED BEFORE THE DATE SPECIFIED IN ITEM 1, YOUR RECORDS MAY BE PRODUCED AND MAY BE AVAILABLE TO ALL PARTIES.

3. YOU OR YOUR ATTORNEY MAY CONTACT THE UNDERSIGNED to determine whether an agreement can be reached in writing to cancel or limit the scope of the subpoena. If no such agreement is reached, and if you are not otherwise represented by an attorney in this action, YOU SHOULD CONSULT AN ATTORNEY TO ADVISE YOU OF YOUR RIGHTS OF PRIVACY.

DECLARATION OF CUSTODIAN OF MEDICAL / BILLING RECORDS

Patient Name: TIU,MICHELLE E

Date of Birth: 10/31/1976 Kaiser Permanente Medical Record Number: 000006993279

Plaintiff: MICHELLE TIU Defendant: KAISER
PERMANENTE/SEDGWICK CMS

Case or Reference Number: ADJ19391023

Says as follows:

The declarant is the duly authorized Custodian of Medical Records for Kaiser Foundation Hospital-Southern California and Southern California Permanente Medical Group, and has the authority to certify said records.

The attached medical / billing records are a true copy of the records described in the subpoena duces tecum, court order, or other request, that are permitted to be disclosed by law.

The records were prepared by the personnel of the hospital, staff physicians, or persons acting under the control of either, in the ordinary course of business at or near the time of the act, condition, or event.

Pursuant to state and federal law, inpatient psychiatric treatment records, chemical dependency treatment records, and HIV test results are subject to strict confidentiality, and may not be disclosed in response to a routine subpoena. Such material may only be obtained upon a special court order, or specific written authorization that meets federal or state guidelines.

I, **Ardella Calhoun, Supervisor, SCAL Central Release of Information Unit**, declare under perjury that the foregoing is true and correct.

CLINICAL HISTORY: ReasonReason patient unable to get MRI due to facial surgery and metal plate. 43 y/o f with chronic low back pain and left posterior thigh pain, numbness, likely left lower extremity radicular symptoms.

COMPARISON: No previous study available for comparison.

TECHNIQUE: Study performed per protocol

CT Dose:

As required by California law, the CT DIvol and DLP radiation doses associated with this CT study are listed below. This represents the estimated dose to a standard lucite phantom resulting from the technique used for this study, but is not the dose to this specific patient.

Type / CT DIvol / DLP / Phantom

Helical / 5.62 / 184.62 / B

Total Exam DLP: 184.62

CT DIvol = mGy DLP = mGy-cm

Phantom: B=Body32, H=Head16

FINDINGS:

Normal lordosis. No compression fracture or spondylolisthesis. No significant disc space narrowing.

T12-L1: Unremarkable.

L1-2: Unremarkable.

L2-3: Unremarkable.

L3-4: Diffuse 2 mm posterior disc bulge. Mild ligamentum flavum hypertrophy.

L4-5: Diffuse 3 mm posterior disc bulge. Mild ligamentum flavum hypertrophy.

L5-S1: Diffuse 3 mm posterior disc bulge.

No significant neuroforaminal stenosis. No significant spinal canal stenosis. Paraspinal soft tissue structures are intact.

05/13/2020 - Diagnostic Imaging in HOV GENERAL RADIOLOGY (continued)

Imaging (continued)

IMPRESSION:

No acute findings. Diffuse mild posterior disc bulge at L3-4, L4-5, and L5-S1. No significant spinal canal stenosis. No significant neuroforaminal stenosis.

05/13/2020 - Diagnostic Imaging in HOV GENERAL RADIOLOGY (continued)

Imaging (continued)

CLINICAL HISTORY: ReasonReason patient unable to get MRI due to facial surgery and metal plate. 43 y/o f with chronic low back pain and left posterior thigh pain, numbness, likely left lower extremity radicular symptoms.

COMPARISON: No previous study available for comparison.

TECHNIQUE: Study performed per protocol

CT Dose:

As required by California law, the CTDIvol and DLP radiation doses associated with this CT study are listed below. This represents the estimated dose to a standard lucite phantom resulting from the technique used for this study, but is not the dose to this specific patient.

Type / CTDIvol / DLP / Phantom

Helical / 5.62 / 184.62 / B

Total Exam DLP: 184.62

CTDIvol = mGy DLP = mGy-cm

Phantom: B=Body32, H=Head16

FINDINGS:

Normal lordosis. No compression fracture or spondylolisthesis. No significant disc space narrowing.

T12-L1: Unremarkable.

L1-2: Unremarkable.

L2-3: Unremarkable.

L3-4: Diffuse 2 mm posterior disc bulge. Mild ligamentum flavum hypertrophy.

L4-5: Diffuse 3 mm posterior disc bulge. Mild ligamentum flavum hypertrophy.

L5-S1: Diffuse 3 mm posterior disc bulge.

No significant neuroforaminal stenosis. No significant spinal canal stenosis. Paraspinal soft tissue structures are intact.

IMPRESSION:

No acute findings. Diffuse mild posterior disc bulge at L3-4, L4-5, and L5-S1. No significant spinal canal stenosis. No significant neuroforaminal stenosis.

Resulting lab: PENRAD

Lab Technician: VICKI NGUYEN

Narrative:

- MAMMO BILAT SCREENING SEQUENTIAL W OR WO COMPUTER AIDED DETECTION ANALYSIS

BILATERAL DIGITAL SCREENING MAMMOGRAM SEQUENTIAL ORDER: 3/18/2023

CLINICAL: Routine screening digital mammogram, no complaints.
Sequential.

4th dose covid booster: 9/2022 Right Arm.

Comparison is made to exams dated: 10/15/2021 and 9/17/2019 Kaiser - Irvine Medical Center. Both breasts are extremely dense, which lowers the sensitivity of mammography.

No significant masses, calcifications, or other findings are seen in either breast.

There has been no significant interval change.

IMPRESSION: NEGATIVE

There is no mammographic evidence of malignancy. A routine screening mammogram is recommended within 2 years.

Kaiser Permanente regional guidelines recommend annual screening mammography for high risk patients and screening mammography within 2 years for normal low risk patients. Determination of risk assessment by radiology is limited and ultimately should be determined by the patient's primary care provider in collaboration with the patient.

Mammograms do not detect all breast cancer. Up to 15 percent of breast cancer can't be detected by mammography. Patients with palpable

03/18/2023 - Screening Mammogram in SAND CANYON MOB 2 MAMMO (continued)**Imaging (continued)**

abnormalities may require further investigation.
(03/18/2025)

Disposition and Responsibility

A letter with these results will be sent to the patient by the
Mammography Department.

Order status: CompletedResulted by: Long, Simon King-Hon (M.D.), M.D.

Filed by: Interface, Scal_Radiology Results In 06/27/24 1454Performed: 06/26/24 0918 - 06/26/24 0941

Accession number: 214DX00003067490Resulting lab: PS360

Narrative:
CLINICAL HISTORY: Reason: WORK COMP Neck pain with referral to shoulder

COMPARISON: June 9, 2023

Impression:
FINDINGS/IMPRESSION:
Cervical vertebral bodies are normal in height. Straightening of cervical lordosis may be due to patient position. No acutely displaced fracture is identified. Minimal degenerative changes noted of the cervical spine, manifested by minimal disc space narrowing and osteophyte formation. In the cervical spine, this is most severe at C6-7 and C7-T1, not significantly changed from the prior exam.
No significant soft tissue abnormality.

Patient

Kaiser Permanente Disclosure of Patient Medical Information

Kaiser Permanente documents patient medical record information in a Federally certified electronic medical record.

The output contained in this file is one or more of the following:

- A true and accurate copy of the requested patient medical record information for the timeframe requested as authorized by the patient or allowed by law or regulation
- If a medical certification form was requested, we may have substituted relevant medical records in lieu of form completion
- We may have also substituted a standardized electronic form, generated from our certified electronic medical record in lieu of form completion

State and federal law permit the use of electronic signatures (e-signatures) and electronic records in connection with transactions between parties.

- Medical certification forms and electronic records that are signed using electronic signatures can be audited and validated to prevent fraud
- The relevant laws provide that electronic signatures are as legally valid and as legally acceptable as wet signatures

This record output was generated on 9/24/24 and certified by Kaiser Permanente Release of Medical Information

Patient Instructions

Please log onto www.kp.org to register on our website. You will be able to view results, make appointments, e-mail your physician, and request a prescription refill.

Also, be sure to check out our Orange County's Women's Health website at www.kpwomenshealth.org.

If I have placed orders for medication(s) for you, here is some useful information. Prescriptions can be filled at any Orange County Kaiser pharmacy. You MUST check in with the pharmacist for your order to start to be filled. They WILL NOT fill your prescription unless you do so.

I hope that I have addressed all your questions and concerns. If not, or you have additional questions or require further explanation, then please contact me. I can be contacted via e-mail through the website 'www.kp.org', or I can also be contacted by calling 1-888-988-2800. Please leave a message and I or my nurse will call you back. If you have not already signed up for our website, I strongly encourage you to do so.

Take charge of your health.

Call the Healthy Living Helpline at 1-866-402-4320. One free call connects you with lifestyle coaches who can provide strategies and resources to help you quit smoking, get active and fit, lose weight and eat healthy.

We also offer the following Health Education classes:

- Diabetes (4 session series that includes diabetes nutrition and testing your blood sugar)
- Pre-Diabetes: Preventing Diabetes
- High Blood Pressure
- Heart Failure
- Cholesterol
- Asthma
- Nutrition and Weight Management

08/01/2014 - Office Visit in WOMENS HEALTH CENTER/OB-GYN (continued)**Patient Instructions (continued)**

- Mind-Body
- Depression
- Managing Ongoing Health Conditions
- Women's Health
- Yoga

To register for Health Education classes, call the appointment center at 1-888-988-2800.

May you live long and THRIVE.

Before You Try Getting Pregnant: Preconception Health**Why Preconception Health Matters?**

Preconception health is a woman's health before she gets pregnant. It means knowing how health conditions and risk factors could affect you or your unborn baby if you were to get pregnant. Having a healthy baby someday starts well before pregnancy. You should start making healthy choices now.

Get Your Body Ready: Lead a Healthy Lifestyle Now

Even though you're not pregnant, it's still a good time to take some steps to have a healthy pregnancy and a healthy baby. Now more than ever, it's smart to:

- Get regular exercise, get plenty of rest, and eat healthy foods.
- Limit caffeine to 1 to 2 cups of caffeinated coffee, tea, or soda per day.
 - Having too much caffeine can increase the risk of miscarriage. In one Study, women who drank two or more caffeinated beverages had twice the miscarriage risk as women who drank no caffeine.
- Avoid alcohol.
 - Drinking alcohol can cause your baby to have physical and mental birth defects called fetal alcohol syndrome. Heavy drinking increases the risk of miscarriage. Pregnant women and women thinking about getting pregnant should avoid alcohol entirely.
- Quit smoking.
 - Smoking may make it more difficult to get pregnant. Smoking during pregnancy nearly doubles the risk of having a baby with a low birth weight. It also increases the risk for premature delivery, pregnancy complications, miscarriage, and sudden infant death syndrome (SIDS).
- Stop using illegal drugs and medications not prescribed to you.
 - These drugs pose many risks, including preterm birth (delivery before 37 weeks of pregnancy), low birth weight, birth defects, learning or behavioral problems, and withdrawal symptoms.
- Avoid chemicals that can affect your reproductive health.
 - Use glass containers to microwave food and avoid canned products, as

08/01/2014 - Office Visit in WOMENS HEALTH CENTER/OB-GYN (continued)**Patient Instructions (continued)**

some plastic and can linings have a chemical that may cause problems in pregnancy. Eat fish that has low levels of mercury, such as trout, salmon, tilapia, or catfish. You can safely eat up to 12 ounces of fish (about 2 meals) per week while pregnant.

Plan Ahead

- Start taking a daily prenatal supplement that has 400 to 800 micrograms (mcg) of folic acid at least one month before pregnancy. This has been shown to decrease the risk of having a baby with defects in the brain or spinal cord.
- Keep track of your menstrual cycle (periods) and be aware of your fertility peaks. You can use the fertility calculator <https://members.kaiserpermanente.org/kpweb/healthency.do?hwid=tn9893>
- See your dentist regularly, before and during pregnancy. If you need dental work, have it completed before you get pregnant.
- Hormone shifts during pregnancy can make you more likely to get gum disease. If you have gum disease, have it treated before you get pregnant.
- Get tested and treated for sexually transmitted infections (STIs).

Schedule a preconception visit with your physician. Before you get pregnant, talk to your physician about:

- Medical conditions.
 - If you have a medical condition, be sure it is under control. Some conditions that can affect or be affected by pregnancy include asthma, diabetes, obesity, high blood pressure, oral health, kidney disease, thyroid disease, and seizure disorders.
- Medicines and supplements.
 - Talk to your physician about any medications or supplements you are taking. Some medications are not safe for the baby when you are pregnant, and in many cases your physician can substitute a safer one. Do not stop taking prescribed medications until you talk to your physician.
- Intimate partner violence.
 - Talk to your physician if you are experiencing threats or physical, sexual, or emotional abuse, because it affects your health and overall well-being.
- Genetic screening.
 - You may want to have a screening test if you or your partner has a family history of genetic disorders.
- Immunizations you may need.
 - Tdap (tetanus-diphtheria-pertussis)
 - MMR (measles, mumps, rubella)
 - Varicella (chickenpox)
 - Influenza (if you may get pregnant during flu season)
 - Hepatitis B

Please advise the patient - if this is just for her annual examination - she can push it out 6 more months.

If she has an active problem, then OK to book with a different provider - on that day.

Thanks

OBJECTIVE

BP 108/67 | Pulse 98 | Ht 1.575 m (5' 2") | LMP 09/23/2014
ABDOMEN: Nontender,no masses, no organomegaly

09/29/2014 - Office Visit in WOMENS HEALTH CENTER/OB-GYN (continued)

Clinical Notes (continued)

PELVIC EXAM:

Ext/BUS: Normal appearing labia, clitoris and urethral meatus.

Vagina: Normal mucosa with good support.

Cervix: No gross lesions.

Uterus: uterus is normal size, shape, consistency and nontender

Adnexa: No masses or tenderness.

Rectal: Not indicated and Negative and confirms above exams.

IUD (Mirena) insertion

After informed consent obtained the cervix was visualized and cleansed with betadine. The prior pelvic exam was noted for the size and direction of the uterus. A tenaculum was placed on the anterior lip. The IUD was prepared for insertion as per manufacturer instructions. The uterus was sounded to 7 cms. The Mirena was then inserted to the fundus, withdrawn slightly and deployed. The strings were trimmed to 2-3cm.

The procedure was well tolerated

ASSESSMENT:

Mirena IUD insertion

PLAN

Patient will feel for the strings monthly, and will f/u at her next annual visit.

Patient Instructions

Your Kaiser Permanente Care Instructions

Intrauterine Device (IUD) Insertion: After Your Visit

Your Care Instructions

The intrauterine device (IUD) is a very effective method of birth control. It is a small, plastic, T-shaped device that contains copper or hormones. The doctor inserts the IUD into your uterus. A plastic string tied to the end of the IUD hangs down through the cervix into the vagina.

There are two types of IUDs. The copper IUD is effective for up to 10 years. The hormonal IUD is effective for either 3 years or 5 years, depending on which IUD is used. The hormonal IUD also reduces menstrual bleeding and cramping. Both types of IUD damage or kill the man's sperm. This means that the woman's egg does not join with the sperm. IUDs also change the lining of the uterus so that the egg does not lodge there.

The IUD is most likely to work well for women who have been pregnant before. Some women who have never been pregnant have more trouble keeping the IUD in the uterus. They also may have more pain and cramping after insertion.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- You may experience some mild cramping and light bleeding (spotting) for 1 or 2 days. Use a hot water bottle or a heating pad set on low on your belly for pain.
- Take an over-the-counter pain medicine, such as acetaminophen (Tylenol), ibuprofen (Advil, Motrin), and naproxen (Aleve) if needed. Read and follow all instructions on the label.
- Do not take two or more pain medicines at the same time unless the doctor told you to. Many pain medicines have acetaminophen, which is Tylenol. Too much acetaminophen (Tylenol) can be harmful.
- Check the string of your IUD after every period. To do this, insert a finger into your vagina and feel for the cervix, which is at the top of the vagina and feels harder than the rest of your vagina. You should be able to feel the thin, plastic string coming out of the opening of your cervix. If you cannot feel the string, use another form of birth control and make an appointment with your doctor to have the string checked.
- If the IUD comes out, save it and call your doctor. Be sure to use another form of birth control while the IUD is out.
- Use latex condoms to protect against sexually transmitted infections (STIs), such as gonorrhea and chlamydia. An IUD does not protect you from STIs. Having one sex partner (who does not have STIs and does not have sex with anyone else) is a good way to avoid STIs.

When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

09/29/2014 - Office Visit in WOMENS HEALTH CENTER/OB-GYN (continued)

Patient Instructions (continued)

- You passed out (lost consciousness).
- You have sudden, severe pain in your belly or pelvis.

Call your doctor now or seek immediate medical care if:

- You have new belly or pelvic pain.
- You have severe vaginal bleeding. You are passing clots of blood and soaking through your usual pads or tampons every hour for 2 or more hours.
- You are dizzy or lightheaded, or you feel like you may faint.
- You have a fever and pelvic pain or vaginal discharge.
- You have pelvic pain that is getting worse.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You cannot feel the string, or the IUD comes out.
- You feel sick to your stomach, or you vomit.
- You think you may be pregnant.

Where can you learn more?

Go to <http://www.kp.org>

Enter **U681** in the search box to learn more about **"Intrauterine Device (IUD) Insertion: After Your Visit"**.

Creation Time: 10/7/2014 1:34 PM

History:

Michelle E Tiu is a 37 year old female presents for the evaluation of pressure like frontal headaches and nausea, shaky since this am. Patient noted to have loose stools, in small amount and incomplete evacuation of stools over last 2-3 days. No bleeding issue. +flatus. No urinary symptoms.

Review of Systems

All other systems reviewed and are negative.

Physical Exam

Constitutional: She is well-developed, well-nourished, and in no distress. No distress.

Eyes: Conjunctivae and EOM are normal. Pupils are equal, round, and reactive to light.

Neck: Normal range of motion. Neck supple.

Cardiovascular: Normal rate, regular rhythm and normal heart sounds.

Pulmonary/Chest: Effort normal and breath sounds normal. No respiratory distress. She has no wheezes.

Abdominal: Soft. Bowel sounds are normal. She exhibits no distension. There is **tenderness (LLQ abd TTP mild to moderate)**. There is no rebound.

Musculoskeletal: She exhibits no edema.

Neurological: She is alert. Gait normal.

Skin: She is not diaphoretic.

Nursing note and vitals reviewed.

10/07/2014 - Office Visit in URGENT CARE - HARBOR MAC (continued)

Clinical Notes (continued)

ASSESSMENT:

564.00 CONSTIPATION
339.10 TENSION HEADACHE
789.00 ABDOMINAL PAIN

Comments:

Diet modification for constipation and to prevent constipation:

1. Diet modifications explained to the patient.
2. Drink plenty of fluids (8-10 glasses of water- more if involved in physical work) and increase fiber intake (fruits 3-5 a day, vegetables and salads)
3. Avoid red meat and white flour products (white bread, pasta, pizza, tortilla, donuts, bagels, pastry, cookies, cakes, etc). Metamucil with plenty of water use recommended as well as stool softners, colace-plus.
Transit time for red meat processing in the colon is much longer than other foods. White flour is very smooth and becomes lumpy and sticky in the colon.
Whole grains, corn, oatmeal, rye and barley, etc are recommended to improve the transit process of the digested foods.
4. May benefit from use of fleet enema for severe constipation and left sided abdominal pain. Metamucil fiber or miralax or magnesium citrate OTC medications are treatment options to cleanse the colon.
5. Molasses (grandma's name brand) - 1 tablespoon with a glass of warm water with some lemon juice empty stomach in the morning will help make bowel movement normal. Diabetic patient needs to be careful with this because of the sugar content of the molasses.
6. Other natural remedies choices were discussed with the patient.

Discharge instructions given:

1. Aftercare instructions print out given to the patient.
2. All of the questions regarding patient's condition, diagnosis, and prescribed medications were answered with satisfaction.
3. Complete the course of medications that are prescribed for the Condition, if any.
4. Benefits and the risks of the medications prescribed were explained.
5. Return to urgicenter or go to ER if there is worsening of the symptoms, or no improvement of the symptoms, otherwise follow up with PCP as needed in the future.
6. Patient was asked to check lab results and/or xray results online if they have signed up for kp.org.

Patient was advised that her constipation symptoms recently are causing her not feeling well. Advised to return if there is any worsening of symptoms.

3. Complete the course of medications that are prescribed for the Condition, if any.
4. Benefits and the risks of the medications prescribed were explained.
5. Return to urgicenter or go to ER if there is worsening of the symptoms, or no improvement of the symptoms, otherwise follow up with PCP as needed in the future.
6. Patient was asked to check lab results and/or xray results online if they have signed up for kp.org.

Your Kaiser Permanente Care Instructions

Constipation: After Your Visit

Your Care Instructions

Constipation means that you have a hard time passing stools (bowel movements). People pass stools from 3 times a day to once every 3 days. What is normal for you may be different. Constipation may occur with pain in the rectum and cramping. The pain may get worse when you try to pass stools. Sometimes there are small amounts of bright red blood on toilet paper or the surface of stools. This is because of enlarged veins near the rectum (hemorrhoids).

A few changes in your diet and lifestyle may help you avoid ongoing constipation. Your doctor may also prescribe medicine to help loosen your stool.

Some medicines can cause constipation. These include pain medicines and antidepressants. Tell your doctor about all the medicines you take. Your doctor may want to make a medicine change to ease your

10/07/2014 - Office Visit in URGENT CARE - HARBOR MAC (continued)**Patient Instructions (continued)**

symptoms.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Drink plenty of fluids, enough so that your urine is light yellow or clear like water. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.
- Include high-fiber foods in your diet each day. These include fruits, vegetables, beans, and whole grains.
- Get at least 30 minutes of exercise on most days of the week. Walking is a good choice. You also may want to do other activities, such as running, swimming, cycling, or playing tennis or team sports.
- Take a fiber supplement, such as Citrucel or Metamucil, every day. Start with a small dose and very slowly increase the dose over a month or more.
- Schedule time each day for a bowel movement. A daily routine may help. Take your time having your bowel movement.
- Support your feet with a small step stool when you sit on the toilet. This helps flex your hips and places your pelvis in a squatting position.
- Your doctor may recommend an over-the-counter laxative to relieve your constipation. Examples are Milk of Magnesia and MiraLax. Read and follow all instructions on the label. Do not use laxatives on a long-term basis.

When should you call for help?

Call your doctor now or seek immediate medical care if:

- You have new or worse belly pain.
- You have new or worse nausea or vomiting.
- You have blood in your stools.

Watch closely for changes in your health, and be sure to contact your doctor if:

- Your constipation is getting worse.
- You do not get better as expected.

Patient Instructions (continued)

Tension Headache: After Your Visit

Your Care Instructions

Most headaches are tension headaches. These headaches tend to happen again, especially if you are under stress. A tension headache may cause pain or a feeling of pressure all over your head. You probably can't pinpoint the center of the pain. If you keep getting tension headaches, the best thing you can do to limit them is to find out what is causing them and then make changes in those areas.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Rest in a quiet, dark room with a cool cloth on your forehead until your headache is gone. Close your eyes, and try to relax or go to sleep. Don't watch TV or read. Avoid using the computer.
- Use a warm, moist towel or a heating pad set on low to relax tight shoulder and neck muscles.
- Have someone gently massage your neck and shoulders.
- Take pain medicines exactly as directed.
 - ◆ If the doctor gave you a prescription medicine for pain, take it as prescribed.
 - ◆ If you are not taking a prescription pain medicine, ask your doctor if you can take an over-the-counter medicine.
- Be careful not to take pain medicine more often than the instructions allow, because you may get worse or more frequent headaches when the medicine wears off.
- If you get another tension headache, stop what you are doing and sit quietly for a moment. Close your eyes and breathe slowly. Try to relax your head and neck muscles.
- Do not ignore new symptoms that occur with a headache, such as fever, weakness or numbness, vision changes, or confusion. These may be signs of a more serious problem.

To help prevent headaches

- Keep a headache diary so you can figure out what triggers your headaches. Avoiding triggers may help you prevent headaches. Record when each headache began, how long it lasted, and what the pain was like (throbbing, aching, stabbing, or dull). List anything that may have triggered the headache, such as being physically or emotionally stressed or being anxious or depressed. Other possible triggers are hunger, anger, fatigue, poor posture, and muscle strain.
- Find healthy ways to deal with stress. Headaches are most common during or right after stressful times. Take time to relax before and after you do something that has caused a headache in the past.
- Exercise daily to relieve stress. Relaxation exercises may help reduce tension.
- Get plenty of sleep.
- Eat regularly and well. Long periods without food can trigger a headache.
- Treat yourself to a massage. Some people find that massages are very helpful in relieving tension.
- Try to keep your muscles relaxed by keeping good posture. Check your jaw, face, neck, and shoulder muscles for tension, and try to relax them. When sitting at a desk, change positions often, and stretch for 30 seconds each hour.
- Reduce eyestrain from computers by blinking frequently and looking away from the computer screen every so often. Make sure you have proper eyewear and that your monitor is set up properly, about an arm's length away.

10/07/2014 - Office Visit in URGENT CARE - HARBOR MAC (continued)**Patient Instructions (continued)****When should you call for help?**

Call 911 anytime you think you may need emergency care. For example, call if:

- You have signs of a stroke. These may include:
 - ♦ Sudden numbness, paralysis, or weakness in your face, arm, or leg, especially on only one side of your body.
 - ♦ Sudden vision changes.
 - ♦ Sudden trouble speaking.
 - ♦ Sudden confusion or trouble understanding simple statements.
 - ♦ Sudden problems with walking or balance.
 - ♦ A sudden, severe headache that is different from past headaches.

Call your doctor now or seek immediate medical care if:

- You have new or worse nausea and vomiting.
- You have a new or higher fever.
- Your headache gets much worse.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You are not getting better after 2 days (48 hours).

(none) - all problems resolved or deleted

Smoking Status: Never Smoker

Smokeless Status: Never Used

Comment: non smoker

History Reviewed:

I have reviewed the Medical/Surgical and Social history as displayed in HealthConnect on the date of the encounter or the portion(s) as noted in the progress note.

Review of Systems

Constitutional: Negative for fever, chills and malaise/fatigue.

Skin: Negative.

Clinical Notes (continued)

HENT: Positive for **congestion**. Negative for ear pain and sore throat.

Eyes: Negative.

Cardiovascular: Negative.

Respiratory: Positive for **cough**. Negative for sputum production, shortness of breath and wheezing.

Gastrointestinal: Negative for nausea, vomiting, abdominal pain and diarrhea.

Musculoskeletal: Negative.

Neurological: Negative for dizziness, focal weakness and headaches.

Physical Exam

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

HENT:

Head: Normocephalic and atraumatic.

Right Ear: External ear normal.

Left Ear: External ear normal.

Mouth/Throat: Oropharynx is clear and moist.

Nasal mucosa edema with clear mucous discharge

Eyes: Conjunctivae and EOM are normal. Pupils are equal, round, and reactive to light.

Neck: Normal range of motion. Neck supple.

Cardiovascular: Normal rate, regular rhythm and normal heart sounds.

Pulmonary/Chest: Effort normal and breath sounds normal. No respiratory distress. She has no rales.

Musculoskeletal: Normal range of motion. She exhibits no edema.

Neurological: She is alert and oriented to person, place, and time. Gait normal.

Nursing note and vitals reviewed.

ASSESSMENT:

(460) COMMON COLD (primary encounter diagnosis)

PLAN:

Improving. Contact precautions. Encouraged by mouth liquids.

Healthy diet/exercise discussed.

Preventive Screening Services discussed.

Discussed today's diagnosis and treatments.

The patient verbalized understanding and agreement of the treatment plan.

Patient was advised to RTC PRN

After Visit Summary was given and reviewed.

Patient Instructions

Patient Instructions (continued)

Your Kaiser Permanente Care Instructions

Upper Respiratory Infection (Cold): After Your Visit

Your Care Instructions

An upper respiratory infection, or URI, is an infection of the nose, sinuses, or throat. URIs are spread by coughs, sneezes, and direct contact. The common cold is the most frequent kind of URI. The flu and sinus infections are other kinds of URIs.

Almost all URIs are caused by viruses. Antibiotics won't cure them. But you can treat most infections with home care. This may include drinking lots of fluids and taking over-the-counter pain medicine. You will probably feel better in 4 to 10 days.

The doctor has checked you carefully, but problems can develop later. If you notice any problems or new symptoms, **get medical treatment right away**.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- To prevent dehydration, drink plenty of fluids, enough so that your urine is light yellow or clear like water. Choose water and other caffeine-free clear liquids until you feel better. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.
- Take an over-the-counter pain medicine, such as acetaminophen (Tylenol), ibuprofen (Advil, Motrin), or naproxen (Aleve). Read and follow all instructions on the label.
- If your doctor prescribed antibiotics, take them as directed. Do not stop taking them just because you feel better. You need to take the full course of antibiotics.
- Before you use cough and cold medicines, check the label. These medicines may not be safe for young children or for people with certain health problems.
- Be careful when taking over-the-counter cold or flu medicines and Tylenol at the same time. Many of these medicines have acetaminophen, which is Tylenol. Read the labels to make sure that you are not taking more than the recommended dose. Too much acetaminophen (Tylenol) can be harmful.
- Get plenty of rest.
- Do not smoke or allow others to smoke around you. If you need help quitting, talk to your doctor about stop-smoking programs and medicines. These can increase your chances of quitting for good.

When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

- You have severe trouble breathing.

Call your doctor now or seek immediate medical care if:

- You seem to be getting much sicker.
- You have new or worse trouble breathing.
- You have a new or higher fever.

Patient Instructions (continued)

- You have a new rash.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You have a new symptom, such as a sore throat, an earache, or sinus pain.
- You cough more deeply or more often, especially if you notice more mucus or a change in the color of your mucus.
- You do not get better as expected.

Clinical Notes (continued)

Family Medicine
Harbor-MacArthur Office

Patient presents with:

HAND INJURY - Cut right hand middle finger

Michelle E Tiu is a 38 year old female who presents with above.

Patient presents with injury to right hand middle finger tip, slammed it in a drawer this morning while working. Very painful and it was bleeding. Currently with a bandaid in place and bleeding has stopped but very painful.

Allergies:

Vicodin (Acetaminop* Nausea and/or Vomiting

Smoking Status: Never Smoker

Smokeless Status: Never Used

Comment: non smoker

Alcohol Use: No

Comment:

History Reviewed:

I have reviewed the Medical/Surgical and Social history as displayed in HealthConnect on the date of the encounter or the portion(s) as noted in the progress note.

Physical Exam

Constitutional: She is well-developed, well-nourished, and in no distress. No distress.

BP 120/63 | Pulse 75 | Temp(Src) 98 °F (36.7 °C) (Temporal) | Ht 1.575 m (5' 2") | Wt 50.803 kg (112 lb) | BMI 20.48 kg/m2

Skin: She is not diaphoretic.

Right hand middle finger palmar tip with a small 1mm laceration, very superficial with underlying bruise. Not actively bleeding, tender to palpation. Skin is not separated, no missing skin, skin is aligned well and looks like it is closing on its own. No signs of infection.

Assessment and Plan

CONTUSION (primary encounter diagnosis)

Clinical Notes (continued)

Note: with small 1mm superficial linear laceration, no need for stiches or even steri strips, very superficial. Cleaned wound in clinic with soap and water and placed antibiotic ointment and clean Band-Aid, advised patient to ice it today.

Medications at end of visit:

No outpatient prescriptions have been marked as taking for the 1/15/15 encounter (Office Visit) with Azer, Joanne M.I. (D.O.).

No Facility-Administered Medications for the 1/15/15 encounter (Office Visit) with Azer, Joanne M.I. (D.O.).

Patient Instructions

Your Kaiser Permanente Care Instructions

Upper Respiratory Infection: After Your Visit to the Emergency Room

Your Care Instructions

You were seen in the emergency room for an upper respiratory infection (URI). This is an infection of the nose, sinuses, or throat. Viruses or bacteria can cause URIs. Colds, flu, and sinusitis are examples of URIs. These infections are spread by coughs,

Patient Instructions (continued)

sneezes, and close contact with people who have a URI.

Your doctor may have given you antibiotics to treat the infection if it was caused by bacteria. But antibiotics will not help a viral infection. You can treat most infections with home care. This may include drinking lots of fluids and taking over-the-counter medicine for your symptoms.

Even though you have been released from the emergency room, you still need to watch for any problems. The doctor carefully checked you. But sometimes problems can develop later. If you have new symptoms, or if your symptoms do not get better, **return to the emergency room or call your doctor right away.**

A visit to the emergency room is only one step in your treatment. Even if you feel better, you still need to do what your doctor recommends, such as going to all suggested follow-up appointments and taking medicines exactly as directed. This will help you recover and help prevent future problems.

How can you care for yourself at home?

- To prevent dehydration, drink plenty of fluids, enough so that your urine is light yellow or clear like water. Choose water and other caffeine-free clear liquids until you feel better. If you have kidney, heart, or liver disease and have to limit fluids, talk with your doctor before you increase the amount of fluids you drink.
- Take acetaminophen (Tylenol) or ibuprofen (Advil, Motrin) for fever or pain. Read and follow all instructions on the label.
- If your doctor prescribed antibiotics, take them as directed. Do not stop taking them just because you feel better. You need to take the full course of antibiotics.
- Take cough medicine and a decongestant if your doctor suggests it.
- Get plenty of rest.
- Use saline (saltwater) nasal washes to help keep your nasal passages open and wash out mucus and bacteria. You can buy saline nose drops at a grocery store or drugstore. Or you can make your own at home by mixing ½ teaspoon salt, 1 cup water (at room temperature), and ½ teaspoon baking soda. If you make your own, fill a bulb syringe with the solution, insert the tip into your nostril, and squeeze gently. Blow your nose.
- Use a vaporizer or humidifier to add moisture to the air in your bedroom. Follow the instructions for cleaning it.
- Do not smoke or allow others to smoke around you. If you need help quitting, talk to your doctor about stop-smoking programs and medicines. These can increase your chances of quitting for good.

When should you call for help?**Call 911 if:**

- You have severe trouble breathing.

Return to the emergency room now if:

- You have a fever with stiff neck or a severe headache.
- You have signs of needing more fluids. You have sunken eyes, a dry mouth, and pass only a little dark urine.
- You cannot keep down fluids or medicine.

Call your doctor today if:

- You have a deep cough and a lot of mucus.
- You are too tired to eat or drink.
- You have a new symptom, such as a sore throat, an earache, or a rash.

Michelle E Tiu is a 38 year old female complains of MVA yesterday while driving home. Patient was rear ended while at a traffic light. Air bags did not launch and patient denies any head trauma. Since that time, having severe right neck pain mid back pain. Patient denies chest pain, shortness of breath, dyspnea on exertion, palpitations. Denies any associated headache or neurological or visual changes. Denies any associated radicular symptoms associated.

BP 122/73 | Pulse 66 | Temp(Src) 98.6 °F (37 °C) (Temporal) | Wt 50.1 kg (110 lb 7.2 oz)

History Reviewed:

I have reviewed the Medical/Surgical and Social history as displayed in HealthConnect on the date of the encounter or the portion(s) as noted in the progress note.

Physical Exam

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

Cardiovascular: Normal rate, regular rhythm and normal heart sounds. Exam reveals no gallop and no friction rub.

No murmur heard.

Pulmonary/Chest: Effort normal and breath sounds normal. No respiratory distress. She has no wheezes. She has no rales. She exhibits no tenderness.

Abdominal: Soft. Bowel sounds are normal. She exhibits no distension and no mass. There is no tenderness.

Musculoskeletal:

Cervical back: She exhibits **decreased range of motion**, **tenderness**, **pain** and **spasm**. She exhibits no bony tenderness, no swelling, no edema and no deformity.

Thoracic back: She exhibits **tenderness**, **pain** and **spasm**. She exhibits normal range of motion, no bony tenderness, no swelling, no edema and no deformity.

Lumbar back: Normal. She exhibits normal range of motion, no tenderness, no bony tenderness, no swelling, no edema, no deformity, no pain and no spasm.

Paraspinal cervical and upper trapezius TTP and tightness, no erythema or edema, limited act/pass ROM secondary to pain, negative Spurling's test.

Clinical Notes (continued)

Paraspinal thoracic TTP and tightness, no erythema or edema

Lymphadenopathy:

She has no cervical adenopathy.

Neurological: She is alert and oriented to person, place, and time. No cranial nerve deficit. She has a normal Straight Leg Raise Test.

Lower extremity 5/5 strength with reflexes intact and sensory symmetric

Nursing note and vitals reviewed.

Assessment and Plan:

CAUSE OF INJURY, MVA (primary encounter diagnosis)

NECK MUSCLE STRAIN, INIT

Note: Heat, ice, exercises, stretches education given. Advance activity as tolerated. Patient was instructed and given precautions to return to clinic or go to the Urgent Care or E.R. if symptoms worsen or persist or has any increased concern.

Plan: CYCLOBENZAPRINE 5 MG ORAL TAB

NAPROXEN 500 MG ORAL TAB

KETOROLAC 60 MG/2 ML IM SOLN

KETOROLAC PER 15 MG FOR INJECTION

THORACIC SPINE STRAIN, INIT

Note: Heat, ice, exercises, stretches education given. Patient was instructed and given precautions to return to clinic or go to the Urgent Care or E.R. if symptoms worsen or persist or has any increased concern.

Plan: CYCLOBENZAPRINE 5 MG ORAL TAB

NAPROXEN 500 MG ORAL TAB

KETOROLAC 60 MG/2 ML IM SOLN

KETOROLAC PER 15 MG FOR INJECTION

Your Kaiser Permanente Care Instructions

Whiplash: After Your Visit

Your Care Instructions

Whiplash occurs when your head is suddenly forced forward and then snapped backward, as might happen in a car accident or sports injury. This can cause pain and stiffness in your neck. Your head, chest, shoulders, and arms also may hurt.

Most whiplash gets better with home care. Your doctor may advise you to take medicine to relieve pain or relax your muscles. He or she may suggest exercise and physical therapy to increase flexibility and relieve pain. You may need to wear a neck (cervical) collar to support your neck. For a while you probably will need to avoid lifting and other activities that can strain the neck.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Take pain medicines exactly as directed.
 - ◆ If the doctor gave you a prescription medicine for pain, take it as prescribed.
 - ◆ If you are not taking a prescription pain medicine, ask your doctor if you can take an over-the-counter medicine.
 - ◆ Do not take two or more pain medicines at the same time unless the doctor told you to. Many pain medicines have acetaminophen, which is Tylenol. Too much acetaminophen (Tylenol) can be harmful.
- If your doctor recommends a neck collar, wear it exactly as directed.
- Put ice or a cold pack on your neck for 10 to 20 minutes at a time. Put a thin cloth between the ice and your skin.
- Avoid things that might increase swelling, such as hot showers, hot tubs, or hot packs, for the first 2 days after a neck injury.
- You can use a warm pack or heating pad set on low 2 days after a neck injury if you do not have swelling. Some doctors recommend taking turns between heat and cold.

Patient Instructions (continued)

- Do not do anything that makes the pain worse. Take it easy for a couple of days. You can do your usual activities if they do not hurt your neck or put it at risk for more stress or injury. Avoid lifting, sports, or other activities that might strain your neck.
- Try sleeping on a special neck pillow. Place it under your neck, not under your head. Placing a tightly rolled-up towel under your neck while you sleep will also work. If you use a neck pillow or rolled towel, do not use your regular pillow at the same time.
- Once your neck pain is gone, do exercises to stretch your neck and back and make them stronger. Your doctor or physical therapist can tell you which exercises are best.

When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

- Your arm or leg feels weak or numb.
- You cannot move one or both arms or legs.
- You cannot control your bowels or bladder.

Call your doctor now or seek immediate medical care if:

- Your neck pain keeps you from moving your head.
- Your neck pain is getting worse.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You do not get better as expected.
- Your neck pain comes back after going away for a few days.

Your Kaiser Permanente Care Instructions**Neck Spasm: Exercises****Your Care Instructions**

Here are some examples of typical rehabilitation exercises for your condition. Start each exercise slowly. Ease off the exercise if you start to have pain.

Your doctor or physical therapist will tell you when you can start these exercises and which ones will work best for you.

How to do the exercises

Patient Instructions (continued)

Levator scapula stretch

- Sit in a firm chair, or stand up straight.
- Gently tilt your head toward your left shoulder.
- Turn your head to look down into your armpit, bending your head slightly forward. Let the weight of your head stretch your neck muscles.
- Hold for 15 to 30 seconds.
- Return to your starting position.
- Follow the same instructions above, but tilt your head toward your right shoulder.
- Repeat 2 to 4 times toward each shoulder.

Upper trapezius stretch

- Sit in a firm chair, or stand up straight.
- This stretch works best if you keep your shoulder down as you lean away from it. To help you remember to do this, start by relaxing your shoulders and lightly holding on to your thighs or your chair.
- Tilt your head toward your shoulder and hold for 15 to 30 seconds. Let the weight of your head stretch your muscles.
- If you would like a little added stretch, place your arm behind your back. Use the arm opposite of the direction you are tilting your head. For example, if you are tilting your head to the left, place your right arm behind your back.
- Repeat 2 to 4 times toward each shoulder.

Neck rotation

- Sit in a firm chair, or stand up straight.
- Keeping your chin level, turn your head to the right, and hold for 15 to 30 seconds.
- Turn your head to the left, and hold for 15 to 30 seconds.
- Repeat 2 to 4 times to each side.

Chin tuck

- Lie on the floor with a rolled-up towel under your neck. Your head should be touching the floor.
- Slowly bring your chin toward the front of your neck.
- Hold for a count of 6, and then relax for up to 10 seconds.
- Repeat 8 to 12 times.

Forward neck flexion

1. Sit in a firm chair, or stand up straight.
2. Bend your head forward.
3. Hold for 15 to 30 seconds, then return to your starting position.
4. Repeat 2 to 4 times.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

Your Kaiser Permanente Care Instructions

Healthy Upper Back: Exercises

Your Care Instructions

Here are some examples of exercises for your upper back. Start each exercise slowly. Ease off the exercise if you start to have pain.

Your doctor or physical therapist will tell you when you can start these exercises and which ones will work best for you.

How to do the exercises

Lower neck and upper back stretch

- Stretch your arms out in front of your body. Clasp one hand on top of your other hand.
- Gently reach out so that you feel your shoulder blades stretching away from each other.
- Gently bend your head forward.
- Hold for 15 to 30 seconds.
- Repeat 2 to 4 times.

Midback stretch

Note: If you have knee pain, do not do this exercise.

- Kneel on the floor, and sit back on your ankles.
- Lean forward, place your hands on the floor, and stretch your arms out in front of you. Rest your head between your arms.
- Gently push your chest toward the floor, reaching as far in front of you as possible.
- Hold for 15 to 30 seconds.
- Repeat 2 to 4 times.

Shoulder rolls

- Sit comfortably with your feet shoulder-width apart. You can also do this exercise while standing.
- Roll your shoulders up, then back, and then down in a smooth, circular motion.
- Repeat 2 to 4 times.

Wall push-up

- Stand against a wall with your feet about 12 to 24 inches back from the wall. If you feel any pain when you do this exercise, stand closer to the wall.
- Place your hands on the wall slightly wider apart than your shoulders, and lean forward.

Patient Instructions (continued)

- Gently lean your body toward the wall. Then push back to your starting position. Keep the motion smooth and controlled.
- Repeat 8 to 12 times.

Resisted shoulder blade squeeze

Note: For this exercise, you will need elastic exercise material, such as surgical tubing or Thera-Band.

5. Sit or stand, holding the band in both hands in front of you. Keep your elbows close to your sides, bent at a 90-degree angle. Your palms should face up.
6. Squeeze your shoulder blades together, and move your arms to the outside, stretching the band. Be sure to keep your elbows at your sides while you do this.
7. Relax.
8. Repeat 8 to 12 times.

Resisted rows

Note: For this exercise, you will need elastic exercise material, such as surgical tubing or Thera-Band.

1. Put the band around a solid object, such as a bedpost, at about waist level. Hold one end of the band in each hand.
2. With your elbows at your sides and bent to 90 degrees, pull the band back to move your shoulder blades toward each other. Return to the starting position.
3. Repeat 8 to 12 times.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

Your Xray did not show any fracture or dislocation.

It did show perhaps a muscle spasm... This is why you are finding that the flexiril is helping you the most.

Get some rest and hope you feel better soon

CLINICAL HISTORY: Status post injury rule out FRACTURE

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

Cervical vertebral bodies are normal in height. There is mild reversal of the normal cervical lordosis, possibly due to spasm. No fracture is identified. No significant degenerative changes noted.

The heights of the disc spaces are well preserved.

No significant soft tissue abnormality.

CR 0.70 1/8/2014 3:10 PM

TSH 0.43 12/30/2013 9:59 AM

K 3.9 12/30/2013 9:59 AM

Physical Exam

Constitutional: She is well-developed, well-nourished, and in no distress.

Cardiovascular: Normal rate, regular rhythm, normal heart sounds and intact distal pulses.

No murmur heard.

Pulmonary/Chest: Effort normal and breath sounds normal. No respiratory distress. She has no wheezes.

She has no rales.

Musculoskeletal:

BACK

Inspection of back/posture: Normal

Clinical Notes (continued)

ROM: Flexion/extension/sidebending/rotation: Restricted in extension and rotation/sidebending
Palpation of spine: Mild tenderness to C5-6
Tenderness to bilateral traps / tightness
Some tenderness at thoracolumbar junction T12, L1

Neurologic testing:
Gait: No foot drop
CN II-XII intact
Sensation grossly intact to touch

DTRs intact and symmetrical bilateral lower extremities
Peripheral pulses intact and symmetrical bilateral lower extremities

Neurological: She is alert. Gait normal.
Skin: Skin is warm and dry. She is not diaphoretic.
Psychiatric: Affect normal.
Nursing note and vitals reviewed.

Assessment:
E819.9 CAUSE OF INJURY, MVA (primary encounter diagnosis)
723.1 NECK PAIN
Possible whiplash; advised may continue muscle relaxant; please rest
Massage, ice/heat, stretching
Trial of Ultram given Ibuprofen and Naprosyn not helping
Patient understands this medication is potentially addictive and will only use sparingly
Already has work note

Plan:
Orders Placed This Encounter

- XR CERVICAL SPINE AP LAT AND ODONTOID
- traMADol (ULTRAM) 50 mg Oral Tab

***See patient instruction sheet for further instruction**

Return if symptoms worsen or fail to improve, for Follow up if symptoms not improved with PCP.

Angelique Sporty, DO

CLINICAL HISTORY: Status post injury rule out FRACTURE

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

Cervical vertebral bodies are normal in height. There is mild reversal of the normal cervical lordosis, possibly due to spasm. No fracture is identified. No significant degenerative changes noted. The heights of the disc spaces are well preserved. No significant soft tissue abnormality.

Patient presents with:
LOW BACK PAIN: x8 days post MVA
NECK PAIN: x 8 days post MVA

Clinical Notes (continued)

Michelle E Tiu is a 38 year old female complains of MVA 8 days ago while driving home. Patient was rear ended while at a traffic light. Air bags did not launch and patient denies any head trauma. Since that time, has been seen two times in clinic for neck and back pain and muscle spasms. Given Toradol inj with minimal relief, taking Naprosyn with some relief, tramadol made her too drowsy she states, and flexeril also made her drowsy but it helped her symptoms because felt low back muscles were cramping. Patient states overall her symptoms are improving but feels sharp pains in lower back when working and afraid to take flexeril because of drowsiness.

Patient denies chest pain, shortness of breath, dyspnea on exertion, palpitations. Denies any associated headache or neurological or visual changes. Denies any associated radicular symptoms associated.

Patient requesting work note for day off work tomorrow so she can stay home and ice her back and take the flexeril since unable to take while working.

Allergies:

Vicodin (Acetaminop* Nausea and/or Vomiting

Smoking Status: Never Smoker

Smokeless Status: Never Used

Comment: non smoker

Alcohol Use: No

Comment:

History Reviewed:

I have reviewed the Medical/Surgical and Social history as displayed in HealthConnect on the date of the encounter or the portion(s) as noted in the progress note.

Physical Exam

Constitutional: She is well-developed, well-nourished, and in no distress. No distress.

BP 111/61 | Pulse 99 | Temp(Src) 98.5 °F (36.9 °C) (Temporal) | Wt 51.8 kg (114 lb 3.2 oz)

Pulmonary/Chest: Effort normal.

Musculoskeletal:

Neck: FROM

Lumbar spine: no deformity, no swelling, no palpable spasm, no bone tenderness, + tenderness to palpation over lumbar paraspinal muscles on exam

Skin: Skin is warm and dry. She is not diaphoretic.

Nursing note and vitals reviewed.

Clinical Notes (continued)

Assessment and Plan

NECK PAIN

Note: continue Naprosyn, reviewed XR with patient, likely due to muscle strain associated with spasms, note for work written

LOW BACK PAIN

Note: supportive care and conservative management as above, ice and rest as often as possible

MUSCLE SPASM OF BACK

Note: Continue Cyclobenzaprine as directed for spasms and continue to ice muscles, reassurance provided, if symptoms change or worsen please return to clinic or seek medical care. Patient understands and agrees with plan of care. No new prescriptions written today.

Medications at end of visit:

Outpatient Prescriptions Marked as Taking for the 9/2/15 encounter (Office Visit) with Azer, Joanne M.I. (D.O.), D.O.	
Medication	Sig
- Cyclobenzaprine (FLEXERIL) 5 mg Oral Tab Take 1 tablet by mouth daily at bedtime - Naproxen (NAPROSYN) 500 mg Oral Tab Take 1 tablet by mouth 2 times a day with food as needed for pain

Patient Instructions

Your Kaiser Permanente Care Instructions

Low Back Pain: Exercises

Your Care Instructions

Here are some examples of typical rehabilitation exercises for your condition. Start each exercise slowly. Ease off the exercise if you start to have pain.

Your doctor or physical therapist will tell you when you can start these exercises and which ones will work best for you.

How to do the exercises

10/05/2015 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)****Press-up**

1. Lie on your stomach, supporting your body with your forearms.
2. Press your elbows down into the floor to raise your upper back. As you do this, relax your stomach muscles and allow your back to arch without using your back muscles. As your press up, do not let your hips or pelvis come off the floor.
3. Hold for 15 to 30 seconds, then relax.
4. Repeat 2 to 4 times.

Alternate arm and leg (bird dog) exercise

Note: Do this exercise slowly. Try to keep your body straight at all times, and do not let one hip drop lower than the other.

1. Start on the floor, on your hands and knees.
2. Tighten your belly muscles.
3. Raise one leg off the floor, and hold it straight out behind you. Be careful not to let your hip drop down, because that will twist your trunk.
4. Hold for about 6 seconds, then lower your leg and switch to the other leg.
5. Repeat 8 to 12 times on each leg.
6. Over time, work up to holding for 10 to 30 seconds each time.
7. If you feel stable and secure with your leg raised, try raising the opposite arm straight out in front of you at the same time.

Knee-to-chest exercise

1. Lie on your back with your knees bent and your feet flat on the floor.
2. Bring one knee to your chest, keeping the other foot flat on the floor (or keeping the other leg straight, whichever feels better on your lower back).
3. Keep your lower back pressed to the floor. Hold for at least 15 to 30 seconds.
4. Relax, and lower the knee to the starting position.
5. Repeat with the other leg. Repeat 2 to 4 times with each leg.
6. To get more stretch, put your other leg flat on the floor while pulling your knee to your chest.

Curl-ups

1. Lie on the floor on your back with your knees bent at a 90-degree angle. Your feet should be flat on the floor, about 12 inches from your buttocks.
2. Cross your arms over your chest.
3. Slowly tighten your belly muscles and raise your shoulder blades off the floor.
4. Keep your head in line with your body, and do not press your chin to your chest.
5. Hold this position for 1 or 2 seconds, then slowly lower yourself back down to the floor.
6. Repeat 8 to 12 times.

Pelvic tilt exercise

1. Lie on your back with your knees bent.
2. "Brace" your stomach. This means to tighten your muscles by pulling in and imagining your belly button moving toward your spine. You should feel like your back is pressing to the floor and your hips and pelvis are rocking back.

10/05/2015 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)**

3. Hold for about 6 seconds while you breathe smoothly.
4. Repeat 8 to 12 times.

Heel dig bridging

1. Lie on your back with both knees bent and your ankles bent so that only your heels are digging into the floor. Your knees should be bent about 90 degrees.
2. Then push your heels into the floor, squeeze your buttocks, and lift your hips off the floor until your shoulders, hips, and knees are all in a straight line.
3. Hold for about 6 seconds as you continue to breathe normally, and then slowly lower your hips back down to the floor and rest for up to 10 seconds.
4. Do 8 to 12 repetitions.

Hamstring stretch in doorway

1. Lie on your back in a doorway, with one leg through the open door.
2. Slide your leg up the wall to straighten your knee. You should feel a gentle stretch down the back of your leg.
3. Hold the stretch for at least 15 to 30 seconds. Do not arch your back, point your toes, or bend either knee. Keep one heel touching the floor and the other heel touching the wall.
4. Repeat with your other leg.
5. Do 2 to 4 times for each leg.

Hip flexor stretch

1. Kneel on the floor with one knee bent and one leg behind you. Place your forward knee over your foot. Keep your other knee touching the floor.
2. Slowly push your hips forward until you feel a stretch in the upper thigh of your rear leg.
3. Hold the stretch for at least 15 to 30 seconds. Repeat with your other leg.
4. Do 2 to 4 times on each side.

Wall sit

1. Stand with your back 10 to 12 inches away from a wall.
2. Lean into the wall until your back is flat against it.
3. Slowly slide down until your knees are slightly bent, pressing your lower back into the wall.
4. Hold for about 6 seconds, then slide back up the wall.
5. Repeat 8 to 12 times.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

Your Kaiser Permanente Care Instructions**Neck Spasm: Exercises****Your Care Instructions**

Here are some examples of typical rehabilitation exercises for your condition. Start each exercise slowly. Ease off the exercise if you start to have pain.

Your doctor or physical therapist will tell you when you can start these exercises and which ones will work best for you.

How to do the exercises**Levator scapula stretch**

5. Sit in a firm chair, or stand up straight.
6. Gently tilt your head toward your left shoulder.
7. Turn your head to look down into your armpit, bending your head slightly forward. Let the weight of your head stretch your neck muscles.
8. Hold for 15 to 30 seconds.
9. Return to your starting position.
10. Follow the same instructions above, but tilt your head toward your right shoulder.
11. Repeat 2 to 4 times toward each shoulder.

Upper trapezius stretch

8. Sit in a firm chair, or stand up straight.
9. This stretch works best if you keep your shoulder down as you lean away from it. To help you remember to do this, start by relaxing your shoulders and lightly holding on to your thighs or your chair.
10. Tilt your head toward your shoulder and hold for 15 to 30 seconds. Let the weight of your head stretch your muscles.
11. If you would like a little added stretch, place your arm behind your back. Use the arm opposite of the direction you are tilting your head. For example, if you are tilting your head to the left, place your right arm behind your back.
12. Repeat 2 to 4 times toward each shoulder.

Neck rotation

7. Sit in a firm chair, or stand up straight.
8. Keeping your chin level, turn your head to the right, and hold for 15 to 30 seconds.
9. Turn your head to the left, and hold for 15 to 30 seconds.
10. Repeat 2 to 4 times to each side.

Chin tuck

7. Lie on the floor with a rolled-up towel under your neck. Your head should be touching the floor.

10/05/2015 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)**

8. Slowly bring your chin toward the front of your neck.
9. Hold for a count of 6, and then relax for up to 10 seconds.
10. Repeat 8 to 12 times.

Forward neck flexion

5. Sit in a firm chair, or stand up straight.
6. Bend your head forward.
7. Hold for 15 to 30 seconds, then return to your starting position.
8. Repeat 2 to 4 times.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

TONYA L HARRIS MA

12/15/2015 8:58 AM

CC: urgent appointment

Michelle E Tiu is a 39 year old female

HGBA1C 5.6 09/09/2013

Patient presents with:

EYE EXAMINATION

Patient CC, Comments: Optometrist. Patient says she had a styte that started 2 days ago on the left eyelid. Patient has been doing warm compresses as much as possible since Sunday, but doesn't seem to be helpful. Patient says last night she started to see a mucous head at the lash line, so she squeezed it and a small amount of discharge came out. Patient now feels like the eyelid is much more painful and the pain goes up to her eyebrow. Her friend gave her some azithromycin drops late last night that she started using and took a 1000mg old amoxicillin pill she had last night.

Patient reports history of car accident in high school causing a blowout orbital bone fracture of the left side. Patient has a metal plate and says that her left sinus habitually gets infected on that side. Patient is afraid that she has an orbital cellulitis at this point in the left eye. Patient only wearing 1 contact lens OD because she doesn't have prescription sunglasses. Patient is not light sensitive, but says she is concerned about cosmetic appearance of the eye.

GMO: pt appears healthy and alert

Base Exam

Visual Acuity (Snellen - Linear)

Right

Left

Clinical Notes (continued)

Dist sc		20/125
Dist cc	20/20	

Correction: Contacts

Edited by: Harris, Tonya L (M.A.), M.A.; Shioya, Thu Hoang (O.D.), O.D.

Not recorded

Patient refused NCT.

Visual acuity through autorefractor (-3.50-0.75x 032): OS 20/20-1

Slit Lamp Exam:

C/d 0.30R OD, 0.25R OS
No disc edema OU

Macula flat and homogenous OU

Posterior pole within normal limit OU (non-dilated)

Lids/Adnexa:
OD: no lesions, normal configuration
OS: extreme edema of the upper eyelid; painful on touch.
Conjunctiva/Sclera:

OD: no injection
OS: no injection
Cornea:
OD: clear; patient wearing a soft contact lens with mild deposit
OS: clear

Angles:
OD: 3+
OS: 3+

Anterior Chamber:
OD: no cells or flare, deep
OS: no cells or flare, deep

Lens:
OD: clear
OS: clear

Clinical Notes (continued)

Tonometry: See nursing notes

EOMS: full but OS is lower set compared to the right eye, and slower eye movement in the left eye than the right eye.

Pupils: PERRL, -APD

Assessment: L03.211 LEFT PERIORBITAL CELLULITIS (primary encounter diagnosis)

Plan: Z-Pac for 5 days. Continue with warm compresses. Stop squeezing the lid area to help prevent inflaming the eyelid tissue and prevent the bacteria from going backwards.

Advised to discontinue use of any other oral or topical medications.

Patient taken off work for 3 days due to eyelid pain.

If condition does not improve or becomes worse (increase in redness, discharge, pain, or decrease in vision), patient is advised to call clinic immediately or go to Urgent Center or ER to have on call ophthalmologist paged.

Results and options discussed with patient.

All patient questions answered

Return to Clinic: : 1 week for follow up, or sooner as needed.

Called member and inquired about her request and if I could assist her. She said she prefer to talk to her provider regarding the best way to take time off to care for her mother since her mother have dental surgery every now and then and would like her PCP recommendations regarding best way to take leave without impacting or putting her job at risk. A phone visit was arranged for her to speak with her provider.

Patient Instructions**FOR DRY EYES:**

Use over-the-counter lubricant eye drops 4 to 6 times a day or as needed for comfort. Some common brand names include Systane Ultra, Optive, GenTeal, Refresh Tears, Tears-Naturelle or other lubricant eye drops. Do not use Visine, Naphcon, Vasocon, or Oph-con, or other redness drops as they do not work well.

INSTRUCTIONS FOR WARM COMPRESSES

Use warm water from the faucet or heat water in a pan until hot to the touch, but not hot enough to burn. Place a clean cloth in the hot water. Wring it out so that it is hot and moist (like a barber's towel or for a facial), and place it over the eye or eyes.

Be sure that your eye or eyes are closed before doing this. Continue for at least 10 minutes. Repeat dipping in the hot water and wringing out whenever the cloth becomes cool.

Please apply lid massage to upper/lower eyelids using fingertips to stimulate meibomian glands functioning for better tear quality.

Take dietary supplement Omega-3 1000mg/day or Flaxseed Oil to help with dry eyes and improve tear quality.

Clinical Notes (continued)

DOCTOR'S FIRST REPORT OF OCCUPATIONAL INJURY OR ILLNESS**--- This document is for State Form (DFR) ---**

Michelle E Tiu is a 39 year old right handed female who has worked as a(n) OPTOMETRIST for the past 13 years.

The patient's job responsibilities include light lifting and overhead reaching.

MECHANISM OF INJURY:

Sprain/strain

Regarding Origin of Injury:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Translation required: No

SUBJECTIVE COMPLAINTS:**Treatment History for This Injury:**

Michelle E Tiu states her symptoms started gradually.

The patient was initially seen for the injury by this provider.

Chief Complaint:

SHOULDER INJURY

Nursing notes reviewed by BADI DURAIN JEFFERS DO.

Current Complaints Today:

Upper Extremities: Right shoulder

Right Shoulder: Quality: dull and aching, Timing: constant; Duration: 1 week; Severity: moderate pain and severe pain; Right shoulder pain associated symptoms:: Denies numbness. Relieving Factors: rest and

09/09/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

NSAIDs.

REVIEW OF SYSTEMS:

The patient completed the Regional Review of Systems Questionnaire and I reviewed.

General: No fever, chills, or sweats

Eyes: No eye pain, blurry vision, double vision, or visual disturbances

Ears, Nose, Throat, and Mouth: No pain, hearing loss, or ear ringing

Cardiovascular: No chest pain or palpitations

Respiratory: No wheezing, cough, or shortness of breath

Gastrointestinal: No nausea, vomiting, or abdominal pain and No rectal bleeding or black stools

Genitourinary: No painful urination and No blood in urine

Skin: No rash, redness, or swelling

Neurologic: No headache and No numbness or tingling of extremities

Psychiatric: No anxiety or depression

Hematology: No easy bruising or bleeding

Allergy: No known environmental allergies

Extended Musculoskeletal:

I reviewed with the patient the following extended musculoskeletal systems.

Past Medical, Family, and Surgical History:

Reviewed Electronic Medical Records: Yes

Patient did not have a prior work related injury to the same body part(s).

Patient did not have a prior non-work related injury to the same body part(s).

Family History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

Past Surgical History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

SOCIAL HISTORY:

Work Status before this visit: Full Duty

Claim Information: pending.

OBJECTIVE FINDINGS:

Vital Signs:

BP 107/70 mmHg | Pulse 60 | Temp(Src) 97.8 °F (36.6 °C) (Temporal) | Ht 1.568 m (5' 1.75") | Wt 49.1 kg (108 lb 3.9 oz) | BMI 19.97 kg/m2

I confirm that I have performed the following examination(s):

PHYSICAL EXAMINATION:

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

09/09/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****HENT:**

Head: Normocephalic and atraumatic.

Eyes: EOM are normal. Pupils are equal, round, and reactive to light.

Cardiovascular: Intact distal pulses.

Pulmonary/Chest: Effort normal and breath sounds normal. No respiratory distress.

Abdominal: Soft. She exhibits no distension. There is no tenderness.

Musculoskeletal:

Right shoulder: She exhibits decreased range of motion, tenderness and pain. She exhibits no swelling.

Cervical back: She exhibits normal range of motion, no tenderness, no swelling and no pain.

Neurological: She is alert and oriented to person, place, and time. She has normal sensation and normal reflexes. Coordination normal.

Skin: Skin is warm and dry.

Psychiatric: Mood and affect normal.

Nursing note and vitals reviewed.

X-ray and laboratory ordered today:**DIAGNOSIS:**

M75.81 TENDINITIS OF RIGHT SHOULDER

There is no evidence of chemical or toxic compounds being involved.

ARE YOUR FINDINGS AND DIAGNOSIS CONSISTENT WITH PATIENT'S ACCOUNT OF INJURY OR ONSET OF ILLNESS?

Yes

IS THERE ANY OTHER CURRENT CONDITON THAT WILL IMPEDE OR DELAY PATIENT'S RECOVERY?

No

TREATMENT RENDERED:

Michelle E Tiu has been advised to continue the following previous medication(s):

The medication(s)/supplies/radiological studies ordered this visit:

Sig: 1 TAB PO Q8H WITH FOOD PRN PAIN

Dispense: 60

Refill: 0

Work comp

Order Specific Question: Is this medication for a workers' compensation condition?

Answer: Yes

Regarding Treatment and Supplies:

1. Request authorization for ergonomic work station evaluation.
2. Request authorization for Physical therapy evaluation and treat 2x/week x 3 weeks.
3. The patient is advised to apply ice or cold packs intermittently as needed to relieve pain.
4. Modified duty.
5. Motrin prescribed. The patient was advised that NSAID-type medications have two very important potential side effects: gastrointestinal irritation including hemorrhage and renal injuries. She was asked to take the medication with food and to stop if she experiences any GI upset. I asked her to call for vomiting, abdominal pain or black/bloody stools. The patient expresses understanding of these issues and questions were answered.

IF FURTHER TREATMENT REQUIRED, SPECIFY TREATMENT PLAN/ESTIMATED DURATION: More than likely the patient's condition is expected to improve or reach maximum medical improvement or full recovery in week(s).

IF HOSPITALIZED AS INPATIENT, GIVE HOSPITAL NAME, LOCATION, AND DATE ADMITTED:

no

WORK STATUS:

See Below

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan

Chief Complaint:

No chief complaint on file.

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

09/15/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****TREATMENT PROGRESS:**

The patient's symptoms from the previous visit are:
Unchanged

Regarding Treatment Since Last Visit:

States she is awaiting ergonomic evaluation because does not feel her work station is set up appropriately. Indicates 3 other optometrists in her building are also having shoulder issues. Reports she just started physical therapy.

Michelle E Tiu is a 39 year old female with the following subjective factors:

Regarding Patient Complaints:

Michelle E Tiu is a 39 year old right handed female with right shoulder pain and discomfort. Right shoulder pain unchanged and is moderate to severe constant.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

PHYSICAL EXAMINATION:

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

Cardiovascular: Intact distal pulses.

Musculoskeletal:

Right shoulder: She exhibits decreased range of motion, tenderness and pain. She exhibits no swelling.

Neurological: She is alert and oriented to person, place, and time. She has normal sensation and normal reflexes. She exhibits normal muscle tone.

Skin: Skin is warm and dry.

09/15/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Psychiatric: Affect and judgment normal.
Nursing note and vitals reviewed.

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYSICIANS SPECIAL REPORT, PR-2 TREATING PHYSICIAN'S PROGRESS REPORT

Meloxicam (MOBIC) 7.5 mg Oral Tab

Sig: 1 TAB PO DAILY WITH FOOD. MAY INCREASE TO 2 TABS PO DAILY PRN PAIN OR INFLAMMATION

Dispense: 30

Refill: 0

Work comp

Order Specific Question: Is this medication for a workers' compensation condition?

Answer: Yes

Regarding Treatment Rendered:

1. Awaiting ergonomic work station evaluation.
2. Continue physical therapy.
3. Mobic prescribed. The patient was advised that NSAID-type medications have two very important potential side effects: gastrointestinal irritation including hemorrhage and renal injuries. She was asked to take the medication with food and to stop if she experiences any GI upset. I asked her to call for vomiting, abdominal pain or black/bloody stools. The patient expresses understanding of these issues and questions were answered.

This report is billable due to a change in treatment plan or work restrictions and/or diagnosis or treating under future medical care and last visit was more than 45 days.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

09/15/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****Work Status:**

Modified Work (Applies to work and home): This patient is placed on modified activity at work (if available) and at home from 9/15/2016 through 9/26/2016

Other Needs/Restrictions: No repetitive reaching with right arm no more than 30 minutes each hour. Needs ergonomic work station evaluation.

Additional Comments: Michelle E Tiu was released from our office on 9/15/2016 at 9:23 AM and has a follow up appointment on 09/26/16 at 2:00PM.

Patient has been advised to arrive 15 minutes prior to her appointment time.

Since last visit her pain is better since at physical therapy. She is not taking medication for pain, since mobic causes GI upset.

Currently, the patient points to indicate:

right shoulder and trap pain that is aching. Pain is rated at 2-4/10 (1=min & 10= max), intermittent.

Aggravated by: any abduction, movement over chest level

Alleviated by: physical therapy, rest

Associated signs and symptoms:

09/26/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats
Gastrointestinal: No nausea, vomiting, or abdominal pain
Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, not working, not accommodated

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant
Cardiovascular: Normal pulse and rhythm
Respiratory: No respiratory distress
Neurological: No muscle wasting, tremor, or coordination deficits
Psychiatric: Pleasant, alert, no distress, mood and affect normal

Regarding Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation right posterior shoulder, right upper trap, right occiput

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right , 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender to palpation at right post shoulder, right trap

09/26/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Non tender to palpation ac, grtr tub
Active range of motion
Flexion 170deg
Abduction 160deg
External rotation 60deg
Internal rotation T8
(-) Hawkins
(-) Neers
(-) painful arc

NEURO

Normal sensation
DTR 2+ bic, tri bilateral

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER (primary encounter diagnosis)

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYSICIANS SPECIAL REPORT, PR-2 TREATING PHYSICIAN'S PROGRESS REPORT
REFERRAL PHYSICAL THERAPY / OCCUPATIONAL THERAPY

Order Comments:

Reason: physical therapy 2/week x 3 weeks = 6 treatments

For range of motion, modalities, therapeutic exercise, progress to home exercise program
(M75.81) TENDINITIS OF RIGHT SHOULDER

Referral Priority: Routine

Referral Type: Outpatient Service

Referral Reason: Specialty Services Required

Referral Location: *ORANGE COUNTY

Regarding Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 39 year old female who presents with complaints of right shoulder pain that she relates to an incident at work.

History and physical examination was consistent with
Right shoulder impingement, improved

PLAN:

09/26/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request for additional physical therapy placed, to progress to/establish home exercise program .

Ergonomic assessment of workstation to be completed

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

May return to work modified activity level, graduated hours, with planned return to work usual and customary tasks 10/24/2016

Follow up in 3-4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan and Change in work status

09/29/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****Chief Complaint:**

SHOULDER PAIN

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Gradually improving and Improving

Michelle E Tiu is a 39 year old female with the following subjective factors:

Regarding Patient Complaints:

Since last visit her pain is better since at physical therapy, except she is more sore immediately after the treatment. She gets a shooting pain in the back of her neck and head as well. She is not taking medication for pain, since mobic causes GI upset.

Currently, the patient points to indicate:

right shoulder and trap pain that is aching. Pain is rated at 2-6/10 (1=min & 10= max), intermittent.

Aggravated by: any abduction, movement over chest level

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

09/29/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, not working, not accommodated

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Regarding Objective Findings:

Cervical spine

Stance: protracted neck

Marked tender to palpation right posterior shoulder, right upper trap, right occiput

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right , 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender to palpation at right post shoulder, right trap

Non tender to palpation ac, grtr tub

Active range of motion

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Clinical Notes (continued)

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Unchanged

Regarding Treatment Since Last Visit:

States she is not improving with physical therapy and acupuncture treatment and is very concerned. She is requesting evaluation by Ortho shoulder specialist.

Michelle E Tiu is a 39 year old female with the following subjective factors:

Regarding Patient Complaints:

Michelle E Tiu is a 39 year old right handed female with right shoulder pain and discomfort. Right shoulder pain unchanged and is moderate to severe constant. States her right shoulder pain increases after about 15 minutes of driving or when she reaches with her right arm.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

PHYSICAL EXAMINATION:

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

Cardiovascular: Intact distal pulses.

Musculoskeletal:

Right shoulder: She exhibits decreased range of motion, tenderness and pain. She exhibits no swelling.

Clinical Notes (continued)

Neurological: She is alert and oriented to person, place, and time. She has normal sensation and normal reflexes. She exhibits normal muscle tone.

Skin: Skin is warm and dry.

Psychiatric: Affect and judgment normal.

Nursing note and vitals reviewed.

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Patient Instructions

Dear Michelle E Tiu

It was a pleasure to meet you today. My staff and I would like to thank you for taking the time to come in today and allowing us to contribute to your care. We work hard to make all of your visits a pleasant and informative experience and we strive to give each member the attention they deserve. We take our service to you very seriously and thank you for the opportunity to let us help you.

If you have any questions after your visit please feel free to contact our office anytime by calling the call center at 888-988-2800 or by using our website KP.Org Did you know? If you register at KP.ORG, you can order refills, view most lab test results, make appointments, and send secure encrypted messages directly to your doctor. Sign up today!

With Gratitude,
Orthopedic Dept

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan and Change in work status

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Gradually improving and Improving

Michelle E Tiu is a 39 year old female with the following subjective factors:

Regarding Patient Complaints:

Since last visit her pain is much better since at acupuncture, and has done a 1 treatment at one clinic, and 3 at another clinic. The shooting pain in the back of her neck and head is gone. She is not taking medication for pain, since mobic causes GI upset. She is much better and feels she can return to work usual and

10/14/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

customary tasks.

Currently, the patient points to indicate:
right shoulder and trap pain that is aching. Pain is rated at 2/10 (1=min & 10= max), intermittent.

Aggravated by: any abduction, movement over chest level
Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, not working, not accommodated

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Regarding Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation right posterior shoulder, right upper trap

10/14/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Not tender to palpation midline
Active range of motion
Flexion chin to chest, extension 40 deg
Rotation 75 deg right , 75 deg left

Referral Location: *ORANGE COUNTY

10/14/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Number of Visits Requested: 1

REQUEST FOR AUTHORIZATION (OHS USE ONLY)

Order Comments:

REQUEST FOR ACUPUNCTURE

Reason: acupuncture 1-2/week x 3-6 weeks = 6 treatment for pain and spasm management

For diagnosis:

(M75.81) TENDINITIS OF RIGHT SHOULDER

(M79.1) CERVICAL MYOFASCIAL PAIN SYNDROME

Acupuncture - per MTUS to hasten functional recovery and as medication is being reduced since not well tolerated:

'§ 9792.24.1. Acupuncture Medical Treatment Guidelines.

(1) œAcupuncture is used as an option when pain medication is reduced or not tolerated, it may be used as an adjunct to physical rehabilitation and/or surgical intervention to hasten functional recovery...

Acupuncture can be used to reduce pain, reduce inflammation, increase blood flow, increase range of motion, decrease the side effect of medication-induced nausea, promote relaxation in an anxious patient, and reduce muscle spasm.'

Referral Priority: Routine

Referral Type: Occupational Health

Referral Reason: Administrative

Expiration Date: 1/12/2017

Regarding Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 39 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with

Right shoulder impingement, improved

Cervical myofascial pain, improved

PLAN:

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request for additional physical therapy placed prior visit , to address myofascial release, scap stabilizers, to/establish home exercise program, support return to work usual and customary tasks (repetitive chest level and above reaching)

Request placed for additional acupuncture to manage pain, spasm, support return to work usual and customary tasks

Ergonomic assessment of workstation to be completed, report pending

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

May return to work usual and customary tasks 10/15/2016

Follow up in 3-4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

10/14/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status

Modified Work (Applies to work and home): This patient is placed on modified activity at work (if available) and at home from 10/14/2016 through 10/14/2016

ALLOWED:

Reach above right shoulder: Not at all.

Lift/Carry/Push/Pull no more than 5 pounds

Concurrent Treatment: PT/OT

Other Needs/Restrictions: No reaching with right arm.

Needs adjustable work station to adjust for height.

Additional Comments: Michelle E Tiu was released from our office on 10/14/2016 at 3:01 PM and has a follow up appointment on 11/3/16 at 10:10am. Patient has been advised to arrive 15 minutes prior to her appointment time.

If you have any questions, please call our office at the following numbers:

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Gradually improving and Improving

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she did return to work usual and customary tasks, but now with some symptom recurrence. Some of her right shoulder and trap discomfort is recurring because the room she is assigned to uses a mirror system that requires her to lift the arm repetitively overhead as described in mechanism of injury above. Outside ergonomic assessment of workstation report did make recommendations that have not been implemented, apparently secondary to cost.

She is continuing acupuncture once a week, and additional physical therapy to restart for strengthening. The shooting pain in the back of her neck and head is gone, but pain over right deltoid persists. She is not taking medication for pain.

Currently, the patient points to indicate:

right posterolateral shoulder that is aching. Pain is rated at 0-5/10 (1=min & 10= max), intermittent.

Aggravated by: any abduction, repetitive movement over chest level, (+) pain to lay on right shoulder at night

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

11/03/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with
Right shoulder impingement, recurrent
Cervical myofascial pain, improved

PLAN:

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue/start additional physical therapy, to address myofascial release, scap stabilizers, to/establish home exercise program, support return to work usual and customary tasks (repetitive chest level and above reaching)

Continue additional acupuncture to manage pain, spasm, support return to work usual and customary tasks
Ergonomic assessment of workstation completed, recommendations to be implemented; have asked KP ergonomics to review recommendations from outside for feasibility

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.
May continue return to work usual and customary tasks

Follow up in 3-4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Author Type: Physician

Encounter Date: 11/6/2016

Creation Time: 11/6/2016 1:34 PM

Editor: Phillips, Gregory Lamar (M.D.), M.D. (Physician)

History:

Patient presents with:

VOMITING: every 5 mins x today

DIZZY: today

Patient presents complaining of a 6 hour history of persistent nausea and emesis after excessive alcohol intake with intermittent burning epigastric pain. She now complains of dizziness as well.

History Reviewed:

I have reviewed the Medical/Surgical history as displayed in HealthConnect on the date of the encounter or the portion(s) as noted in the progress note.

Review of Systems

Constitutional: Negative for fever and chills.

Cardiovascular: Negative for chest pain.

Respiratory: Negative for cough and shortness of breath.

Gastrointestinal: Negative for diarrhea and blood in stool.

Physical Exam

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

HENT:

Head: Normocephalic and atraumatic.

Cardiovascular: Normal rate and regular rhythm.

Pulmonary/Chest: Effort normal and breath sounds normal.

Abdominal: Soft. There is no tenderness.

Musculoskeletal: She exhibits no edema.

Neurological: She is alert and oriented to person, place, and time.

Vitals reviewed.

Filed on: 03/17/20 1833
Resulting lab: WLA MEDICAL CENTER LABORATORY

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	0.68	<=1.10 mg/dL	—	305
GLOMERULAR FILTRATION RATE	>89	mL/min/BSA	—	305

Comment:
Estimated GFR (eGFR) is normalized to a standard body surface area (BSA, 1.73m2), by sex, age, and race. The eGFR has been multiplied by 1.21 if "Black" race is reported in Foundations System.

-GFR Ranges-
GFR >89 Normal (or CKD1*)
60-89 Mildly reduced (CKD2*)
30-59 Moderately reduced (CKD3 if >3mos)
15-29 Severely reduced (CKD4 if >3mos)
GFR <15 Kidney failure (CKD5 if >3mos)

11/06/2016 - Office Visit in URGENT CARE - WEST LA (continued)

Labs (continued)

* GFR >60 is not diagnostic of CKD1 or 2 unless another marker of kidney damage is present (e.g. microalbumin or urine protein >300 mg/day on 2 occasions, or renal biopsy or imaging abnormality).

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

11/28/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Treatment:
NSAIDS
Ice
Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Gradually improving and Improving

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, but with some symptom recurrence after a very busy day at work 11/21/2016 . She felt better after acupuncture, then very sore the next day.

Recall, she feels her right shoulder and trap discomfort is recurring because the room she is assigned to uses a mirror system that requires her to lift the arm repetitively overhead as described in mechanism of injury above.

They have not completed the modifications of the work station recommended by outside ergonomic assessment of workstation eval. Awaiting ergonomic assessment of workstation eval internally as well

She is continuing acupuncture once a week, and additional physical therapy to restart for strengthening. The shooting pain in the back of her neck and head is gone, but pain over right deltoid persists. She is not taking medication for pain.

Currently, the patient points to indicate:
right posterolateral shoulder that is aching. Pain is rated at 0-2/10 (1=min & 10= max), intermittent.

Aggravated by: any abduction, repetitive movement over chest level, (+) pain to lay on right shoulder at night
Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

11/28/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****REVIEW OF SYSTEMS:**

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, not working, not accommodated

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation right upper trap with associated trigger point

Not tender to palpation midline

Active range of motion

M79.1 CERVICAL MYOFASCIAL PAIN SYNDROME

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This EncounterPHYSICIANS SPECIAL REPORT, PR-2 TREATING PHYSICIAN'S PROGRESS REPORTREFERRAL PHYSICAL THERAPY / OCCUPATIONAL THERAPY

Order Comments:

Reason: physical therapy 1-2/week x 3-6 weeks = 6 treatments

For range of motion, modalities, therapeutic exercise, scap stabilizers, myofascial release, correct recruitment of upper trap to abduct

(M75.81) TENDINITIS OF RIGHT SHOULDER

(M79.1) CERVICAL MYOFASCIAL PAIN SYNDROME

Referral Priority: Routine

Referral Type: Outpatient Service

Referral Reason: Specialty Services Required

Referral Location: *ORANGE COUNTY

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with

Right shoulder impingement

Cervical myofascial pain, improved

PLAN:

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request placed for additional physical therapy, to address myofascial release, scap stabilizers, correct upper trap recruitment, to/establish home exercise program, support return to work usual and customary tasks

11/28/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

(repetitive chest level and above reaching)

Continue additional acupuncture to manage pain, spasm, support return to work usual and customary tasks
Ergonomic assessment of workstation completed, recommendations to be implemented; have asked KP ergonomics to review recommendations from outside for feasibility

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.
May continue return to work usual and customary tasks

Follow up in 3-4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

History:

Michelle E Tiu is a 40 year old female

Atoian, Ani Ardashian (M.D.)

Patient presents with:

12/06/2016 - Office Visit in FAMILY PRACTICE (continued)

Clinical Notes (continued)

ABDOMINAL DISCOMFORT: x 1 month after eating worse per pt

HISTORY OF PRESENT ILLNESS:

- complains of "soreness" in the right upper quadrant/epigastric area x 1 month, intermittent. Not sure if it's any worse after foods. Has been drinking more caffeine lately. Feels the soreness if she presses on that area. Denies weight loss, nausea, vomiting, diarrhea. Denies reflux or heartburn.
- friend died of bile duct cancer so she is worried about this

Patient Active Problem List:

DEPRESSION, UNSPECIFIED
ANXIETY
SIBLING RELATION PROBLEM
TENDINITIS OF RIGHT SHOULDER

No outpatient prescriptions have been marked as taking for the 12/6/16 encounter (Office Visit) with McIver, Andreea Ligia (D.O.), D.O..

ALLERGIES

Vicodin (Acetaminop* Nausea and/or Vomiting

12/06/2016 - Office Visit in FAMILY PRACTICE (continued)

Clinical Notes (continued)

History Reviewed:

I have reviewed the Medical/Surgical and Social history as displayed in HealthConnect on the date of the encounter or the portion(s) as noted in the progress note.

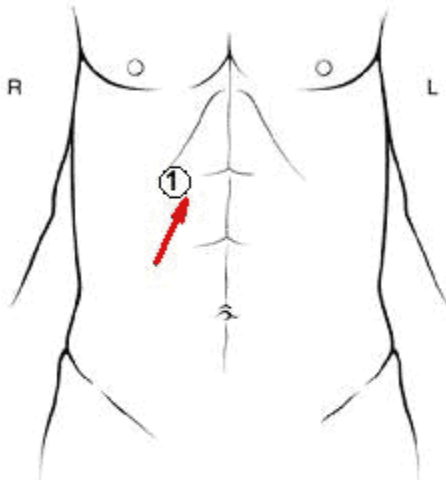

Physical Exam

Constitutional: She is well-developed, well-nourished, and in no distress. No distress.

HENT:

Head: Normocephalic and atraumatic.

Abdominal: Soft. Bowel sounds are normal. She exhibits no distension and no mass. There is no tenderness. There is no rebound, no guarding, no tenderness at McBurney's point and negative Murphy's sign.

1: Reports "soreness" with palpation over area indicated

Patient constantly rubbing the area

Musculoskeletal: Normal range of motion.

Neurological: She is alert. Gait normal.

Skin: Skin is warm and dry. She is not diaphoretic.

Nursing note and vitals reviewed.

ASSESSMENT/PLAN:

GASTRITIS

12/06/2016 - Office Visit in FAMILY PRACTICE (continued)**Clinical Notes (continued)**

Note: suspect either gastritis or muscular strain. Recommend tylenol with food as needed for one week, daily prilosec. Follow up Telephone Appointment in 1 week. Avoid rubbing the area.

Plan: OMEPRAZOLE 20 MG ORAL CPDR SR CAP

ACETAMINOPHEN 325 MG ORAL TAB

Orders Placed This Encounter

- Omeprazole (PRILOSEC) 20 mg Oral CPDR SR Cap
- Acetaminophen (TYLENOL) 325 mg Oral Tab

Patient Instructions given as After Visit Summary.

Verbal Instructions given to patient.

Required follow-up regarding today's visit were discussed. Patient was advised to return for re-evaluation if symptoms persisted or worsened.

Physical Exam

Constitutional: She is well-developed, well-nourished, and in no distress.

HENT:

Head: Normocephalic and atraumatic.

Eyes: Conjunctivae are normal.

Pulmonary/Chest: Effort normal.

Abdominal: Soft. Bowel sounds are normal. She exhibits no distension and no mass. There is no tenderness. There is no rebound.

Neurological: She is alert.

Skin: Skin is warm and dry.

Psychiatric: Affect normal.

Nursing note and vitals reviewed.

ASSESSMENT/PLAN:

GERD (GASTROESOPHAGEAL REFLUX DISEASE)

ANXIETY: reassured patient symptoms are consistent with GERD/gastritis. Differential diagnosis include muscle strain. Only time will tell if her symptoms will resolve. Omeprazole takes at least 2 weeks to work. Advised over the counter maalox when she has discomfort and if it helps, it would be reassuring. She is worried as her best friend was diagnosed with biliary duct cancer. Dietary changes also advised.

Patient Instructions**Your Kaiser Permanente Care Instructions****Gastroesophageal Reflux Disease (GERD): Care Instructions****Your Care Instructions**

Gastroesophageal reflux disease (GERD) is the backward flow of stomach acid into the esophagus. The esophagus is the tube that leads from your throat to your stomach. A one-way valve prevents the stomach acid from moving up into this tube. When you have GERD, this valve does not close tightly enough. If you have mild GERD symptoms including heartburn, you may be able to control the problem with antacids or over-the-counter medicine. Changing your diet, losing weight, and making other lifestyle changes can also help reduce symptoms.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Take your medicines exactly as prescribed. Call your doctor if you think you are having a problem with your medicine.
- Your doctor may recommend over-the-counter medicine. For mild or occasional indigestion, antacids, such as Tums, Gaviscon, Mylanta, or Maalox, may help. Your doctor also may recommend over-the-counter acid reducers, such as Pepcid AC, Tagamet HB, Zantac 75, or Prilosec. Read and follow all instructions on the label. If you use these medicines often, talk with your doctor.
- Change your eating habits.
 - ◆ It's best to eat several small meals instead of two or three large meals.
 - ◆ After you eat, wait 2 to 3 hours before you lie down.
 - ◆ **Chocolate, mint, and alcohol can make GERD worse.**
 - ◆ **Spicy foods, foods that have a lot of acid (like tomatoes and oranges), and coffee can make GERD symptoms worse in some people. If your symptoms are worse after you eat a certain food, you may want to stop eating that food to see if your symptoms get better.**
- Do not smoke or chew tobacco. Smoking can make GERD worse. If you need help quitting, talk to your doctor about stop-smoking programs and medicines. These can increase your chances of quitting for good.
- If you have GERD symptoms at night, raise the head of your bed 6 to 8 inches by putting the frame on blocks or placing a foam wedge under the head of your mattress. (Adding extra pillows does not work.)
- Do not wear tight clothing around your middle.
- Lose weight if you need to. Losing just 5 to 10 pounds can help.

When should you call for help?

Call your doctor now or seek immediate medical care if:

- You have new or different belly pain.

12/08/2016 - Office Visit in INTERNAL MEDICINE (continued)**Patient Instructions (continued)**

- Your stools are black and tarlike or have streaks of blood.

Watch closely for changes in your health, and be sure to contact your doctor if:

- Your symptoms have not improved after 2 days.
- Food seems to catch in your throat or chest.

Where can you learn more?

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Gradually improving and Improving

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with follow up ergonomic assessment of workstation completed, recommendations completed, and ergonomic modifications of work station to be completed. She is frustrated with the employer not really addressing the work ergonomics situation

She generally feels better after acupuncture, but symptoms recur with return to work, when she uses a mirror system that requires her to lift the arm repetitively overhead. She also gets some help with yoga. She has an additional 6 session physical therapy to attend.

She is continuing acupuncture once a week, and additional physical therapy to restart for strengthening. The shooting pain in the back of her neck and head is gone, but pain over right deltoid persists. She is not taking medication for pain.

Currently, the patient points to indicate:

right posterolateral shoulder that is aching. Pain is rated at 0-2/10 (1=min & 10= max), intermittent.

Aggravated by: any abduction, repetitive movement over chest level, (+) pain to lay on right shoulder at night

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsava pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

12/15/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, not working, not accommodated

OBJECTIVE FINDINGS:

Vital Signs:

LMP 11/24/2016

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation right upper trap with associated trigger point

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right , 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender to palpation at right post shoulder, right grtr tub

Non tender to palpation ac, grtr tub, right upper trap

Active range of motion

Flexion 160deg

Abduction 160deg

External rotation 60deg

Internal rotation T8

(-) Hawkins

(-) Neers

(-) painful arc

NEURO

Normal sensation

DTR 2+ bic, tri bilateral

12/15/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****DIAGNOSES:**

M75.81 TENDINITIS OF RIGHT SHOULDER (primary encounter diagnosis)

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYSICIANS SPECIAL REPORT, PR-2 TREATING PHYSICIAN'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with

Right shoulder impingement

Cervical myofascial pain, improved

PLAN:

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue additional physical therapy, to address myofascial release, scap stabilizers, correct upper trap recruitment, to/establish home exercise program, support return to work usual and customary tasks (repetitive chest level and above reaching)

Complete additional acupuncture to manage pain, spasm, support return to work usual and customary tasks
After discussing treatment options, patient requested right upper trapezius trigger point injection. Discussed potential risks with cortisone injection, including but not limited to, infection, bleeding, recurrence of symptoms and ultimate need for further injections and/or surgical procedure. After obtaining verbal informed consent, procedure was undertaken without complications this date. See note below for details.

Ergonomic assessment of workstation completed, recommendations to be implemented; have asked KP ergonomics to review recommendations from outside for feasibility

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

May continue return to work usual and customary tasks

Follow up in 3-4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The

12/15/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

PROCEDURE NOTE:

Discussed potential risks with cortisone injection, including but not limited to, infection, bleeding, recurrence of symptoms and ultimate need for further injections and/or surgical procedure. Patient shows understanding of these risks and wished to proceed with right upper trapezius trigger point injection.

Following sterile preparation, 4mL plain 1% lidocaine (NDC 0409-4276-02) was injected into right upper trapezius trigger point using a PA approach.

Injection site was dressed with adhesive covering. Patient tolerated procedure well, noted reduced pain, and was advised to seek medical care if any signs of infection. Will return for repeat injection or recurrent symptoms as needed.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status:

Full work today.

Other Needs/Restrictions:

Additional Comments: .Michelle E Tiu was released from our office on 12/15/2016 at 5:33 PM and has a follow up appointment on 12/28/16 at 3:40pm. Patient has been advised to arrive 15 minutes prior to her appointment time.

If you have any questions, please call our office at the following numbers:

Procedure Orders
1. MAMMO BILAT SCREENING SEQUENTIAL [1104999542] ordered by Atoian, Ani Ardashian (M.D.), M.D. at 12/23/16 0810
- MAMMO SCREENING BILAT SEQUENTIAL WO COMPUTER AIDED DETECTION ANALYSIS
BILATERAL DIGITAL SCREENING MAMMOGRAM SEQUENTIAL ORDER: 3/20/2017
CLINICAL: Baseline digital screening mammogram. No complaints.
No prior exams were available for comparison.
The tissue of both breasts is extremely dense, which lowers the sensitivity of mammography.

12/23/2016 - Office Visit in FAMILY PRACTICE (continued)**Clinical Notes (group 1 of 2) (continued)**

No significant masses, calcifications, or other findings are seen in either breast.

IMPRESSION: NEGATIVE

There is no mammographic evidence of malignancy. A routine screening mammogram is recommended within 2 years.

Kaiser Permanente regional guidelines recommend annual screening mammography for high risk patients and screening mammography within 2 years for normal low risk patients. Determination of risk assessment by radiology is limited and ultimately should be determined by the patient's primary care provider in collaboration with the patient.

Mammograms do not detect all breast cancer. Up to 15 percent of breast cancer can't be detected by mammography. Patients with palpable abnormalities may require further investigation.

Disposition and Responsibility

A letter with these results will be sent to the patient by the Mammography Department.

Collected by: Ponce,Jessica O 03/20/17 0852

Resulting lab: SCPMG REGIONAL REFERENCE
LABORATORIES, CLINICAL PATHOLOGY - CHINO HILLS

Narrative:

RMS ACCN: 605015163

Acknowledged by: Atoian, Ani Ardashian (M.D.), M.D. on 03/20/17 1849

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	0.74	<=1.10 mg/dL	—	SCPMG
GLOMERULAR FILTRATION RATE	87	mL/min/BSA	—	SCPMG
Comment: Estimated GFR (eGFR) is normalized to a standard body surface area (BSA, 1.73m2), by sex, age, and race. The eGFR has been multiplied by 1.21 if "Black" race is reported in Foundations System.				
-GFR Ranges-				
GFR >89 Normal (or CKD1*)				
60-89 Mildly reduced (CKD2*)				
30-59 Moderately reduced (CKD3 if >3mos)				
15-29 Severely reduced (CKD4 if >3mos)				
GFR <15 Kidney failure (CKD5 if >3mos)				
* GFR >60 is not diagnostic of CKD1 or 2 unless another marker of kidney damage is present (e.g. microalbumin or urine protein >300 mg/day on 2 occasions, or renal biopsy or imaging abnormality).				
RACE	Non Black	—	—	SCPMG

LABORATORIES, CLINICAL PATHOLOGY - CHINO HILLS

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	5.5	4.8 - 5.6 %	—	SCPMG
Comment:				

A repeatable Hb A1c > or = 6.5% is diagnostic of diabetes. A single Hb A1c > or = 6.5% can also be confirmed by a fasting plasma glucose measurement > 125 mg/dL, a random plasma glucose > or = 200 mg/dL, or a 2 hour oral glucose tolerance test result > or = 200 mg/dL. Patients with Hb A1c of 5.7-6.4% are at increased risk for future diabetes.

- MAMMO SCREENING BILAT SEQUENTIAL WO COMPUTER AIDED DETECTION ANALYSIS

BILATERAL DIGITAL SCREENING MAMMOGRAM SEQUENTIAL ORDER: 3/20/2017

CLINICAL: Baseline digital screening mammogram. No complaints.

No prior exams were available for comparison.

The tissue of both breasts is extremely dense, which lowers the sensitivity of mammography.

No significant masses, calcifications, or other findings are seen in

12/23/2016 - Office Visit in FAMILY PRACTICE (continued)**Imaging (continued)**

either breast.

IMPRESSION: NEGATIVE

There is no mammographic evidence of malignancy. A routine screening mammogram is recommended within 2 years.

Kaiser Permanente regional guidelines recommend annual screening mammography for high risk patients and screening mammography within 2 years for normal low risk patients. Determination of risk assessment by radiology is limited and ultimately should be determined by the patient's primary care provider in collaboration with the patient.

Mammograms do not detect all breast cancer. Up to 15 percent of breast cancer can't be detected by mammography. Patients with palpable abnormalities may require further investigation.

Disposition and Responsibility

A letter with these results will be sent to the patient by the Mammography Department.

Dear Ms. Tiu,

Our records show that your physician has ordered lab tests that you have not yet done. Please go to a Kaiser lab for a blood test at your convenience. You do not need to fast. The lab test orders will be waiting for you in the lab.

If you have already done the test(s) recently, please disregard this notice.

Sincerely,

YVETTE GARCIA MA

Letter body:

2/3/2017

MR#000006993279

Re: Michelle E Tiu
207 Cedarwood
Irvine CA 92620-2173

Dear Michelle E Tiu,

We would like to remind you to have a mammogram done. If you have already done this, thank you for taking care of your health. If you haven't, please get this important test done. In Orange County, almost 1 in 7 women will experience breast cancer in their lifetime. Mammograms can detect breast cancer early. Early detection and intervention helps women avoid the devastating and heartbreaking effects of breast cancer.

Although you can walk in for a mammogram, an appointment is preferred. To schedule an appointment, call the radiology appointment center at 714-223-3028. We have enclosed a list of locations that have mammogram machines, along with their hours of operation.

Please take the time to take care of yourself. Do it for yourself, and those that you love.

Sincerely,

YVETTE GARCIA MA on behalf of Atoian, Ani Ardashian (M.D.)

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

12/28/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Gradually improving and Improving

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with follow up ergonomic assessment of workstation completed, recommendations completed, and ergonomic modifications of work station to be completed. She is frustrated with time it takes for the employer to address the work ergonomics situation, and is still waiting for a modification of the eye chart projector

She did get some transient benefit from trigger point injections, and feels a bit better now but had some spasm the next day; not sure if current improvement due to rest (recently on vacation) or the injection. She completed 12/12 acupuncture once a week, and has some additional physical therapy remaining or strengthening. The shooting pain in the back of her neck and head is gone, but pain over right deltoid persists. She is not taking medication for pain.

She is OK when off work, and her symptoms recur with return to work, when she uses a mirror system that requires her to lift the arm repetitively overhead. She also gets some help with yoga. She cannot lay on right side hs.

12/28/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Currently, the patient points to indicate:
right posterolateral shoulder that is aching. Pain is rated at 0-5/10 (1=min & 10= max), intermittent.

Aggravated by: any abduction, repetitive movement over chest level, (+) pain to lay on right shoulder at night

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, not working, not accommodated

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation right upper trap

Not tender to palpation midline

Active range of motion

12/28/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Flexion chin to chest, extension 40 deg
Rotation 75 deg right , 75 deg left
(-) Spurling's

Right shoulder
Stance: protracted
Tender to palpation at right grtr tub
Non tender to palpation acromioclavicular, bic groove
Active range of motion
Flexion 160deg
Abduction 170deg
External rotation 60deg
Internal rotation T8
(-) Hawkins
(-) Neers
(-) painful arc

NEURO
Normal sensation
DTR 2+ bic, tri bilateral

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER (primary encounter diagnosis)

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYSICIANS SPECIAL REPORT, PR-2 TREATING PHYSICIAN'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with
Right shoulder impingement
Cervical myofascial pain, improved

12/28/2016 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****PLAN:**

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue additional physical therapy, to address myofascial release, scap stabilizers, correct upper trap recruitment, to/establish home exercise program, support return to work usual and customary tasks (repetitive chest level and above reaching)

Ergonomic assessment of workstation completed, recommendations to be implemented; have asked KP ergonomics to review recommendations from outside for feasibility; also contact Health and Safety

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

May continue return to work usual and customary tasks

Follow up in 4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status:

Concurrent Treatment: PT/OT

Full work today.

Other Needs/Restrictions: Ergonomic assessment of workstation by KP ergonomist

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:

REASON FOR PR2:

Change in treatment plan

Chief Complaint:

SHOULDER PAIN

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing
Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No

01/23/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Gradually improving and Improving

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with follow up ergonomic assessment of workstation completed with some of the modifications of work station completed. She is still frustrated with time it takes for the employer to address the work ergonomics situation, and is still waiting for some modifications to be done

Recall, she did get some transient benefit from trigger point injections and she has completed 12/12 acupuncture as well as 12 physical therapy remaining or strengthening. The shooting pain in the back of her neck and head is gone, but pain over right deltoid much better. She is not needing medications for pain.

She is OK when off work, and she also gets some help with yoga and deep tissue massage. She can lay on right side hs.

Currently, the patient points to indicate:
right posterolateral shoulder that is aching. Pain is rated at 0-2/10 (1=min & 10= max), intermittent.

Aggravated by: any abduction, repetitive movement over chest level, (+) slight pain to lay on right shoulder at night

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

01/23/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****REVIEW OF SYSTEMS:**

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, not working, not accommodated

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to mildly palpation right upper trap with associated increased tone

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right , 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender minimally to palpation at right grtr tub

Non tender to palpation acromioclavicular, bic groove

Active range of motion

Flexion 160deg

Abduction 170deg

External rotation 60deg

Internal rotation T6

(-) Hawkins

(-) Neers

(-) painful arc

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER

M79.1 CERVICAL MYOFASCIAL PAIN SYNDROME

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This EncounterPHYSICIANS SPECIAL REPORT, PR-2 TREATING PHYSICIAN'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with

Right shoulder impingement, improved

Cervical myofascial pain, improved

PLAN:

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue home exercise program physical therapy. Did attend prior physical therapy to address myofascial release, scap stabilizers, correct upper trap recruitment

Ergonomic assessment of workstation completed, recommendations to be implemented; have asked KP ergonomics to review recommendations from outside for feasibility; recommend gel wrist pad/support for computer, and stool with back support

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

May continue return to work usual and customary tasks

Follow up in 4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The

01/23/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

03/23/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Improving

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with follow up ergonomic assessment of workstation completed with some of the modifications of work station completed with some others pending. One of the issue is that the counter height is higher than standard for a 6ft male and given that the injured worker's height, the counter is quite high for her. She is frustrated with time it takes for the employer to address the ergonomic changes however.

Recall, she did get some transient benefit from trigger point injections and she has now completed 12/12 acupuncture as well as 12/12 physical therapy. She has transitioned to self management with yoga and stretches.

The shooting pain in the back of her neck and head is gone, and pain over right deltoid much better, with only rare right shoulder pain reaching out to side. She is not needing medications for pain. She can lay on right side hs.

Currently, the patient points to indicate:

right posterolateral shoulder that is minimally aching. Pain is rated at 0-1/10 (1=min & 10= max), intermittent.

Aggravated by: any shoulder elevation and abduction, repetitive movement over chest level

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness. I.

No associated valsava pain

Patient denies history of ulcers, reflux, or renal function impairment.

03/23/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)**REVIEW OF SYSTEMS:**

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation mildly right upper trap with associated increased tone

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right , 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender minimally to palpation at right grtr tub

Non tender to palpation acromioclavicular, bic groove

Active range of motion

Flexion 170deg

Abduction 170deg

External rotation 60deg

Internal rotation T6

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER

M79.1 CERVICAL MYOFASCIAL PAIN SYNDROME

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This EncounterPHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with

Right shoulder impingement, improved

Cervical myofascial pain, improved

PLAN:

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue home exercise program physical therapy. Did attend prior physical therapy to address myofascial release, scap stabilizers, correct upper trap recruitment

Ergonomic assessment of workstation completed, recommendations to be implemented; have asked KP ergonomics to review recommendations from outside for feasibility; recommend gel wrist pad/support for computer, mouse, and stool with back support

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

May continue return to work usual and customary tasks

Follow up in 6 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

03/23/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status:

Full work today.

Other Needs/Restrictions: Recommend gel wrist pad and mouse pad/support for computer, and stool with back support, light remote

Additional Comments: Michelle E Tiu was released from our office on 3/23/2017 at 5:06 PM and has a follow up appointment on 05/18/2017 at 4:10pm. Patient has been advised to arrive 15 minutes prior to her appointment time.

03/27/2017 - Office Visit in WOMENS HEALTH CENTER/OB-GYN (continued)

Clinical Notes (continued)

Bedside pelvic ultrasound performed to document IUD within the uterine cavity at the fundus.

40 year old G1P1002

ASSESSMENT:

ROUTINE GYN EXAM INCLUDING CERVICAL PAP (primary encounter diagnosis)
IUD SURVEILLANCE
FHX OF BREAST CANCER
FHX OF OVARIAN CANCER
SCREENING FOR HPV

PLAN:

- Pap with HPV
- We had a detailed discussion about removing and replacing her Mirena IUD in the future. Currently it is correct position. She will have to plan ahead and may need office hysteroscopy for removal

Orders Placed This Encounter

- HPV COTEST SCREENING, AGE 30-65, HIGH RISK TYPES, AMPLIFIED PROBE
- GYN CYTOLOGY (PAP)

Case #: IMCG17-5839

FINAL CYTOLOGIC INTERPRETATION

CERVIX, LIQUID BASED PAP TEST:

- NEGATIVE FOR INTRAEPITHELIAL LESION OR MALIGNANCY (Normal Pap Result)

ADEQUACY:

Satisfactory for evaluation.

Endocervical/transformation zone component present.

Case signed out by: Pamela Jackson, CT (ASCP)

Date of diagnosis: 04/03/17

COLLECTED: 3/27/2017

RECEIVED: 3/27/2017

FEE CODE(S):

A. 88175 PAP, LBP GS and Rescreen-88175 x 1

EDUCATIONAL NOTE:

Cervical cytology is a screening test primarily for squamous cancers and precursors and has associated false-negative and false-positive results.

Adherence to screening guidelines and follow-up of unexplained clinical signs and symptoms are recommended to minimize false negative results.

GYN METHODOLOGY:

GYN review used the SurePath Guided Screening process plus cytotechnologist review.

Patient Instructions

Please log onto www.kp.org to register on our website. You will be able to view results, make appointments, e-mail your physician, and request a prescription refill.

Also, be sure to check out our Orange County's Women's Health website at www.kpwomenshealth.org.

If I have placed orders for medication(s) for you, here is some useful information. Prescriptions can be filled at any Orange County Kaiser pharmacy. You MUST check in with the pharmacist for your order to start to be filled. They WILL NOT fill your prescription unless you do so.

I hope that I have addressed all your questions and concerns. If not, or you have additional questions or require further explanation, then please contact me. I can be contacted via e-mail through the website 'www.kp.org', or I can also be contacted by calling 1-888-988-2800. Please leave a message and I or my nurse will call you back. If you have not already signed up for our website, I strongly encourage you to do so.

Take charge of your health.

Call the Healthy Living Helpline at 1-866-402-4320. One free call connects you with lifestyle coaches who can provide strategies and resources to help you quit smoking, get active and fit, lose weight and eat healthy.

03/27/2017 - Office Visit in WOMENS HEALTH CENTER/OB-GYN (continued)

Patient Instructions (continued)

We also offer the following Health Education classes:

- Diabetes (4 session series that includes diabetes nutrition and testing your blood sugar)
- Pre-Diabetes: Preventing Diabetes
- High Blood Pressure
- Heart Failure
- Cholesterol
- Asthma
- Nutrition and Weight Management
- Mind-Body
- Depression
- Managing Ongoing Health Conditions
- Women's Health
- Yoga

To register for Health Education classes, call the appointment center at 1-888-988-2800.

May you live long and THRIVE.

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue

05/25/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Improving

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with follow up ergonomic assessment of workstation completed with most of the modifications of work station completed with a few others pending.

One unaddressed issue is that the counter height is higher than standard for a 6ft male and given that the injured worker's height, the counter is quite high for her. She has changed the location of her flyers to in front of her so that she does not have to reach to the side. She also could use a document holder.

Recall, she did get some transient benefit from trigger point injections and she has now completed 12/12 acupuncture as well as 12/12 physical therapy. She has transitioned to self management with yoga and stretches. No needing ibuprofen.

She has right deltoid much better, with right shoulder pain reaching out to side very sporadic, not constant/frequently. She is not needing medications for pain. She can lay on right side hs.

Currently, the patient points to indicate:

right posterolateral shoulder that is aching. Pain is rated at 0-2/10 (1=min & 10= max), intermittent.

Aggravated by: any shoulder elevation and abduction

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness. I.

No associated valsava pain

Patient denies history of ulcers, reflux, or renal function impairment.

05/25/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation mildly right upper trap with associated increased tone

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right, 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender minimally to palpation at right grtr tub

Non tender to palpation acromioclavicular, bic groove

Active range of motion

Flexion 170deg

Abduction 170deg

External rotation 60deg

Internal rotation T6

(+) Hawkins, mild

(-) Neers

(-) painful arc

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER

M79.1 CERVICAL MYOFASCIAL PAIN SYNDROME

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This EncounterPHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with

Right shoulder impingement, improved, but persistent symptoms

Cervical myofascial pain, improved, but persistent symptoms

PLAN:

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue home exercise program physical therapy. Did attend prior physical therapy to address myofascial release, scap stabilizers, correct upper trap recruitment

Ergonomic assessment of workstation completed, recommendation follow up evaluation for ergonomic implementation; recommend gel wrist pad/support for computer, document holder, mouse, and stool with back support

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

May continue return to work usual and customary tasks

Follow up in 6 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed

05/25/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

understanding.

WORK STATUS:

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No

07/21/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:
NSAIDS
Ice
Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Improving

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with most of the modifications of work station completed with a few others still pending.

She has the opportunity to change rooms and needs to have an ergonomic assessment of workstation evaluation before that can be done. One still unaddressed issue is that the counter height in that MOB is even higher than standard for a 6ft male and given that the injured worker's height, the counter is quite high for her. She has changed the location of her flyers to in front of her so that she does not have to reach to the side. She also could use a document holder.

Recall, she did get transient benefit from trigger point injections and she has completed 12/12 acupuncture as well as 12/12 physical therapy. She has transitioned to self management with yoga and stretches. No needing ibuprofen.

Her right deltoid pain is much better, but still with right shoulder pain reaching out to side at times, not constant or frequently. She is not needing medications for pain. She can lay on right side hs.

Currently, the patient points to indicate:
right posterolateral shoulder that is aching. Pain is rated at 0-2/10 (1=min & 10= max), intermittent.

Aggravated by: any shoulder elevation and abduction
Alleviated by: physical therapy, rest

Associated signs and symptoms:
No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness. I.
No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

07/21/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation mildly right upper trap with associated increased tone

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right, 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender minimally to palpation at right grtr tub

Non tender to palpation acromioclavicular, bic groove

Active range of motion

Flexion 170deg

Abduction 170deg

External rotation 60deg

Internal rotation T6

(-) Hawkins

(-) Neers

07/21/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

(-) painful arc

NEURO

Normal sensation

DTR 2+ bic, tri bilaterally

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER

M79.1 CERVICAL MYOFASCIAL PAIN SYNDROME

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with
Cervical myofascial pain, improved, but persistent symptoms
Right shoulder impingement, improved

PLAN:

Continue ibuprofen with food prn

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue home exercise program physical therapy. Did attend prior physical therapy to address myofascial release, scap stabilizers, correct upper trap recruitment

Ergonomic assessment of workstation completed, recommendation follow up evaluation for possible change of workstation room, injured worker feels another room that is now available may be more ergonomic for her based on midline position of eye chart, shorter exam chair, and already has gel wrist pad/support for slit lamp

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.
May continue return to work usual and customary tasks

Follow up in 6 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

07/21/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status:

Full work today.

Other Needs/Restrictions: Recommendation follow up evaluation by ergonomics for possible change of workstation room, another room that is now available that may be more ergonomic for her based on midline position of eye chart, shorter exam chair, and already has gel wrist pad/support for slit lamp.

Additional Comments: Michelle E Tiu was released from our office on 7/21/2017 at 9:38 AM and has a follow up appointment on 8-31-2017 at 4 30 pm.

Patient has been advised to arrive 15 minutes prior to her appointment time.

Your Kaiser Permanente Care Instructions

Cawthorne Exercises for Vertigo: Care Instructions

Your Care Instructions

Simple exercises can help you regain your balance when you have vertigo. If you have Ménière's disease, benign paroxysmal positional vertigo (BPPV), or another inner ear problem, you may have vertigo off and on.

Do these exercises first thing in the morning and before you go to bed. You might get dizzy when you first start them. If this happens, try to do them for at least 5 minutes. Do a group of exercises at a time, starting at the top of the list. It may take several weeks before you can do all the exercises without feeling dizzy.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

Exercise 1

08/09/2017 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)**

While sitting on the side of the bed and holding your head still:

- Look up as far as you can.
- Look down as far as you can.
- Look from side to side as far as you can.
- Stretch your arm straight out in front of you. Focus on your index finger. Continue to focus on your finger while you bring it to your nose.

Exercise 2

While sitting on the side of the bed:

- Bring your head as far back as you can.
- Bring your head forward to touch your chin to your chest.
- Turn your head from side to side.
- Do these exercises first with your eyes open. Then try with your eyes closed.

Exercise 3

While sitting on the side of the bed:

- Shrug your shoulders straight upward, then relax them.
- Bend over and try to touch the ground with your fingers. Then go back to a sitting position.
- Toss a small ball from one hand to the other. Throw the ball higher than your eyes so you have to look up.

Exercise 4

While standing (with someone close by if you feel uncomfortable):

- Repeat Exercise 1.
- Repeat Exercise 2.
- Pass a ball between your legs and above your head.
- Sit down and then stand up. Repeat. Turn around in a circle a different way each time you stand.
- With someone close by to help you, try the above exercises with your eyes closed.

Exercise 5

In a room that is cleared of obstacles:

- Walk to a corner of the room, turn to your right, and walk back to the starting point. Now, repeat and turn left.
- Walk up and down a slope. Now try stairs.
- While holding on to someone's arm, try these exercises with your eyes closed.

When should you call for help?

Watch closely for changes in your health, and be sure to contact your doctor if:

- Your vertigo gets worse.
- You want more information about vertigo.

08/09/2017 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)**

- You want more information about exercises for vertigo.

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan and Change in patients condition

Chief Complaint:

SHOULDER INJURY and PRESCRIPTION REFILL REQUESTED

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

08/31/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****TREATMENT PROGRESS:**

The patient's symptoms from the previous visit are:

Recurrent

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with most of the modifications of work station completed with a few others still pending.

She has the opportunity to change rooms and needs to have an ergonomic assessment of workstation evaluation before that can be done. One still unaddressed issue is that the counter height in that MOB is even higher than standard for a 6ft male and given that the injured worker's height, the counter is quite high for her. She has changed the location of her flyers to in front of her so that she does not have to reach to the side. She also could use a document holder.

Recall, she did get transient benefit from trigger point injections and she has completed 12/12 acupuncture as well as 12/12 physical therapy. She has transitioned to self management with yoga and stretches. No needing ibuprofen.

Since last visit she had some recurrence of neck/shoulder girdle pain, and now also with left shoulder pain reaching and to lay on side hs after working in an alternate exam room (usually used by a much taller practitioner) where she had to pull and push very hard at an over chest/overhead level to adjust equipment in the room. She is needing ibuprofen for pain. She has trouble laying on right side hs.

Currently, the patient points to indicate:

right posterolateral shoulder that is aching. Pain is rated at 0-6/10 (1=min & 10= max), intermittent.

left lateral shoulder pain that is aching. Pain is rated at 0-6/10 (1=min & 10= max), intermittent.

Aggravated by: any shoulder elevation and abduction

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness. I.

No associated valsava pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

08/31/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation bilateral upper trap with associated increased tone

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right, 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender minimally to palpation at right grtr tub

Non tender to palpation acromioclavicular, bic groove

Active range of motion

Flexion 170deg

Abduction 170deg

External rotation 60deg

Internal rotation T6

(-) Hawkins

(-) Neers

(-) painful arc

Left shoulder

Stance: protracted

Tender minimally to palpation at right grtr tub

Non tender to palpation acromioclavicular, bic groove

Active range of motion

Flexion 160deg

08/31/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Abduction 170deg
External rotation 60deg
Internal rotation T6

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER

M79.1 CERVICAL MYOFASCIAL PAIN SYNDROME

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT
REQUEST FOR AUTHORIZATION (OHS USE ONLY)

Order Comments:

Reason: Additional Acupuncture

The patient is being referred for additional acupuncture for;
(M75.81) TENDINITIS OF RIGHT SHOULDER
(M79.1) CERVICAL MYOFASCIAL PAIN SYNDROME

Frequency: 1-2 times a week for 3-6 weeks - 6 total treatments. Michelle E Tiu has completed 12 sessions of acupuncture and demonstrated functional improvement with decrease in pain and improved ADLs towards RTW and recovery. Patient states the acupuncture has decreased pain by 60-70%. This is appropriate per MTUS Acupuncture Medical Treatment guidelines.

Referral Priority: Routine

Referral Type: Occupational Health

Referral Reason: Administrative

Expiration Date: 11/29/2017

Ibuprofen (MOTRIN) 600 mg Oral Tab

Sig: Take 1 tablet by mouth every 8 hours with food as needed for pain

Dispense: 60

Refill: 0

Order Specific Question: Is this medication for a workers' compensation condition?

Answer: Yes

08/31/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with
Cervical myofascial pain, improved, but some persistent symptoms
Right shoulder impingement, recurrent

New onset left shoulder impingement

PLAN:

Continue ibuprofen with food tid x 10-14 days, then prn, refilled
Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.
Continue home exercise program physical therapy. Did attend prior physical therapy to address myofascial release, scap stabilizers, correct upper trap recruitment
Request placed for additional acupuncture
Continue ergonomic assessment of workstation follow up evaluation
The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.
May continue return to work usual and customary tasks

Follow up in 6 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

08/31/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****Work Status:**

Full work today.

Other Needs/Restrictions: Recommendation follow up evaluation by ergonomics for possible change of workstation room, another room that is now available that may be more ergonomic for her based on midline position of eye chart, shorter exam chair, and already has gel wrist pad/support for slit lamp.

Additional Comments: Michelle E Tiu was released from our office on 7/21/2017 at 9:38 AM and has a follow up appointment on 8-31-2017 at 4 30 pm.

Patient has been advised to arrive 15 minutes prior to her appointment time.

If you have any questions, please call our office at the following numbers:
(714) 644-6450

Travel After Visit Instructions.**Your Kaiser Permanente Care Instructions****Learning About Healthy Travel Abroad****How can you stay healthy on your trip?**

The best way to stay healthy on your trip is to plan ahead. Visit or talk with your doctor at least 6 weeks before you travel to another country. That will give you time to get any vaccines that you may need. Also ask your doctor if there are medicines or extra safety steps that you should take. Other good sources for vaccine info and healthy travel tips are your nearest travel health clinic or health department.

What can you do to prevent health problems?**Prevent infections with vaccines**

- Make sure you are up to date with your routine shots. These shots can protect you from diseases such as polio, diphtheria, and measles, which are still a problem in some developing countries.
- Get any necessary vaccinations. Your doctor or a health clinic can tell you which ones are needed for your destination. Here are some examples:
 - Hepatitis A vaccine is recommended for most people traveling to developing countries.
 - Flu vaccine may be recommended because of your age or a health condition.
 - Yellow fever vaccine is recommended for travelers visiting areas in South America and Africa where the disease is active.
 - Typhoid fever vaccine may be required if you are traveling to certain areas, such as Central and South America, Africa, or some areas of Asia.

Bring medicines with you

- If you take medicines, bring a supply that will last the length of your trip. Get a letter from your doctor that lists your medical conditions and the medicines you take. Bring prescriptions for refills if you will be traveling for a long time. Also bring any medical supplies you may need such as blood sugar testing supplies or insulin needles.
- If you are going to an area where malaria is a risk, ask your doctor or health clinic for a prescription to help prevent infection. This medicine works best if taken before, during, and after your trip.
- Your doctor may recommend that you bring an over-the-counter medicine, such as bismuth subsalicylate (Pepto-Bismol) or loperamide (Imodium), that will help relieve traveler's diarrhea. Your doctor may also prescribe an antibiotic to take with you to treat diarrhea if you are going to an area where modern medical care

**09/25/2017 - Telephone Appointment Visit - Allied Health/Nurse Visit in FAMILY PRACTICE ADULT NURSE CL
(continued)****Clinical Notes (continued)**

isn't readily available.

Make safe choices as you travel

- Practice safe sex. One of the most common ways that travelers get infections is by having sex with an infected person. Using condoms can prevent sexually transmitted infections and diseases.

Be aware of sources of possible injury in accidents on cars, boats, and public transportation. Bad roads, poor driver training, and crowded roadways can make driving dangerous in some countries. If you are hiring a driver (such as in a taxi), ask the driver to slow down or drive more carefully if you feel unsafe.

- Air pollution in some large cities can be a problem if you have asthma or other respiratory conditions. Avoid those cities when air quality is poor, or stay indoors as much as possible.

- Be careful around dogs and other animals. Dogs in developing countries are often not tame and may bite. Rabies is more common in tropical and subtropical regions.

- Be aware of the danger of altitude sickness if your destination is much higher above sea level than what you used to. Ask your doctor for advice on how to avoid altitude sickness. He or she may also prescribe medicine to help treat it.

Where can you get the best information?

- Use the Internet to find travel health information. Try these websites:

- www.cdc.gov/travel. This is the website for travel information from the Centers for Disease Control and Prevention (CDC).

- www.who.int/ith/en. This website lists information from the World Health Organization (WHO) on travel, required immunizations, and disease outbreaks.

- Find out where you can get the best medical care in the region you are visiting. The U.S. State Department website, www.usembassy.gov / every U.S. embassy worldwide and lists some doctors and medical facilities in those countries.

- Take along the phone numbers and addresses of embassies in the areas you will visit. They can help you find a doctor or hospital. Find out if your insurance company will cover you. You may want to get special travel health insurance.

- If you are taking a cruise, you can find your ship's health record on this website: www.cdc.gov/nceh/vsp.

Where can you learn more?

Go to <http://www.kp.org>

Enter R129 in the search box to learn more about "Learning About Healthy Travel Abroad."

INSECT BITES PRECAUTION / PREVENTION

Many diseases, like malaria and dengue, are spread through insect bites. One of the best protections is to prevent insect bites by:

**09/25/2017 - Telephone Appointment Visit - Allied Health/Nurse Visit in FAMILY PRACTICE ADULT NURSE CL
(continued)****Clinical Notes (continued)**

Using insect repellent (bug spray) with 30%-50% DEET. Picaridin, available in 7% and 15% concentrations, needs more frequent application. There is less information available on how effective picaridin is at protecting against all of the types of mosquitoes that transmit malaria.

Wearing long-sleeved shirts, long pants, and a hat outdoors.

Remaining indoors in a screened or air-conditioned area during the peak biting period for malaria (dusk and dawn).

Sleeping in beds covered by nets treated with permethrin, if not sleeping in an air-conditioned or well-screened room.

Spraying rooms with products effective against flying insects, such as those containing pyrethroid.

TRAVEL DIARRHEA

Diseases from food and water are the leading cause of illness in travelers. Follow these tips for safe eating and drinking:

Wash your hands often with soap and water, especially before eating. If soap and water are not available, use an alcohol-based hand gel (with at least 60% alcohol).

Drink only bottled or boiled water, or carbonated (bubbly) drinks in cans or bottles. Avoid tap water, fountain drinks, and ice cubes. If this is not possible, learn how to make water safer to drink.

Do not eat food purchased from street vendors.

Make sure food is fully cooked.

Avoid dairy products, unless you know they have been pasteurized.

Diseases from food and water often cause vomiting and diarrhea. Make sure to bring diarrhea medicine with you so that you can treat mild cases yourself.

In case of diarrhea:

First use over counter Medication:

Immodium AD, 2 tablets right away, then 1 tablet for each loose stool.

For severe diarrhea (diarrhea that is incapacitating)

By prescription only:

Azithromycin 250 mg x 3 day

Always remember your 3 IT'S before eating!

* COOK IT

* BOIL IT

* PEEL IT

OTHER MEDICATIONS (PRESCRIPTIONS) ORDERED/WRITTEN:

Azithromycin 250 mg Tabs #6

Sig: 2 tabs daily for 1-3 days as needed for severe diarrhea.

See Physician if diarrhea persist.

Chief Complaint:

SHOULDER INJURY and TREATMENT AUTHORIZATION

10/06/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Recurrent

Michelle E Tiu is a 40 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with most of the modifications of work station completed with a few others still pending.

She did change rooms and is still waiting for the new room's ergonomic assessment of workstation evaluation. One still unaddressed issue is that the counter height in that MOB is even higher than standard for a 6ft male and given the injured worker's height, the counter is quite high for her.

Recall, in the past she did get benefit from trigger point injections and she has completed 12/12 acupuncture as well as 12/12 physical therapy. She has transitioned to self management with yoga and stretches.

Since last visit she had some improvement in the recurrence of right neck/shoulder girdle pain, but left shoulder pain persistent when reaching and to lay on side hs. Recall, this came on after working in an alternate exam room (usually used by a much taller practitioner) where she had to pull and push very hard with left arm at an over chest/overhead level to adjust equipment in the room.

She is needing ibuprofen for pain and Bengay hs. She has trouble laying on the side hs.

10/06/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Currently, the patient points to indicate:

right posterolateral shoulder that is aching. Pain is rated at 0-4/10 (1=min & 10= max), intermittent.
left lateral shoulder pain that is aching. Pain is rated at 0-6/10 (1=min & 10= max), intermittent.

Aggravated by: any shoulder elevation and abduction

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness. I.

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation bilateral upper trap with associated increased tone

Not tender to palpation midline

Active range of motion

Flexion chin to chest, extension 40 deg

10/06/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Rotation 75 deg right, 75 deg left
(-) Spurling's

Right shoulder
Stance: protracted
Tender minimally to palpation at right grtr tub
Non tender to palpation acromioclavicular, bic groove
Active range of motion
Flexion 170deg
Abduction 170deg
External rotation 60deg
Internal rotation T6
(-) Hawkins
(-) Neers
(-) painful arc

Left shoulder
Stance: protracted
Tender minimally to palpation at right grtr tub
Non tender to palpation acromioclavicular, bic groove
Active range of motion
Flexion 140deg
Abduction 120deg
External rotation 60deg
Internal rotation T6
(-) Hawkins
(-) Neers
(-) painful arc

NEURO
Normal sensation
DTR 2+ bic, tri bilaterally

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER
M79.1 CERVICAL MYOFASCIAL PAIN SYNDROME

Diagnoses not noted on current encounter:
(M75.81) TENDINITIS OF RIGHT SHOULDER
(M79.1) CERVICAL MYOFASCIAL PAIN SYNDROME\

TREATMENT PLAN:

10/06/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT
REQUEST FOR AUTHORIZATION (OHS USE ONLY)

Order Comments:

Reason: Additional Acupuncture

The patient is being referred for additional acupuncture for
(M75.81) TENDINITIS OF RIGHT SHOULDER
(M79.1) CERVICAL MYOFASCIAL PAIN SYNDROME

Frequency: 1-2 times a week for 3-6 weeks - 6 total treatments. Michelle E Tiu has completed approximately 12 sessions of acupuncture and demonstrated functional improvement with decrease in pain and improved ADLs towards RTW and recovery. Patient states the acupuncture has decreased pain by 60%. This is appropriate per MTUS Acupuncture Medical Treatment guidelines.

Referral Priority: Routine

Referral Type: Occupational Health

Referral Reason: Administrative

Expiration Date: 1/4/2018

Ibuprofen (MOTRIN) 600 mg Oral Tab

Sig: Take 1 tablet by mouth every 8 hours with food as needed for pain

Dispense: 60

Refill: 0

Order Specific Question: Is this medication for a workers' compensation condition?

Answer: Yes

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with
Cervical myofascial pain, improved, but some persistent symptoms
Right shoulder impingement, recurrent

New onset left shoulder impingement

PLAN:

Continue ibuprofen 600mg with food tid refilled

Consider oral prednisone or steroid injection at follow up

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue home exercise program physical therapy. Did attend prior physical therapy to address myofascial release, scap stabilizers, correct upper trap recruitment

Request placed for additional acupuncture

Continue ergonomic assessment of workstation follow up evaluation

10/06/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist. May continue return to work usual and customary tasks

Follow up in 6 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

DOCTOR'S FIRST REPORT OF OCCUPATIONAL INJURY OR ILLNESS

10/12/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****--- This document is for State Form (DFR) ---**

Michelle E Tiu is a 41 year old left handed female who has worked as a(n) OPTOMETRIST for the past 14 years.

The patient's job responsibilities include desk work/sedentary work, overhead reaching, repetitive bending/twisting at waist level and upper extremity repetitive motion.

MECHANISM OF INJURY:

Sprain/strain

Origin of Injury:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed left shoulder pain

Translation required: No

SUBJECTIVE COMPLAINTS:**Treatment History for This Injury:**

Michelle E Tiu states her symptoms started gradually.

The patient was initially seen for the injury by this provider.

X-rays performed relative to this visit: none

Diagnostic tests: none

Treatment History and Medications:

Ibuprofen regularly, BenGay hs

Chief Complaint:

SHOULDER INJURY

Nursing notes reviewed by MURRAY ANDREW GREENWOOD MD.

Current Complaints Today:

Patient Complaints:

Currently, the patient points to indicate:

left shoulder pain that is aching/numbing. Pain is rated at 0-7/10 (1=min & 10= max), intermittent.

Aggravated by: any movement overhead; cannot lay on side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

10/12/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

The patient completed the Regional Review of Systems Questionnaire and I reviewed.

General: No fever, chills, or sweats

Eyes: No eye pain, blurry vision, double vision, or visual disturbances

Ears, Nose, Throat, and Mouth: No pain, hearing loss, or ear ringing

Cardiovascular: No chest pain or palpitations

Respiratory: No wheezing, cough, or shortness of breath

Gastrointestinal: No nausea, vomiting, or abdominal pain and No rectal bleeding or black stools

Genitourinary: No painful urination and No blood in urine

Skin: No rash, redness, or swelling

Psychiatric: No anxiety or depression

Endocrine: No unexplained weight loss, excessive thirst or excessive urination

Hematology: No easy bruising or bleeding

Allergy: No known environmental allergies

Extended Musculoskeletal:

I reviewed with the patient the following extended musculoskeletal systems.

Past Medical, Family, and Surgical History:

Reviewed Electronic Medical Records: No

Patient did not have a prior work related injury to the same body part(s).

Patient did not have a prior non-work related injury to the same body part(s).

Family History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

Past Surgical History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

SOCIAL HISTORY:

Work Status before this visit: Full Duty

Claim Information: pending.

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

10/12/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Constitutional: Well developed and well nourished and Alert and conversant

Ears, Nose, Throat, and Mouth: No signs of trauma, or deformity

Eyes: Conjunctivae and EOMs are normal

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Skin: Clear warm and dry

Psychiatric: Pleasant, alert, no distress, mood and affect normal

X-ray and laboratory ordered today:

yes

DIAGNOSIS:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

There is no evidence of chemical or toxic compounds being involved.

ARE YOUR FINDINGS AND DIAGNOSIS CONSISTENT WITH PATIENT'S ACCOUNT OF INJURY OR ONSET OF ILLNESS?

Yes

IS THERE ANY OTHER CURRENT CONDITON THAT WILL IMPEDE OR DELAY PATIENT'S RECOVERY?

No

TREATMENT RENDERED:

Michelle E Tiu has been advised to continue the following previous medication(s):

The medication(s)/supplies/radiological studies ordered this visit:

REFERRAL PHYSICAL THERAPY / OCCUPATIONAL THERAPY

Order Comments:

Reason: Initial Physical Therapy

The patient is being referred for physical therapy for

10/12/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****(M75.42) IMPINGEMENT SYNDROME OF LEFT SHOULDER**

Frequency: 1-2 times a week for 3-6 weeks - total of 6 treatments.

Physical Therapy is appropriate to help improve function, increase strength, range of motion, flexibility, and help minimize discomfort.

This is appropriate per MTUS Chronic Pain Medical Treatment Guidelines, Physical Medicine Treatment.

Referral Priority: Routine

Referral Type: Outpatient Service

Referral Reason: Specialty Services Required

Referral Location: *ORANGE COUNTY

REQUEST FOR AUTHORIZATION (OHS USE ONLY)

Order Comments:

Reason2: Initial Acupuncture

The patient is being referred for acupuncture for

(M75.42) IMPINGEMENT SYNDROME OF LEFT SHOULDER

Frequency: 1-2 times a week for 3-6 weeks - 6 total treatments.

A 6 session trial of acupuncture is requested to improve function, diminish medication use and decrease work restrictions. This is appropriate per MTUS Acupuncture Medical Treatment guidelines. If the initial 6 sessions have a beneficial result, will consider requesting additional sessions at the next evaluation.

Referral Priority: Routine

Referral Type: Occupational Health

Referral Reason: Administrative

Expiration Date: 1/31/2018

Naproxen (NAPROSYN) 500 mg Oral Tab

Sig: Take 1 tablet by mouth 2 times a day with food as needed for pain (Workers comp)

Dispense: 60

Refill: 0

Order Specific Question: Is this medication for a workers' compensation condition?

Answer: Yes

Treatment and Supplies:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with
Left shoulder impingement.

PLAN:

XR left shoulder ordered, images not available at time of this note

Naproxen 500mg bid food prn pain

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request for physical therapy placed.

10/12/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist. Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May return to work usual and customary tasks activity level

Follow up in 2-3 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

11/2/2017

ADDENDUM

Injured worker reported ongoing pain and discomfort despite physical therapy.

PLAN

Request placed for acupuncture for left shoulder pain and spasm management

Electronically signed by:

MURRAY ANDREW GREENWOOD MD

11/2/2017

10:03 AM

IF FURTHER TREATMENT REQUIRED, SPECIFY TREATMENT PLAN/ESTIMATED DURATION: More than likely the patient's condition is expected to improve or reach maximum medical improvement or full recovery in 8 week(s).

IF HOSPITALIZED AS INPATIENT, GIVE HOSPITAL NAME, LOCATION, AND DATE ADMITTED:

no

WORK STATUS:

See Below

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:

11/16/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****REASON FOR PR2:**

Released from care

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Recurrent

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has continued return to work usual and customary tasks, with most of the modifications of work station completed with a few others still pending.

She did change rooms, but one still unaddressed issue is that the counter height in that MOB is even higher than standard for a 6ft male and given the injured worker's height, the counter is quite high for her.

Recall, in the past she did get benefit from trigger point injections and she has completed 12/12 acupuncture as well as 12/12 physical therapy. She has transitioned to self management with yoga and stretches.

11/16/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Since last visit she has had almost insignificant right neck/shoulder girdle pain. She is no longer needing ibuprofen for pain and Bengay hs. She has trouble laying on the side hs.

Currently, the patient points to indicate:

No right posterolateral shoulder pain

Aggravated by: any shoulder elevation and abduction

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation bilateral upper trap with associated increased tone

Not tender to palpation midline

Painless active range of motion

11/16/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Flexion chin to chest, extension 40 deg
Rotation 75 deg right, 75 deg left
(-) Spurling's

Right shoulder
Stance: protracted
Tender minimally to palpation at right grtr tub
Non tender to palpation acromioclavicular, bic groove
Active range of motion
Flexion 170deg
Abduction 170deg
External rotation 60deg
Internal rotation T6
(-) Hawkins
(-) Neers
(-) painful arc

NEURO

Normal sensation
DTR 2+ bic, tri bilaterally

DIAGNOSES:

M75.81 TENDINITIS OF RIGHT SHOULDER
M79.1 CERVICAL MYOFASCIAL PAIN SYNDROME

Diagnoses not noted on current encounter:
(M75.81) TENDINITIS OF RIGHT SHOULDER
(M79.1) CERVICAL MYOFASCIAL PAIN SYNDROME

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 40 year old female who presents with complaints of right shoulder and upper right trap pain that she relates to an incident at work.

11/16/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

History and physical examination was consistent with
Cervical myofascial pain, improved
Right shoulder impingement, resolved

PLAN:

Discontinue ibuprofen 600mg with food tid, not needed
Continue home exercise program physical therapy.
May continue return to work usual and customary tasks

Release from care

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Gradually improving

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Since last visit she has completed 8/12 physical therapy, 8/12 acupuncture with approximately 40-50% improvement. She is using ibuprofen as needed, often reducing pain to 3/10.

12/18/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Currently, the patient points to indicate:
left shoulder pain that is aching/numbing. Pain is rated at 4-5/10 (1=min & 10= max), intermittent.

Aggravated by: any repetitive movement overhead; cannot lay on side hs
Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

Dr. Greenwood, Patient is requesting the results of her 10-14-17 XR LEFT SHOULDER 2 OR MORE VIEWS .
She would like to know if she has an impingement.

She is also stating that her current medication is not helping with her pain and she is taking the maximum amount allowed: Indomethacin (INDOCIN) 25 mg Oral Cap

Patient asked that I send this information to you after her appointment today.

Patient call back: 949-892-8322

Thank you.
Carol

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed left shoulder pain

12/29/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****Diagnostic Testing:**

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Worsening

Treatment Since Last Visit:

States she has been having more pain in her left shoulder the past few days with no new injury. Indicates she is still awaiting ergonomic work station evaluation. She does not feel the Indocin is helping relieve her pain and is requesting something else topical.

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Michelle E Tiu is a 41 year old female with left shoulder pain and discomfort. Left shoulder pain increased and is moderate frequent.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

12/29/2017 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****Vital Signs:**

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

PHYSICAL EXAMINATION:

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

Cardiovascular: Intact distal pulses.

Musculoskeletal:

Left shoulder: She exhibits decreased range of motion, tenderness and pain. She exhibits no swelling.

Neurological: She is alert and oriented to person, place, and time. She has normal sensation and normal reflexes. Coordination normal.

Skin: Skin is warm and dry.

Psychiatric: Mood and affect normal.

Nursing note and vitals reviewed.

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:

Chief Complaint:
SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed left shoulder pain

Diagnostic Testing:
XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

01/11/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Gradually improving

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Since last visit she completed approximately 12/12 physical therapy, and also completed acupuncture with approximately 40-50% improvement. She is using ibuprofen as needed, often reducing pain to 3/10. Did flare up a few weeks ago when continuing at usual and customary tasks

Currently, the patient points to indicate:

left anterior shoulder pain that is aching/numbing. Pain is rated at 5/10 (1=min & 10= max), intermittent.

Aggravated by: any repetitive movement overhead; cannot lay on left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

01/11/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation at left upper trap,

Non tender to palpation anterior shoulder/bicep and less at grtr tub

Clinical Notes (continued)

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT
REFERRAL PHYSICAL THERAPY / OCCUPATIONAL THERAPY

Order Comments:

Reason: Additional Physical Therapy

The patient is being referred for additional physical therapy for
(M75.42) IMPINGEMENT SYNDROME OF LEFT SHOULDER

Frequency: 1-2 times a week for 3-6 weeks - total of 6 treatments.

Patient has completed approximately 6 therapy treatments to date and reported decrease in pain and improved function in ADLs, decreased medication usage, and decrease work restrictions. Patient reports decrease in pain by 40-50%. Physical therapy is appropriate per MTUS Chronic Pain Medical Treatment guidelines, Physical Medicine Treatment.

Referral Priority: Routine

Referral Type: Outpatient Service

Referral Reason: Specialty Services Required

Referral Location: *ORANGE COUNTY

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with
Left shoulder impingement.

PLAN:

Tiger balm patch

Continue Indocin 25mg tid food prn pain

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request placed for additional physical therapy, given 50% improvement with current treatments. Focus on home exercise program, strengthening, scapular stabilization

Complete additional acupuncture for pain and spasm, management

Request placed for ergonomic assessment of workstation

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May return to work modified tasks activity level; to avoid overhead use of the left arm

Follow up in 1 week.

01/11/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on
10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Gradually improving

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Since last visit she completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal ergonomist having reviewed the

01/24/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

workstation and patient reports the employer planning to change work set up nationally secondary to cluster of illness in optometry department. She is using salompas, ibuprofen as needed, often reducing pain to 3/10. Did flare up a few weeks ago when continuing at usual and customary tasks

Currently, the patient points to indicate:

left anterior shoulder pain that is aching/numbing. Pain is rated at 8/10 (1=min & 10= max), intermittent.

Aggravated by: any repetitive movement overhead; cannot lay on left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Refill: 0

Order Specific Question: Is this medication for a workers' compensation condition?

Answer: Yes

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with

Left shoulder impingement, persistent

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, 1.1 cm, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

Salon pas patch, refilled

Continue Sulindac 200mg bid food

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue additional physical therapy, given 50% improvement with recent prior treatments. Focus on home exercise program, strengthening, scapular stabilization

Request placed for additional acupuncture for pain and spasm, management

Prior visit request placed for ergonomic assessment of workstation; to be completed

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May return to work modified tasks activity level; to avoid overhead use of the left arm

Follow up in 2 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

02/07/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

History and physical examination was consistent with
Left shoulder impingement, persistent

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articular cartilage

PLAN:

Salon pas patch

Continue Sulindac 200mg bid food

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue additional physical therapy home exercise program; avoid abduction maneuvers, focus on strengthening, scapular stabilization

Continue additional acupuncture for pain and spasm, management

Prior visit request placed for ergonomic assessment of workstation; still to be completed

Patient defers steroid injection today, will refer to orthopedics for second opinion

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

Note patient cannot have MRI secondary to prior eye surgery

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May return to work modified tasks activity level; to avoid overhead use of the left arm

Follow up in 3-4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Orthopedic Clinic Visit
Dr Jason Richards

primary care physician: Atoian, Ani Ardashian (M.D.)

SUBJECTIVE:

CC: left shoulder pain

HPI:

Michelle E Tiu is a 41 year old LHD female who complains of history of left shoulder pain for about 6 months. Denies any particular injury but seemed to happen from repetitive movements at work. She works as an optometrist here at KP and does repetitive movements with her eye exam equipment. Pain is both anterior shoulder and posterior lateral shoulder. Some night pain. Has used different anti-inflammatories in past, currently not taking any. Using some salopas, going to acupuncture twice a week. Has done a fair bit of Physical Therapy. No injections. Has a plate in her skull from an orbital blow out fracture.

SENSATION: intact to light touch axillary, radial, ulnar, median distributions

Cardiovascular: Radial pulse palpable. capillary refill< 2 seconds. pink/warm fingers.

Independent second evaluation of X-ray's shoulder show: normal registry, no glenohumeral or ac joint degenerative changes, no fractures or dislocations.

Assessment: left biceps tendinitis

Plan:

- Offered injection today in clinic
- cont rotator cuff and scapula stabilizer strengthening
- Ice/heat as needed
- NSAIDs as needed
- All questions answered
- Follow up if symptoms persist or return, or for any other concerns.

The risks and benefits of the injection were discussed with the patient including possible risk of infection. A time out was performed. The left biceps groove was palpated, the anterior shoulder was prepped and a mixture of 2 cc 1% lidocaine and 1 cc Kenalog was injected into the biceps groove. The patient tolerated the procedure well. The patient was counseled to rest the shoulder for a few days and to use ice/nsaids/tylenol as needed and to call the office with any concerns.

Summary: Provider Comments

Reason: /WORK COMP

Left shoulder impingement, biceps tendinitis

Symptoms persistent since 8/2017, despite activity modification, NSAIDS, physical therapy.

Patient cannot have MRI secondary to orbital blowout fracture with repair.

Limited left shoulder US in clinic showed:

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articular cartilage

She has refused steroid injection on multiple occasions (but may agree to it with you) and requested second opinion

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan and Change in patients condition

Chief Complaint:

SHOULDER PAIN

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue

03/01/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on
10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Persistent and Improved

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, she completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally secondary to cluster of illness in optometry department.

Since last visit she saw Dr Richards 2/20/2018, with steroid injection given:

'Assessment: left biceps tendinitis

Plan:

- Offered injection today in clinic
- cont rotator cuff and scapula stabilizer strengthening
- Ice/heat as needed
- NSAIDs as needed
- All questions answered
- Follow up if symptoms persist or return, or for any other concerns.

The risks and benefits of the injection were discussed with the patient including possible risk of infection. A time out was performed. The left biceps groove was palpated, the anterior shoulder was prepped and a mixture of 2 cc 1% lidocaine and 1 cc Kenalog was injected into the biceps groove. The patient tolerated the procedure well. The patient was counseled to rest the shoulder for a few days and to use ice/nsaids/tylenol as needed and to call the office with any concerns.'

She also had recent ergonomic assessment of workstation evaluation through Sedgwick. Physical therapy has been on hold secondary to increased symptoms, and during ergonomic eval she felt fatigued doing overhead activity with her left arm.

Now is currently working alternate job in Quality, using salonpas, ibuprofen as needed.

03/01/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Currently, the patient points to indicate:

left anterior/biceps shoulder pain that is aching/numbing. Pain is rated at 3-4/10 (1=min & 10= max), intermittent.

Aggravated by: any repetitive movement, especially posterior deltoid exercises, empty can; cannot lay on left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

Breastfeeding? No

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation at left upper trap,

Non tender to palpation anterior shoulder/bicep and grtr tub

Order Specific Question: Is this medication for a workers' compensation condition?
Answer: Yes

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with

Left shoulder impingement, persistent

Left biceps tendinitis, s/p steroid injection 2/20/2018

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

Salon pas patch, refilled

Continue Sulindac 200mg bid food

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request placed for additional physical therapy home exercise program; focus on strengthening, scapular stabilization

To complete ergonomic assessment of workstation; equipment to be dispensed

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

Note patient cannot have MRI secondary to prior eye surgery

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May return to work modified tasks activity level; to avoid overhead use of the left arm. Patient s/p procedure 2/20/2018, and anticipate that she will not be able to make significant progress toward return to work usual and customary tasks until approximately 3/20/2018. May be more appropriate to reserve remaining modified duty days until that time.

Follow up in 2 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

03/01/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status:

Modified Work (Applies to work and home): This patient is placed on modified activity at work (if available) and at home from 3/1/2018 through 3/15/2018

ALLOWED:

Reach above left shoulder: Not at all.

Lift/Carry/Push/Pull no more than 5 pounds

Concurrent Treatment: PT/OT

Other Needs/Restrictions: Patient s/p procedure 2/20/2018, and anticipate that she will not be able to make significant progress toward return to work usual and customary tasks until approximately 3/20/2018. May be more appropriate to reserve remaining modified duty days until that time.

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on
10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Persistent and Improved

03/15/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, she completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally secondary to cluster of illness in optometry department.

She saw Dr Richards 2/20/2018, with bicipital groove steroid injection given. She was sore day after the injection, but then settled within a few days and left shoulder pain is very much better now. She also had recent ergonomic assessment of workstation evaluation through Sedgwick; equipment still pending. Physical therapy has been restarted and she is on a strengthening program, and is aware of being weaker on the left.

Now is currently working alternate job in Quality, using salopas, ibuprofen as needed.

Currently, the patient points to indicate:

left anterior/biceps shoulder pain that is aching/numbing. Pain is rated at 1-2/10 (1=min & 10= max), intermittent.

Aggravated by: any repetitive movement, especially posterior deltoid exercises, empty can; cannot lay on left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

03/15/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation at left upper trap,

Non tender to palpation anterior shoulder/bicep and grtr tub

Active range of motion

Flexion 175deg

Abduction 170deg

External rotation 60deg

Internal rotation T12

(-) Hawkins

REFERRAL PHYSICAL THERAPY / OCCUPATIONAL THERAPY

Order Comments:

Reason: Additional Physical Therapy

The patient is being referred for additional physical therapy for strengthening, range of motion, and

03/15/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

endurance; to support return to work usual and customary tasks
(M75.42) IMPINGEMENT SYNDROME OF LEFT SHOULDER

Frequency: 1-2 times a week for 3-6 weeks - total of 6 treatments.

Patient has completed approximately 6 therapy treatments to date and reported decrease in pain and improved function in ADLs, decreased medication usage, and decrease work restrictions. Patient reports decrease in pain by 60-70%. Physical therapy is appropriate per MTUS Chronic Pain Medical Treatment guidelines, Physical Medicine Treatment.

Referral Priority: Routine

Referral Type: Outpatient Service

Referral Reason: Specialty Services Required

Referral Location: *ORANGE COUNTY

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with

Left shoulder impingement, persistent

Left biceps tendinitis, s/p steroid injection 2/20/2018

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

Salon pas patch, refilled

Continue Sulindac 200mg bid food

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request placed for additional physical therapy home exercise program; focus on strengthening, scapular stabilization, to support planned return to work and progression toward usual and customary tasks

Ergonomic assessment of workstation equipment to be dispensed

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May return to work modified tasks activity level; to avoid overhead use of the left arm. Anticipate that she will not be able to make significant progress toward return to work usual and customary tasks until ergonomic assessment of workstation equipment is available. May be more appropriate to reserve remaining modified duty days until that time .

Follow up in 2 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed

Note: exam normal; sinus rinse daily; just finished Z pack; if symptoms still present by end of week to notify me.

Medication side effect, benefit and alternatives discussed.
Pt agrees and understands the above plan.
Pt instructed to follow up if worsening of any of the above symptoms occur.

CREATININE, SERUM [1104999618]

Resulted: 03/26/18 1659, Result status: Final result

Order status: Completed

Filed on: 03/17/20 1833

Collected by: Gordillo,Pedro 03/26/18 0932

Resulting lab: SCPMG REGIONAL REFERENCE
LABORATORIES, CLINICAL PATHOLOGY - CHINO HILLS

Narrative:

RMS ACCN: 630245668

Acknowledged by: Atoian, Ani Ardashian (M.D.), M.D. on 03/26/18 1757

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	0.63	<=1.10 mg/dL	—	SCPMG
GLOMERULAR FILTRATION RATE	111	mL/min/BSA	—	SCPMG

Comment:

Estimated GFR (eGFR) is calculated by the CKD-Epi formula using serum creatinine, sex, age and race. Result is normalized to a standard body surface area (BSA, 1.73m2). This result is invalid if serum creatinine is not in steady state, if patient is receiving dialysis, or if muscle mass is significantly above or below population norm for age and gender.

-GFR Ranges-

GFR >89 Normal (or CKD1*)

60-89 Mildly reduced (CKD2*)

30-59 Moderately reduced (CKD3 if >3mos)

15-29 Severely reduced (CKD4 if >3mos)

Labs (continued)

GFR <15 Kidney failure (CKD5 if >3mos)
* GFR >60 is not diagnostic of CKD1 or 2
unless another marker of kidney damage is present
(e.g. excessive urine albumin or urine protein
on 2 occasions, or renal biopsy or imaging abnormality).

VITAMIN D, 25-HYDROXY [1104999622] (Abnormal)

Resulted: 03/28/18 1312, Result status: Final result

Order status: Completed
Collected by: Gordillo,Pedro 03/26/18 0932
Narrative:
RMS ACCN: 630245667
Acknowledged by: Atoian, Ani Ardashian (M.D.), M.D. on 03/29/18 2056

Filed on: 03/17/20 1833
Resulting lab: SHERMAN WAY REGIONAL LABORATORY

Components

Component	Value	Reference Range	Flag	Lab
VITAMIN D, 25-HYDROXY, D3	27	ng/mL	—	956
VITAMIN D, 25-HYDROXY, D2	<4	ng/mL	—	956
25-HYDROXYVITAMIN D	27	30 - 100 ng/mL	L ▼	956

Comment:

There is general consensus (Endocrine Society, Natl Osteoporosis FDN, K_DOQI) that 25-OH Vitamin D measurements > 30 ng/mL are desirable. However, most Americans are deficient by this standard (NHanes III).

Levels <10 ng/mL are consistent with a diagnosis of Rickets/Osteomalacia.

Infants normally produce Vitamin D metabolites that falsely elevate 25-OH Vitamin D measurements. Please order D,25-Hydroxy, Neonatal [82306D] for these patients.

This test was developed and its performance characteristics determined by each applicable laboratory in the Southern California Permanente Medical Group Laboratory System where the test is performed. It has not been cleared or approved by the FDA. Each applicable laboratory is regulated under CLIA as qualified to perform high-complexity testing. This test is used for clinical purposes. It should not be regarded as investigational or for research.

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	5.3	<=5.6 %	—	SCPMG
Comment:				

A repeatable HbA1c > or = 6.5% is diagnostic of diabetes. A single HbA1c > or = 6.5% can also be confirmed by a fasting plasma glucose measurement > 125 mg/dL, a random plasma glucose > or = 200 mg/dL, or a 2 hour oral glucose tolerance test result > or = 200 mg/dL. Patients with HbA1c of 5.7-6.4% are at increased risk for future diabetes.

Dear Michelle,

I have reviewed your labs.

Your vitamin D level is low. Please make sure to take between 2000-5000 International Unit(s) of vitamin D3 daily.

Your LDL (bad cholesterol) has gone up. Please monitor intake of animal fats,

Please let me know should you have any questions.
ANI ARDASHIAN ATOIAN MD

Chief Complaint:

SHOULDER INJURY

Translation required: No

03/29/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:**

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Improved

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, she completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally secondary to cluster of illness in optometry department.

She saw Dr Richards 2/20/2018, with bicipital groove steroid injection given. She was sore day after the injection, but then settled within a few days and left shoulder pain was very much better after and continuing to improve. She also had recent ergonomic assessment of workstation evaluation through Sedgwick; equipment still pending. Physical therapy has been restarted and she is on a strengthening program, and making gains.

03/29/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Currently, the patient points to indicate:
left anterior/biceps shoulder pain that is aching/numbing. Pain is rated at 1/10 (1=min & 10= max),
intermittent.

Aggravated by: any repetitive movement, especially posterior deltoid exercises, empty can; can now lay on
left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

BP 117/60 | Pulse 75

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation at left upper trap,

Non tender to palpation anterior shoulder/bicep and grtr tub

Active range of motion

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left shoulder impingement, persistent

Left biceps tendinitis, s/p steroid injection 2/20/2018, improved

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articular cartilage

PLAN:

Salon pas patch, refilled

Continue Sulindac 200mg bid food

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request placed for additional physical therapy home exercise program; focus on strengthening, scapular

03/29/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

stabilization, to support planned return to work and progression toward usual and customary tasks

Ergonomic assessment of workstation equipment to be dispensed

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May return to work modified tasks activity level; to avoid overhead use of the left arm. Anticipate that she will not be able to make significant progress toward return to work usual and customary tasks until ergonomic assessment of workstation equipment is available. May be more appropriate to reserve remaining modified duty days until that time .

Follow up in 2 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status:

Modified Work (Applies to work and home): This patient is placed on modified activity at work (if available) and at home from 3/29/2018 through 4/10/2018

03/29/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****ALLOWED:**

Reach above left shoulder: Occasionally (up to 25% of shift).

Lift/Carry/Push/Pull no more than 10 pounds

Concurrent Treatment: PT/OT

Other Needs/Restrictions: Anticipate that she will not be able to make significant progress toward return to work usual and customary tasks until ergonomic assessment of workstation equipment is available. May be more appropriate to reserve remaining modified duty days until that time .

Additional Comments: Michelle E Tiu was released from our office on 3/29/2018 at 4:07 PM and has a follow up appointment on 4-10-2018 at 3 10 pm. Patient has been advised to arrive 15 minutes prior to her appointment time.

If you have any questions, please call our office at the following numbers:
(714) 644-6450

Chief Complaint:

SHOULDER PAIN

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a

04/10/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, she completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to to cluster of illness in optometry department. Currently not using any pain medications.

She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given. She was sore day after the injection, but that settled within a few days and left shoulder pain was very much better afterward and is continuing to improve with any waning of effect so far. She also had recent ergonomic assessment of workstation evaluation through Sedgwick; equipment still pending/not obtained yet. Physical therapy has been restarted and she continues to work on a strengthening program, and is making gains.

Currently, the patient points to indicate:

left anterior/biceps shoulder pain that is aching/numbing. Pain is rated at 1/10 (1=min & 10= max), intermittent.

04/10/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs
Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

Ht 5' 1" (1.549 m) | Wt 114 lb (51.7 kg) | BMI 21.54 kg/m²

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation at left upper trap,

Non tender to palpation anterior shoulder/bicep and grtr tub

Active range of motion

Flexion 175deg

Abduction 175deg

External rotation 60deg

Internal rotation T12

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left shoulder impingement, persistent

Left biceps tendinitis, s/p steroid injection 2/20/2018, sustained improvement

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

Salon pas patch prn, not needing

Sulindac 200mg bid food, not needing

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue additional physical therapy home exercise program; focus on strengthening, scapular stabilization, to support planned return to work and progression toward usual and customary tasks

Ergonomic assessment of workstation equipment still to be dispensed

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related

04/10/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

conditions.

May return to work modified tasks activity level; to avoid overhead use of the left arm. Anticipate that she will not be able to make significant progress toward return to work usual and customary tasks until ergonomic assessment of workstation equipment is available. May be more appropriate to reserve remaining modified duty days until that time .

Follow up in 2 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status:

Modified Work (Applies to work and home): This patient is placed on modified activity at work (if available) and at home from 4/10/2018 through 4/25/2018

ALLOWED:

Reach above left shoulder:Intermittently (up to 50% of shift).

04/10/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Concurrent Treatment: PT/OT

Other Needs/Restrictions: Anticipate that she will not be able to make significant progress toward return to work usual and customary tasks until ergonomic assessment of workstation equipment is available. May be more appropriate to reserve remaining modified duty days until that time .

Additional Comments: Michelle E Tiu was released from our office on 4/10/2018 at 3:48 PM and has a follow up appointment on 04/24/2018 at 11:10 am. Patient has been advised to arrive 15 minutes prior to her appointment time.

Chief Complaint

Patient presents with

- VAGINAL DISCHARGE

HPI: 41 year old G1P1002 presents for evaluation of vaginal sx.

Had sinus infection. Took azithromycin 2.5 weeks ago. Then was given augmentin when infection not improved.

About 4 days ago started to have vaginal itching/burning. 2 days ago had worse burning with application of soap during shower. Also started to have burning with urination. Denies vaginal odor.

Then started to have spotting 2 days ago. This morning had more bleeding than usual and it was "salmon colored." However she inserted monistat cream in the vagina last night.

LNG IUS inserted 9/2014.

Patient Active Problem List:

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:

04/19/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****REASON FOR PR2:**

Change in treatment plan and Change in work status

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on
10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, she completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to cluster of illness in

04/19/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

optometry department. Currently not needing any pain medications.

She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and improved afterward and is continuing to improve without any waning of effect so far. She also had recent ergonomic assessment of workstation evaluation through Sedgwick; equipment arrived and to be installed within the next 2 weeks. Physical therapy has continued to work on a strengthening program, and she is still making gains and feels stronger. She feels she could try return to work usual and customary tasks.

Currently, the patient points to indicate:

left anterior/biceps shoulder pain that is aching/numbing. Pain is rated at 0-1/10 (1=min & 10= max), intermittent.

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

04/19/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****PHYSICAL EXAMINATION:**

Left shoulder

Stance: protracted

Tender to palpation at left upper trap,

Non tender to palpation anterior shoulder/bicep and grtr tub

Active range of motion

Flexion 175deg

Abduction 180deg

External rotation 60deg

Internal rotation T12

(-) Hawkins

(-) Neers

(-) Speeds

(-) empty can, weak

(-) Biceps II

NEURO

Normal light touch bilateral upper extremity

DTR 2+ bilateral bicep, triceps

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

No orders of the defined types were placed in this encounter.

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left shoulder impingement, persistent

Left biceps tendinitis, s/p steroid injection 2/20/2018, sustained improvement

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

04/19/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

Discontinue Salon pas patch prn, not needing

Discontinue Sulindac 200mg bid food, not needing

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue additional physical therapy home exercise program; focus on strengthening, scapular stabilization, to support planned return to work and progression toward usual and customary tasks

Ergonomic assessment of workstation equipment still to be dispensed

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May trial return to work usual and customary tasks as of 04/20/2018

Follow up in 1-2 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

Work Status:

Modified Work (Applies to work and home): This patient is placed on modified activity at work (if available) and at home from 4/19/2018 through 4/19/2018

04/19/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****ALLOWED:**

Reach above left shoulder:Intermittently (up to 50% of shift).

Concurrent Treatment: PT/OT

Other Needs/Restrictions: Trial of usual and customary tasks on 4/20/2018

Additional Comments: Michelle E Tiu was released from our office on 4/19/2018 at 2:40 PM and has a follow up appointment on 4-24-2018 at 11 10 am at Santa Ann clinic.

Patient has been advised to arrive 15 minutes prior to her appointment time.

04/23/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (group 2 of 2) (continued)****PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT**

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left shoulder impingement, persistent

Left biceps tendinitis, s/p steroid injection 2/20/2018, sustained improvement

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

May use Sulindac 200mg bid food prn pain, not needing

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue additional physical therapy home exercise program; focus on strengthening, scapular stabilization, to support planned return to work and progression toward usual and customary tasks

Ergonomic assessment of workstation equipment still to be dispensed

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Continue trial return to work usual and customary tasks

Follow up in 2-3 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

PHYSICIAN'S PROGRESS NOTES

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:

05/23/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****REASON FOR PR2:**

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Recurrent

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, injured worker completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to cluster of illness in optometry department.

05/23/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and improved afterward and is continuing to improve without any waning of effect so far. She also had recent ergonomic assessment of workstation evaluation through Sedgwick; equipment arrived and some still to be installed within the next few weeks.

Since last visit she did return to work usual and customary tasks with some increased symptoms the first week, helped with some ergonomic assessment of workstation adjustments. She does have some recurrent right shoulder pain at night and cannot lay on right side without pain. She did complete remaining physical therapy visits.

Currently, the patient points to indicate:
left anterior/biceps shoulder pain that is aching/numbing. Pain is rated at 0-2/10 (1=min & 10= max), intermittent.

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs
Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

05/23/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Patient Instructions

Your Kaiser Permanente Care Instructions

Ankle Sprain: Care Instructions

Your Care Instructions

An ankle sprain can happen when you twist your ankle. The ligaments that support the ankle can get stretched and torn. Often the ankle is swollen and painful.

Ankle sprains may take from several weeks to several months to heal. Usually, the more pain and swelling you have, the more severe your ankle sprain is and the longer it will take to heal. You can heal faster and regain strength in your ankle with good home treatment.

05/30/2018 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)**

It is very important to give your ankle time to heal completely, so that you do not easily hurt your ankle again.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Prop up your foot on pillows as much as possible for the next 3 days. Try to keep your ankle above the level of your heart. This will help reduce the swelling.
- Follow your doctor's directions for wearing a splint or elastic bandage. Wrapping the ankle may help reduce or prevent swelling.
- Your doctor may give you a splint, a brace, an air stirrup, or another form of ankle support to protect your ankle until it is healed. Wear it as directed while your ankle is healing. Do not remove it unless your doctor tells you to. After your ankle has healed, ask your doctor whether you should wear the brace when you exercise.
- Put ice or cold packs on your injured ankle for 10 to 20 minutes at a time. Try to do this every 1 to 2 hours for the next 3 days (when you are awake) or until the swelling goes down. Put a thin cloth between the ice and your skin.
- You may need to use crutches until you can walk without pain. If you do use crutches, try to bear some weight on your injured ankle if you can do so without pain. This helps the ankle heal.
- Take pain medicines exactly as directed.
 - ◆ If the doctor gave you a prescription medicine for pain, take it as prescribed.
 - ◆ If you are not taking a prescription pain medicine, ask your doctor if you can take an over-the-counter medicine.
- If you have been given ankle exercises to do at home, do them exactly as instructed. These can promote healing and help prevent lasting weakness.

When should you call for help?

Call your doctor now or seek immediate medical care if:

- Your pain is getting worse.
- Your swelling is getting worse.
- Your splint feels too tight or you are unable to loosen it.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You are not getting better after 1 week.

Your Kaiser Permanente Care Instructions

Ankle Sprain: Rehab Exercises

Your Care Instructions

Here are some examples of typical rehabilitation exercises for your condition. Start each exercise slowly. Ease off the exercise if you start to have pain.

Your doctor or physical therapist will tell you when you can start these exercises and which ones will work best for you.

How to do the exercises

"Alphabet" exercise

1. Trace the alphabet with your toe. This helps your ankle move in all directions.

Side-to-side knee swing exercise

1. Sit in a chair with your foot flat on the floor.
2. Slowly move your knee from side to side. Keep your foot pressed flat.
3. Continue this exercise for 2 to 3 minutes.

Towel curl

1. While sitting, place your foot on a towel on the floor. Scrunch the towel toward you with your toes.
2. Then use your toes to push the towel away from you.
3. To make this exercise more challenging you can put something on the other end of the towel. A can of soup is about the right weight for this.

Towel stretch

1. Sit with your legs extended and knees straight.
2. Place a towel around your foot just under the toes.
3. Hold each end of the towel in each hand, with your hands above your knees.
4. Pull back with the towel so that your foot stretches toward you.
5. Hold the position for at least 15 to 30 seconds.
6. Repeat 2 to 4 times a session. Do up to 5 sessions a day.

Ankle eversion exercise

1. Start by sitting with your foot flat on the floor. Push your foot outward against a wall or a piece of furniture that doesn't move. Hold for about 6 seconds, and relax. Repeat 8 to 12 times.
2. After you feel comfortable with this, try using rubber tubing looped around the outside of your feet for resistance. Push your foot out to the side against the tubing, and then count to 10 as you slowly bring your foot back to the middle. Repeat 8 to 12 times.

Isometric opposition exercises

1. While sitting, put your feet together flat on the floor.

05/30/2018 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)**

2. Press your injured foot inward against your other foot. Hold for about 6 seconds, and relax. Repeat 8 to 12 times.
3. Then place the heel of your other foot on top of the injured one. Push down with the top heel while trying to push up with your injured foot. Hold for about 6 seconds, and relax. Repeat 8 to 12 times.

Resisted ankle inversion

1. Sit on the floor with your good leg crossed over your other leg.
2. Hold both ends of an exercise band and loop the band around the inside of your affected foot. Then press your other foot against the band.
3. Keeping your legs crossed, slowly push your affected foot against the band so that foot moves away from your other foot. Then slowly relax.
4. Repeat 8 to 12 times.

Resisted ankle eversion

1. Sit on the floor with your legs straight.
2. Hold both ends of an exercise band and loop the band around the outside of your affected foot. Then press your other foot against the band.
3. Keeping your leg straight, slowly push your affected foot outward against the band and away from your other foot without letting your leg rotate. Then slowly relax.
4. Repeat 8 to 12 times.

Resisted ankle dorsiflexion

1. Tie the ends of an exercise band together to form a loop. Attach one end of the loop to a secure object or shut a door on it to hold it in place. (Or you can have someone hold one end of the loop to provide resistance.)
2. While sitting on the floor or in a chair, loop the other end of the band over the top of your affected foot.
3. Keeping your knee and leg straight, slowly flex your foot to pull back on the exercise band, and then slowly relax.
4. Repeat 8 to 12 times.

Single-leg balance

1. Stand on a flat surface with your arms stretched out to your sides like you are making the letter "T." Then lift your good leg off the floor, bending it at the knee. If you are not steady on your feet, use one hand to hold on to a chair, counter, or wall.
2. Standing on the leg with your affected ankle, keep that knee straight. Try to balance on that leg for up to 30 seconds. Then rest for up to 10 seconds.
3. Repeat 6 to 8 times.
4. When you can balance on your affected leg for 30 seconds with your eyes open, try to balance on it with your eyes closed.
5. When you can do this exercise with your eyes closed for 30 seconds and with ease and no pain, try standing on a pillow or piece of foam, and repeat steps 1 through 4.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

SUBJECTIVE COMPLAINTS:**Chief Complaint:**

SHOULDER PAIN

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on
10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Recurrent

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, injured worker completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to

06/28/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

to cluster of illness in optometry department.

She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and much improved afterward and is continuing to improve without any waning of effect of injection so far. She also had ergonomic assessment of workstation evaluation through Sedgwick; equipment arrived and some still to be installed within the next few weeks; no report available.

Since last visit she did continue return to work usual and customary tasks with some increased symptoms the first week, helped with some ergonomic assessment of workstation adjustments. She did attend additional 4/6 physical therapy visits at new clinic (In Motion) and has been taught scapular setting, now has improving ability to overhead activities

Currently, the patient points to indicate:

left anterior/biceps shoulder pain that is aching/numbing. Pain is rated at 0-2/10 (1=min & 10= max), intermittent.

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

Breastfeeding? No

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

06/28/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation at left grtr tub

Non tender to palpation anterior shoulder/bicep, acromioclavicular joint

Active range of motion

Flexion 175deg

Abduction 170deg

External rotation 60deg

Internal rotation T12

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

REFERRAL PHYSICAL THERAPY / OCCUPATIONAL THERAPY

Order Comments:

Reason: Additional Physical Therapy

The patient is being referred for additional physical therapy for formal education is scapular setting and cuff strength, treatment of scapular dyskinesis and education home exercise program, something was not done at her earlier PT visits

(M75.42) IMPINGEMENT SYNDROME OF LEFT SHOULDER

(M75.22) TENDINITIS OF LEFT BICEPS TENDON

06/28/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

s/p steroid injection

Frequency: 1-2 times a week for 3-6 weeks - total of 6 treatments.

Patient has completed approximately 14 therapy treatments to date and reported decrease in pain and improved function in ADLs, decreased medication usage, and decrease work restrictions. Patient reports decrease in pain by 70-80%. Physical therapy is appropriate per MTUS Chronic Pain Medical Treatment guidelines, Physical Medicine Treatment.

Referral Priority: Routine

Referral Type: Outpatient Service

Referral Reason: Specialty Services Required

Referral Location: *ORANGE COUNTY

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left shoulder impingement, persistent

Left biceps tendinitis, s/p steroid injection 2/20/2018, with sustained improvement

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

May use Sulindac 200mg bid food prn pain, not currently needing

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Request placed for additional physical therapy home exercise program; continue focus on strengthening, scapular stabilization for over chest level work, and to support return to work usual and customary tasks

Some ergonomic assessment of workstation equipment still to be dispensed

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Continue return to work usual and customary tasks

Follow up in 4-6 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on
10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Unchanged

Treatment Since Last Visit:

States she has been back to work full duty for the past few months. Has been tolerating for the most part but still not ergonomically set up at her work station. Indicates ergonomic work station materials were just received and is awaiting engineering to set up. Reports she has been having neck pain for the past week and feels it is due to her work station. Her neck is not part of her claim and she indicates she is going to

08/09/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Speak with the carrier regarding her neck.

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Michelle E Tiu is a 41 year old female with left shoulder pain and discomfort. Left shoulder pain unchanged and is mild intermittent. Patient reports new onset neck pain due to overcompensation from her reported non ergonomic work station.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

PHYSICAL EXAMINATION:

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

Cardiovascular: Intact distal pulses.

Musculoskeletal:

Left shoulder: She exhibits tenderness. She exhibits normal range of motion and no swelling.

Cervical back: She exhibits decreased range of motion and tenderness. She exhibits no swelling.

Neurological: She is alert and oriented to person, place, and time. She has normal sensation and normal reflexes. Coordination normal.

Skin: Skin is warm and dry.

Psychiatric: Affect and judgment normal.

Nursing note and vitals reviewed.

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

TREATMENT PLAN:

08/09/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****Medications:**

The medication(s)/supplies/radiological studies ordered this visit:

No orders of the defined types were placed in this encounter.

Treatment Rendered:

1. Patient reports new onset neck pain due to her poor work station. She was informed that her neck is not part of her current claim and would need to speak with the carrier to file a new claim or add to existing claim. This report is billable due to a change in treatment plan or work restrictions and/or diagnosis or treating under future medical care and last visit was more than 45 days.
2. Home exercise program.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

REVIEW OF SYSTEMS: (if applicable)

OBJECTIVE:

BP 112/74 | Pulse 68 | Temp 99 °F (37.2 °C) (Temporal) | Wt 50.3 kg (110 lb 14.3 oz) | BMI 20.95 kg/m²

Physical Exam

Constitutional: She is well-developed, well-nourished, and in no distress.

HENT:

Head: Normocephalic and atraumatic.

Eyes: Conjunctivae are normal.

Neck: No spinous process tenderness and no muscular tenderness present. Decreased range of motion present.

Pulmonary/Chest: Effort normal.

Musculoskeletal:

Right shoulder: She exhibits normal range of motion, no tenderness, no bony tenderness, no swelling and no effusion.

Neurological: She is alert.

Skin: Skin is warm and dry.

Psychiatric: Affect normal.

Nursing note and vitals reviewed.

ASSESSMENT/PLAN:

1. NECK PAIN

Suspect muscle spasm. Since symptoms are not improving naproxen, will try Toradol. Patient advised to avoid NSAIDs for 24 hours. Will prescribe omeprazole for GI prophylaxis. Advise rest and heat.

Orders Placed This Encounter

- Ketorolac Inj 30 mg (TORADOL)

This is a Cross Concentration Medication.

- Omeprazole (PRILOSEC) 20 mg Oral CPDR SR Cap

Sig: 1 CAP PO DAILY 30 MINS BEFORE BREAKFAST while taking naproxen

Dispense: 56

Refill: 0

Order Specific Question:

Is this medication for a workers' compensation condition?

Author Type: Physician
 Creation Time: 8/13/2018 3:02 PM

History:

Patient presents with:

RASH: chest and neck area x1 day per patient

SHOULDER PAIN: right shoulder pain x2 weeks per patient

Pain in right upper medial periscapular area radiating to shoulder and up to neck. Worse with moving her neck. Feels tight. Using Naproxen. Trying acupuncture as well. Not using the muscle relaxer. On worker's comp for left shoulder problem. Supposed to go back to work tomorrow. Got Toradol shot 4 days ago, but didn't help. Stopped muscle relaxer Robaxin since it wasn't helping. Unsure if naproxen is helping, but might be. Seen last Thursday for same complaint.

Physical Exam

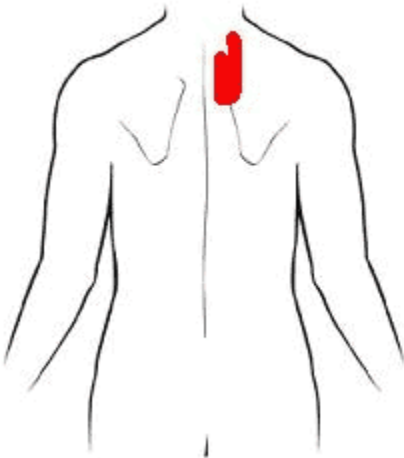

Constitutional: She is well-developed, well-nourished, and in no distress.

Neck: Normal range of motion and full passive range of motion without pain. Neck supple. No spinous process tenderness and no muscular tenderness present. No neck rigidity. Normal range of motion present.

Musculoskeletal:

Cervical back: She exhibits normal range of motion, no tenderness and no bony tenderness.

Back:

Neurological: She has normal motor skills, normal sensation, normal strength and normal reflexes.

Reflex Scores:

Bicep reflexes are 2+ on the right side and 2+ on the left side.

Strength/reflexes/sensation tested in upper extremities

Patient Instructions

Your Kaiser Permanente Care Instructions

Shoulder Blade: Exercises

Your Care Instructions

Here are some examples of typical exercises for your condition. Start each exercise slowly. Ease off the exercise if you start to have pain. Your doctor or physical therapist will tell you when you can start these exercises and which ones will work best for you.

08/13/2018 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)****How to do the exercises****Shoulder roll**

1. Stand tall with your chin slightly tucked. Imagine that a string at the top of your head is pulling you straight up.
2. Keep your arms relaxed. All motion will be in your shoulders.
3. Shrug your shoulders up toward your ears, then up and back. Circle your shoulders down and back, like you're sliding your hands down into your back pants pockets.
4. Repeat the circles at least 2 to 4 times.
5. This exercise is also helpful anytime you want to relax.

Lower neck and upper back stretch

1. With your arms about shoulder height, clasp your hands in front of you.
2. Drop your chin toward your chest.
3. Reach straight forward so you are rounding your upper back. Think about pulling your shoulder blades apart. You'll feel a stretch across your upper back and shoulders. Hold for at least 6 seconds.
4. Repeat 2 to 4 times.

Triceps stretch

1. Reach your arm straight up.
2. Keeping your elbow in place, bend your arm and reach your hand down behind your back.
3. With your other hand, apply gentle pressure to the bent elbow. You'll feel a stretch at the back of your upper arm and shoulder. Hold about 6 seconds.
4. Repeat 2 to 4 times with each arm.

Shoulder stretch

1. Relax your shoulders.
2. Raise one arm to shoulder height, and reach it across your chest.
3. Pull the arm slightly toward you with your other arm. This will help you get a gentle stretch. Hold for about 6 seconds.
4. Repeat 2 to 4 times.

Shoulder blade squeeze

1. Sit or stand up tall with your arms at your sides.
2. Keep your shoulders relaxed and down, not shrugged.
3. Squeeze your shoulder blades together. Hold for 6 seconds, then relax.
4. Repeat 8 to 12 times.

Straight-arm shoulder blade squeeze

1. Sit or stand tall. Relax your shoulders.
2. With palms down, hold your elastic tubing or band straight out in front of you.
3. Start with slight tension in the tubing or band, with your hands about shoulder-width apart.
4. Slowly pull straight out to the sides, squeezing your shoulder blades together. Keep your arms straight and at shoulder height. Slowly release.
5. Repeat 8 to 12 times.

Rowing

1. Anchor your elastic tubing or band at about waist height. Take one end in each hand.
2. Sit or stand with your feet hip-width apart.
3. Hold your arms straight in front of you. Adjust your distance to create slight tension in the tubing or band.
4. Slightly tuck your chin. Relax your shoulders.
5. Without shrugging your shoulders, pull straight back. Your elbows will pass alongside your waist.

Pull-downs

1. Anchor your elastic tubing or band in the top of a closed door. Take one end in each hand.

08/13/2018 - Office Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)**

2. Either sit or stand, depending on what is more comfortable. If you feel unsteady, sit on a chair.
3. Start with your arms up and comfortably apart, elbows straight. There should be a slight tension in the tubing or band.
4. Slightly tuck your chin, and look straight ahead.
5. Keeping your back straight, slowly pull down and back, bending your elbows.
6. Stop where your hands are level with your chin, in a "goalpost" position.
7. Repeat 8 to 12 times.

Chest T stretch

1. Lie on your back. Raise your knees so they are bent. Plant your feet on the floor, hip-width apart.
2. Tuck your chin, and relax your shoulders.
3. Reach your arms straight out to the sides. If you don't feel a mild stretch in your shoulders and across your chest, use a foam roll or a tightly rolled blanket under your spine, from your tailbone to your head.
4. Relax in this position for at least 15 to 30 seconds while you breathe normally. Repeat 2 to 4 times.
5. As you get used to this stretch, keep adding a little more time until you are able to relax in this position for 2 or 3 minutes. When you can relax for at least 2 minutes, you only need to do the exercise 1 time per session.

Chest goalpost stretch

1. Lie on your back. Raise your knees so they are bent. Plant your feet on the floor, hip-width apart.
2. Tuck your chin, and relax your shoulders.
3. Reach your arms straight out to the sides.
4. Bend your arms at the elbows, with your hands pointed toward the top of your head. Your arms should make an L on either side of your head. Your palms should be facing up.
5. If you don't feel a mild stretch in your shoulders and across your chest, use a foam roll or tightly rolled blanket under your spine, from your tailbone to your head.
6. Relax in this position for at least 15 to 30 seconds while you breathe normally. Repeat 2 to 4 times.
7. Each day you do this exercise, add a little more time until you can relax in this position for 2 or 3 minutes. When you can relax for at least 2 minutes, you only need to do the exercise 1 time per session.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

Patient Instructions

Your Kaiser Permanente Care Instructions

Hives: Care Instructions

Your Care Instructions

Hives are raised, red, itchy patches of skin. They are also called wheals or welts. They usually have red borders and pale centers. Hives range in size from ¼ inch to 3 inches or more across. They may seem to move from place to place on the skin. Several hives may form a large area of raised, red skin.

You can get hives after an insect sting, after taking medicine or eating certain foods, or because of infection or stress. Other causes include plants, things you breathe in, makeup, heat, cold, sunlight, and latex.

You cannot spread hives to other people. Hives may last a few minutes or a few days, but a single spot may last less than 36 hours.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Avoid whatever you think may have caused your hives, such as a certain food or medicine. However, you may not know the cause.
- Put a cool, wet towel on the area to relieve itching.
- Take an over-the-counter antihistamine, such as diphenhydramine (Benadryl), cetirizine (Zyrtec), or loratadine (Claritin), to help stop the hives and calm the itching. Read and follow directions on the label. These medicines can make you feel sleepy. Do not drive while using them.
- Stay away from strong soaps, detergents, and chemicals. These can make itching worse.

08/20/2018 - Office Visit in FAMILY PRACTICE (continued)

Patient Instructions (continued)

When should you call for help?

Call 911 anytime you think you may need emergency care. For example, call if:

- You have symptoms of a severe allergic reaction. These may include:
 - ◆ Sudden raised, red areas (hives) all over your body.
 - ◆ Swelling of the throat, mouth, lips, or tongue.
 - ◆ Trouble breathing.
 - ◆ Passing out (losing consciousness). Or you may feel very lightheaded or suddenly feel weak, confused, or restless.

Call your doctor now or seek immediate medical care if:

- You have symptoms of an allergic reaction, such as:
 - ◆ A rash or hives (raised, red areas on the skin).
 - ◆ Itching.
 - ◆ Swelling.
 - ◆ Belly pain, nausea, or vomiting.
- You get hives after you start a new medicine.
- Hives have not gone away after 24 hours.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You do not get better as expected.

Where can you learn more?

Change in treatment plan

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

08/23/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, injured worker completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to cluster of illness in optometry department.

She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and much improved afterward and is continuing to improve without any waning of effect of injection so far.

Since last visit she has continued return to work usual and customary tasks and completed some ergonomic assessment of workstation adjustments; equipment finally available to be installed. She did attend additional 4/6 physical therapy visits at new clinic (In Motion) and has been taught scapular setting, now has improving ability to overhead activities. Left shoulder pain now mostly gone.

08/23/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

In the interval she developed right neck pain and stiffness without an interval injury, and did treat under health plan with meds, acupuncture, and then developed a hives reaction (related to medication given?) and is now on prednisone. She developed some low back pain related to using her chair at work because seat pan is too deep for her which results in her feet not reaching the ground if she sits against the back rest.

Currently, the patient points to indicate:
left anterior/biceps shoulder pain that is mostly resolved.

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs
Alleviated by: ibuprofen

Associated signs and symptoms:
No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats
Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:
There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant
Cardiovascular: Normal pulse and rhythm
Respiratory: No respiratory distress
Neurological: No muscle wasting, tremor, or coordination deficits
Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder
Stance: protracted

08/23/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Tender to palpation at left grtr tub
Non tender to palpation anterior shoulder/bicep, acromioclavicular joint
Active range of motion
Flexion 175deg
Abduction 170deg
External rotation 60deg
Internal rotation T12
(-) Hawkins
(-) Neers
(-) Speeds
(-) empty can
(-) Biceps II

NEURO

Normal light touch bilateral upper extremity

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left shoulder impingement, almost resolved

Left biceps tendinitis, s/p steroid injection 2/20/2018, with sustained improvement

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

08/23/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

May use Sulindac 200mg bid food prn pain, not currently needing
Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.
Continue physical therapy home exercise program
Some ergonomic assessment of workstation equipment still to be dispensed
Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.
Continue return to work usual and customary tasks

Follow up in 6 weeks; anticipate release at that time once ergonomic assessment of workstation equipment available.
Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Clinical Notes (continued)

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Treatment:

NSAIDS

Ice

Physical therapy

PHONE VISIT DOCUMENTATION:

Indicates she is under investigation for her right shoulder pain and neck pain that she reports she came in to be seen for in this clinic on 8/9/18. She was informed at that time that her neck is not part of her current claim and would need to speak with the carrier to file a new claim or add to existing claim. She was kept on full duty for her left shoulder but her neck and right shoulder was not addressed. She reports she was seen under health plan and was taken off work. States that her work was not accepting of this because they believed she was put back to full duty by this clinic. Her neck and right shoulder was not addressed by this clinic and was addressed under her health plan.

ASSESSMENT:

Encounter Diagnoses

Code	Name	Primary?
• M75.42	IMPINGEMENT SYNDROME OF LEFT SHOULDER	

PLAN:

No orders of the defined types were placed in this encounter.

1. Patient requesting documentation regarding her 8/9/18 visit to give to investigators regarding neck and right shoulder pain.
2. Home exercise program for left shoulder.
3. Patient has follow up with Dr. Greenwood on 10/11/18.

Full work today.

Other Needs/Restrictions:

Additional Comments:

Time spent with patient or guardian over the phone was 10 minutes.

Released from care

Chief Complaint:

No chief complaint on file.

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Recurrent

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, since last visit she had been released with respect to right neck and shoulder and continued return to work usual and customary tasks. Her right neck and upper trap symptoms began to bother her again several weeks ago without history of trauma or reinjury, and have not settled fully.

08/30/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

She has been doing massage and stretching, and Salon pas patches.

Recall, in the past she did get benefit from trigger point injections and she has completed 12/12 acupuncture as well as 12/12 physical therapy. She has been too sore recently to participate self management with yoga and stretches. She has no trouble laying on the side hs.

Currently, the patient points to indicate:

Right upper trap and posterolateral shoulder pain

Aggravated by: neck rotation right

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

08/30/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Stance: protracted neck
Tender to palpation right upper trap/lev scap with associated increased tone
Decreased AP mobility C3-5 on right with associated tenderness to palpation over pillars
Not tender to palpation midline
Painless active range of motion
Flexion chin to chest, extension 40 deg

Dear Michelle E Tiu,

The following message from Dr Grace Chang is in response to your recent e-mail.

Good morning and thank you for your e-mail reply. I have scheduled you a TAV (telephone appointment visit) on 9/27/2018 at 4:50 PM with Dr Chang Broderick, Grace to discuss your concern/request. She will be calling you at this phone 949-892-8322. If you need to change the date or time please call the appointment center at 888-988-2800 or let us know. Thank you.

WHAT IS A TELEPHONE APPOINTMENT.

The TAV (Telephone Appointment Visit) is more than a casual phone conversation with your physician. It is for your convenience, and an added enhancement to your care. Like any other regularly scheduled visit- a time is set, your medical issues are discussed and are then recorded in your medical record.

If for some reason you cannot take the phone call at the scheduled appointment time, please call early to reschedule your Telephone Appointment Visit (just as you would if you needed to cancel or reschedule a Medical Office visit).

We are committed to calling you within 30 minutes of the scheduled appointment time. If your clinician is unable to place the call in the specified time we will do our best to reschedule a time that is convenient.

HOW TO PREPARE FOR YOUR TELEPHONE APPOINTMENT VISIT:

Telephone Appointment visits typically last from 5-10 minutes. Plan to be near the phone at

09/10/2018 - Patient Message in INTERNAL MEDICINE (continued)**Messages (continued)**

the scheduled time so you don't miss the call.

Be ready with the information the clinician needs to know about your medical condition, like your blood pressure or blood glucose levels, as well as the medications that you are taking.

To get the most from your appointment, please write down, in advance, the questions you wish to ask your clinician.

If you have any further needs, please contact us via E-mail or by calling (888) 988-2800 and leaving a message for your provider.

Best regards,
Louie Samson LVN, on behalf of Dr Grace Chang

Work Comp

9/10/2018

Chief Complaint: Left shoulder pain

Michelle E Tiu is a 41 year old female presented to the clinic for a follow up evaluation of the left biceps tendinitis

SUBJECTIVE: Last left shoulder injection on 2/20/18 provided significant pain improvement.

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)**Clinical Notes (continued)**

Patient been receiving acupuncture and cupping treatment.

Patient complaint of excessive reaching for diagnostic instruments while at work (optometrist)

OBJECTIVE:

Tenderness to palpation bicipital groove and posterolateral shoulder

Shoulder ROM:

flexion 140 (passive 160) - positive painful arc

ext rot (arm at side) 50

Shoulder Muscle Strength: Deltoid 5/5, Supraspinatus 4/5, Infraspinatus/Teres Minor 5/5, Subscapularis 5/5.

Positive Neer's and Yergason

Negative empty can, lag sign and belly press

Light touch intact median, ulnar, radial nerve distribution.

ASSESSMENT: Left biceps tendinitis - with cuff weakness

PLAN: Patient declined injection and physical therapy

1. Provide rotator cuff exercise information in the after visit summary.

2. Advise obtaining Ergonomic evaluation

RTC: As needed If symptoms does not improved, may consider repeating bicipital vs subacromial space injection

Patient Instructions:

Avoid reaching and overhead activities.

The patient indicates understanding of these issues and agrees with the plan.

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

Clinical Notes (continued)

Patient Instructions

Rotator Cuff: Exercises

Your Kaiser Permanente Care Instructions

Here are some examples of typical rehabilitation exercises for your condition. Start each exercise slowly. Ease off the exercise if you start to have pain.

Your doctor or physical therapist will tell you when you can start these exercises and which ones will work best for you.

How to do the exercises

Pendulum swing

Note: If you have pain in your back, do not do this exercise.

1. Hold on to a table or the back of a chair with your good arm. Then bend forward a little and let your sore arm hang straight down. This exercise does not use the arm muscles. Rather, use your legs and your hips to create movement that makes your arm swing freely.
2. Use the movement from your hips and legs to guide the slightly swinging arm back and forth like a pendulum (or elephant trunk). Then guide it in circles that start small (about the size of a dinner plate). Make the circles a bit larger each day, as your pain allows.
3. Do this exercise for 5 minutes, 5 to 7 times each day.
4. As you have less pain, try bending over a little farther to do this exercise. This will increase the amount of movement at your shoulder.

Posterior stretching exercise

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

Patient Instructions (continued)

1. Hold the elbow of your injured arm with your other hand.
2. Use your hand to pull your injured arm gently up and across your body. You will feel a gentle stretch across the back of your injured shoulder.
3. Hold for at least 15 to 30 seconds. Then slowly lower your arm.
4. Repeat 2 to 4 times.

Up-the-back stretch**Rotator Cuff: Exercises (Page 2 of 11)**

Note: Your doctor or physical therapist may want you to wait to do this stretch until you have regained most of your range of motion and strength. You can do this stretch in different ways. Hold any of these stretches for at least 15 to 30 seconds. Repeat them 2 to 4 times.

1. Put your hand in your back pocket. Let it rest there to stretch your shoulder.
2. With your other hand, hold your injured arm (palm outward) behind your back by the wrist. Pull your arm up gently to stretch your shoulder.
3. Next, put a towel over your other shoulder. Put the hand of your injured arm behind your back. Now hold the back end of the towel. With the other hand, hold the front end of the towel in front of your body. Pull gently on the front end of the towel. This will bring your hand farther up your back to stretch your shoulder.

Overhead stretch

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

Patient Instructions (continued)

1. Standing about an arm's length away, grasp onto a solid surface. You could use a countertop, a doorknob, or the back of a sturdy chair.
2. With your knees slightly bent, bend forward with your arms straight. Lower your upper body, and let your shoulders stretch.
3. As your shoulders are able to stretch farther, you may need to take a step or two backward.
4. Hold for at least 15 to 30 seconds. Then stand up and relax. If you had stepped back during your stretch, step forward so you can keep your hands on the solid surface.
5. Repeat 2 to 4 times.

Rotator Cuff: Exercises (Page 3 of 11)**Shoulder flexion (lying down)**

Note: To make a wand for this exercise, use a piece of PVC pipe or a broom handle with the broom removed. Make the wand about a foot wider than your shoulders.

1. Lie on your back, holding a wand with both hands. Your palms should face down as you hold the wand.
2. Keeping your elbows straight, slowly raise your arms over your head. Raise them until you feel a stretch in your shoulders, upper back, and chest.
3. Hold for 15 to 30 seconds.
4. Repeat 2 to 4 times.

Shoulder rotation (lying down)

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

Patient Instructions (continued)

© Healthwise, Incorporated

Note: To make a wand for this exercise, use a piece of PVC pipe or a broom handle with the broom removed. Make the wand about a foot wider than your shoulders.

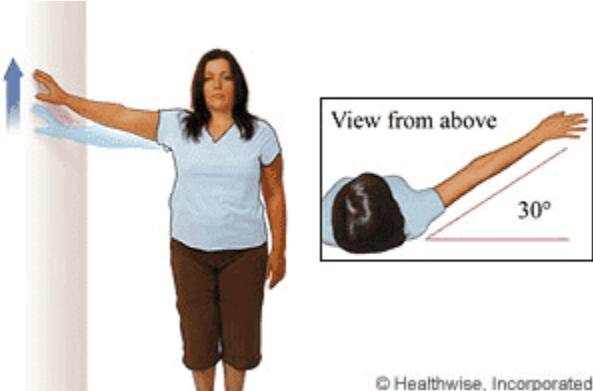

1. Lie on your back. Hold a wand with both hands with your elbows bent and palms up.

Rotator Cuff: Exercises (Page 4 of 11)

2. Keep your elbows close to your body, and move the wand across your body toward the sore arm.

3. Hold for 8 to 12 seconds.

4. Repeat 2 to 4 times.

Wall climbing (to the side)

© Healthwise, Incorporated

Note: Avoid any movement that is straight to your side, and be careful not to arch your back. Your arm should stay about 30 degrees to the front of your side.

1. Stand with your side to a wall so that your fingers can just touch it at an angle about 30 degrees toward the front of your body.

2. Walk the fingers of your injured arm up the wall as high as pain permits. Try not to shrug your shoulder up toward your ear as you move your arm up.

3. Hold that position for a count of at least 15 to 20.

4. Walk your fingers back down to the starting position.

5. Repeat at least 2 to 4 times. Try to reach higher each time.

Rotator Cuff: Exercises (Page 5 of 11)**Wall climbing (to the front)**

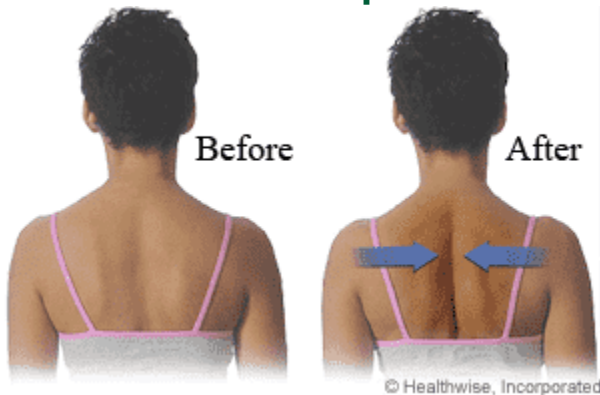

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

Patient Instructions (continued)

Note: During this stretching exercise, be careful not to arch your back.

1. Face a wall, and stand so your fingers can just touch it.
2. Keeping your shoulder down, walk the fingers of your injured arm up the wall as high as pain permits. (Don't shrug your shoulder up toward your ear.)
3. Hold your arm in that position for at least 15 to 30 seconds.
4. Slowly walk your fingers back down to where you started.
5. Repeat at least 2 to 4 times. Try to reach higher each time.

Shoulder blade squeeze

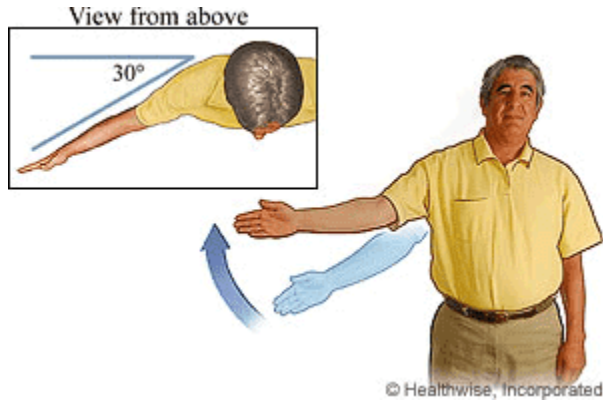

1. Stand with your arms at your sides, and squeeze your shoulder blades together. Do not raise your shoulders up as you squeeze.
2. Hold 6 seconds.
3. Repeat 8 to 12 times.

Rotator Cuff: Exercises (Page 6 of 11)**Scapular exercise: Arm reach**

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

Patient Instructions (continued)

1. Lie flat on your back. This exercise is a very slight motion that starts with your arms raised (elbows straight, arms straight).
2. From this position, reach higher toward the sky or ceiling. Keep your elbows straight. All motion should be from your shoulder blade only.
3. Relax your arms back to where you started.
4. Repeat 8 to 12 times.

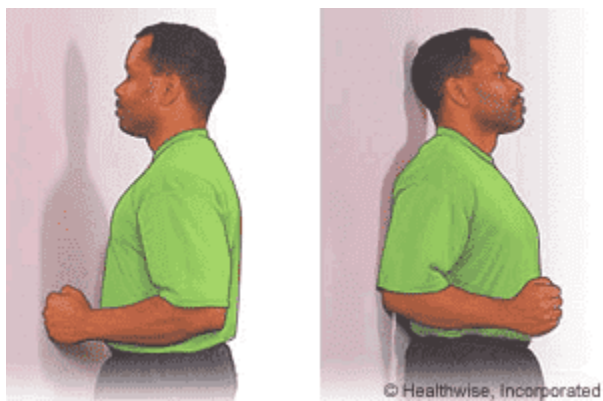

Arm raise to the side

Note: During this strengthening exercise, your arm should stay about 30 degrees to the front of your side.

1. Slowly raise your injured arm to the side, with your thumb facing up. Raise your arm 60 degrees at the most (shoulder level is 90 degrees).
2. Hold the position for 3 to 5 seconds. Then lower your arm back to your side. If you need to, bring your "good" arm across your body and place it under the elbow as you lower your injured arm. Use your good arm to keep your injured arm from dropping down too fast.

Rotator Cuff: Exercises (Page 7 of 11)

3. Repeat 8 to 12 times.
4. When you first start out, don't hold any extra weight in your hand. As you get stronger, you may use a 1-pound to 2-pound dumbbell or a small can of food.

Shoulder flexor and extensor exercise

Note: These are isometric exercises. That means you contract your muscles without actually moving.

- **Push forward (flex):** Stand facing a wall or doorjamb, about 6 inches or less back. Hold your injured arm against your body. Make a closed fist with your thumb on top. Then gently push your hand forward into the wall with about 25% to 50% of your strength. Don't let your body move backward as you push. Hold for about 6 seconds. Relax for a few seconds. Repeat 8 to 12 times.

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

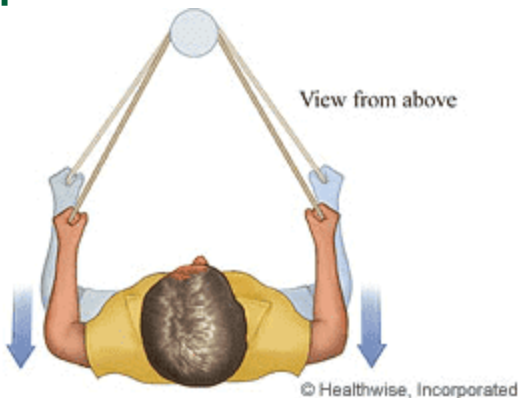

Patient Instructions (continued)

• **Push backward (extend):** Stand with your back flat against a wall. Your upper arm should be against the wall, with your elbow bent 90 degrees (your hand straight ahead). Push your elbow gently back against the wall with about 25% to 50% of your strength. Don't let your body move forward as you push. Hold for about 6 seconds. Relax for a few seconds. Repeat 8 to 12 times.

Scapular exercise: Wall push-ups**Rotator Cuff: Exercises (Page 8 of 11)**

Note: This exercise is best done with your fingers somewhat turned out, rather than straight up and down.

1. Stand facing a wall, about 12 inches to 18 inches away.
2. Place your hands on the wall at shoulder height.
3. Slowly bend your elbows and bring your face to the wall. Keep your back and hips straight.
4. Push back to where you started.
5. Repeat 8 to 12 times.
6. When you can do this exercise against a wall comfortably, you can try it against a counter. You can then slowly progress to the end of a couch, then to a sturdy chair, and finally to the floor.

Scapular exercise: Retraction

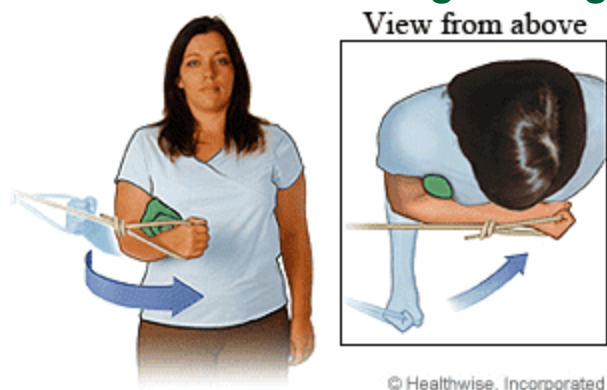

Note: For this exercise, you will need elastic exercise material, such as surgical tubing or Thera-Band.

1. Put the band around a solid object at about waist level. (A bedpost will work well.) Each hand should hold an end of the band.
2. With your elbows at your sides and bent to 90 degrees, pull the band back. Your shoulder blades should move toward each other. Then move your arms back where you started.
3. Repeat 8 to 12 times.
4. If you have good range of motion in your shoulders, try this exercise with your arms lifted out to

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

Patient Instructions (continued)

the sides. Keep your elbows at a 90-degree angle. Raise the elastic band up to about shoulder level. Pull the band back to move your shoulder blades toward each other. Then move your arms back where you started.

Rotator Cuff: Exercises (Page 9 of 11)**Internal rotator strengthening exercise**

1. Start by tying a piece of elastic exercise material to a doorknob. You can use surgical tubing or Thera-Band.
2. Stand or sit with your shoulder relaxed and your elbow bent 90 degrees. Your upper arm should rest comfortably against your side. Squeeze a rolled towel between your elbow and your body for comfort. This will help keep your arm at your side.
3. Hold one end of the elastic band in the hand of the painful arm.
4. Slowly rotate your forearm toward your body until it touches your belly. Slowly move it back to where you started.
5. Keep your elbow and upper arm firmly tucked against the towel roll or at your side.
6. Repeat 8 to 12 times.

External rotator strengthening exercise

1. Start by tying a piece of elastic exercise material to a doorknob. You can use surgical tubing or Thera-Band. (You may also hold one end of the band in each hand.)

Rotator Cuff: Exercises (Page 10 of 11)

2. Stand or sit with your shoulder relaxed and your elbow bent 90 degrees. Your upper arm should rest comfortably against your side. Squeeze a rolled towel between your elbow and your body for comfort. This will help keep your arm at your side.

09/10/2018 - Orthopedic Office Visit in ORTHOPEDICS (continued)

Patient Instructions (continued)

3. Hold one end of the elastic band with the hand of the painful arm.
4. Start with your forearm across your belly. Slowly rotate the forearm out away from your body. Keep your elbow and upper arm tucked against the towel roll or the side of your body until you begin to feel tightness in your shoulder. Slowly move your arm back to where you started.
5. Repeat 8 to 12 times.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test

results and keep a list of the medicines you take.

SUBJECTIVE:

Michelle E Tiu is a 41 year old female

Chief Complaint

Patient presents with

- RASH
chest x 2-3 weeks

09/11/2018 - Office Visit in FAMILY PRACTICE (continued)

Clinical Notes (continued)

Patient here with complains of rash on the face and the upper chest for the last few weeks and was seen in urgent care about 10 days ago and was prescribed prednisone with some help but continues to have the rash and denies any worsening symptoms or lip swelling or tongue swelling or throat swelling or difficulty breathing or difficulty swallowing and denies any nausea or vomiting or diarrhea. Denies any changes in her food or medications recently but has been exposed to a lot of dust due to construction at home and is allergic to dust mite based on her allergy panel done in 2014. Complains of itchy eyes along with the rash and has been taking Zyrtec 2 pills daily which made her drowsy but did not help the rash and tried Claritin once a day with no help and has been taking Benadryl at night with not much help.

--- This documentation is for State Form (PR2) ---

SUBJECTIVE COMPLAINTS:**REASON FOR PR2:**

Released from care

Chief Complaint:

SHOULDER PAIN

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Indicates she developed right shoulder pain while at work this week due to repetitive

10/25/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

reaching across her work station to turn off light up to 60 times during the day. Also reports that she has to swing the machine overhead and that it increases her right shoulder pain. She states that several of her colleagues are also having shoulder issues and that they have had ergonomic work station evaluations.

Diagnostic Testing

Right shoulder XR 9/16/2016

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Treatment:

NSAIDS

Ice

Physical therapy

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Resolved

Michelle E Tiu is a 41 year old female with the following subjective factors:

Patient Complaints:

Recall, since last visit she had been released with respect to right neck and shoulder and continued return to work usual and customary tasks. She did get benefit from trigger point injections and she has completed 12/12 acupuncture as well as 12/12 physical therapy.

Her right neck and upper trap symptoms began to bother her again several weeks ago without history of trauma or reinjury, and has much improved after physical therapy. She has been back to participating self management with yoga and stretches. She has no trouble laying on the side hs.

Currently, the patient points to indicate:

Right upper trap discomfort, mild

Aggravated by: neck rotation right

Alleviated by: physical therapy, rest

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No associated valsava pain

Patient denies history of ulcers, reflux, or renal function impairment.

10/25/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)**REVIEW OF SYSTEMS:**

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No nausea, vomiting, or abdominal pain

Neurologic: No numbness or tingling of extremities

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

Breastfeeding? No

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

Objective Findings:

Cervical spine

Stance: protracted neck

Tender to palpation minimally over right upper trap/lev scap

Not tender to palpation midline

Painless active range of motion

Flexion chin to chest, extension 40 deg

Rotation 75 deg right, 75 deg left

(-) Spurling's

Right shoulder

Stance: protracted

Tender minimally to palpation at right grtr tub

Non tender to palpation acromioclavicular, bic groove

M75.81 TENDINITIS OF RIGHT SHOULDER

M79.18 CERVICAL MYOFASCIAL PAIN SYNDROME

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

No orders of the defined types were placed in this encounter.

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of right shoulder and recurrent upper right trap pain that she relates to an incident at work.

History and physical examination was consistent with

Cervical myofascial pain, almost resolved

Right shoulder impingement, resolved

PLAN:

Discontinue ibuprofen 600mg with food tid, not needed

Continue physical therapy home exercise program, cuff strengthening, scapular stabilization

No additional treatment needed at this time

May continue return to work usual and customary tasks

Release from care

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Change in treatment plan

Chief Complaint:

SHOULDER PAIN

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on
10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

11/01/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****TREATMENT PROGRESS:**

The patient's symptoms from the previous visit are:

Improved

Michelle E Tiu is a 42 year old female with the following subjective factors:

Patient Complaints:

Recall, injured worker completed approximately 12/12 physical therapy, and also completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to cluster of illness in optometry department.

She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and has maintained partial improvement without full waning of effect of injection so far.

Since last visit she has continued return to work usual and customary tasks and completed some ergonomic assessment of workstation adjustments; but she still has a persistent low grade anterior shoulder pain. She did complete approximately 12 physical therapy visits and has been taught scapular setting, and is working on applying what was taught to her daily work activity. Pain is manageable without meds; ice helps

Currently, the patient points to indicate:

left anterior/biceps shoulder pain that is mostly resolved, up to 3-4/10 at times. Can be OK on a weekend when not a work

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

The medication(s)/supplies/radiological studies ordered this visit:

11/01/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****Orders Placed This Encounter**PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 41 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left shoulder impingement, almost resolved, but some persistent symptoms with work activity

Left biceps tendinitis, s/p steroid injection 2/20/2018, with sustained improvement

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

May use over the counter ibuprofen or acetaminophen for pain, not currently needing

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue physical therapy home exercise program, scap stabilizers; request patient focus on utilizing scapular stabilization techniques while performing her job tasks, and assessing how she does her job tasks.

She will talk to co-workers with similar stature to see how they accomplish the same job tasks

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Continue return to work usual and customary tasks

Follow up in 6 weeks; possible release at that time versus permanent and stationary evaluation if symptoms persist

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

11/01/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****---End of Progress Notes---****Work Status:**

Full work today.

Other Needs/Restrictions:

Additional Comments: Michelle E Tiu was released from our office on 11/1/2018 at 5:31 PM and has a follow up appointment on 12/13/18 at 4:30pm. Patient has been advised to arrive 15 minutes prior to her appointment time.

If you have any questions, please call our office at the following numbers:
(714) 644-6450

Neurological ROS: negative for - numbness/tingling

OBJECTIVE:

Temp 97.9 °F (36.6 °C) (Temporal) | Ht 1.549 m (5' 1") | LMP (LMP Unknown) | Breastfeeding? No

General Appearance: well developed, well nourished, in no acute distress.

12/13/2018 - Office Visit in PODIATRY (continued)

Clinical Notes (continued)

Pleasant
B/L feet
Pedal pulses palpable 2/4 and normal, normal CRT
No edema, erythema or cyanosis
Protective threshold intact
Hyperkeratosis located sub left 2nd metatarsal head, + central nucleated core measures 3mm, no underlying ulceration seen, no associated deformity.
+ TTP at the callus site
Minimal plantar fat pad atrophy
Digital muscle strength is graded 5/5.

X-ray: Left foot weight-bearing x-ray reviewed and no foreign body noted

Assessment:

1. ACQUIRED KERATODERMA

Plan:

- Exam, findings, etiology and treatment options were discussed. Conservative (shoegear changes, activities modification, pain medications prn, orthotics, padding/splint, callus care).
- Following verbal consent the hyperkeratotic lesion(s) was debrided with a 15 blade, well tolerated and without incident.
- Advised regular use of a pumice stone and moisturizing to prevent recurrence.

Patient Instructions

Patient Education

Your Kaiser Permanente Care Instructions**Corns and Calluses: Care Instructions****Your Care Instructions**

Corns and calluses are areas of thick, hard, dead skin. They form to protect your skin from injury. Corns usually form where toes rub together. Calluses often form on the hands or feet. They may form wherever the skin rubs against something, such as shoes.

In most cases, you can take steps at home to care for a corn or callus.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Wear shoes and other footwear that fit correctly and are roomy. This will reduce rubbing and give corns or calluses time to heal.
- Use protective pads, such as moleskin, to cushion the callus or corn.
- Soften the corn or callus and remove the dead skin by using over-the-counter products such as salicylic acid. If you have a condition that causes problems with blood flow (such as peripheral vascular disease) or loss of feeling in your feet (such as diabetes), talk to your doctor before you try any home treatment.
- Soak your corn or callus in warm water, and then use a pumice stone to rub dead skin away.
- Wash your feet regularly, and rub lotion into your feet while they are still moist. Dry skin can cause a callus to crack and bleed.
- Never cut the corn or callus yourself, especially if you have problems with blood flow to your legs or feet.

When should you call for help?

Call your doctor now or seek immediate medical care if:

- You have signs of infection, such as:
 - ◆ Increased pain, swelling, warmth, or redness around the corn or callus.
 - ◆ Red streaks leading from the corn or callus.
 - ◆ Pus draining from the corn or callus.
 - ◆ A fever.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You do not get better as expected.

Where can you learn more?

Go to <http://www.kp.org>

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

12/13/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 42 year old female with the following subjective factors:

Patient Complaints:

Recall, injured worker completed completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to cluster of illness in optometry department. She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and she has maintained improvement in left anterior shoulder pain without waning of effect of injection so far.

Since last visit she has continued return to work usual and customary tasks and has completed ergonomic assessment of workstation adjustments. She did also complete approximately 12 physical therapy visits and has been taught scapular setting, and is working on applying what was taught to her daily work activity.

Her left upper trap/lat neck discomfort is not present most days, and is usually manageable without oral meds; but she often uses salon pas on the left neck and upper trap towards the end of most weeks

Currently, the patient points to indicate:
left anterior/biceps shoulder pain is resolved
Left upper trap slight ache

12/13/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs
Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation at left grtr tub, left upper trap

Non tender to palpation anterior shoulder/bicep, acromioclavicular joint

Active range of motion

Flexion 175deg

Abduction 170deg

External rotation 60deg

Internal rotation T12

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER
M75.22 TENDINITIS OF LEFT BICEPS TENDON

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 42 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left shoulder impingement, almost resolved, but with mild persistent symptoms at the end of work week
Left biceps tendinitis, s/p steroid injection 2/20/2018, with sustained improvement

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articulate cartilage

PLAN:

May use over the counter ibuprofen or acetaminophen for pain, not currently needing; also using topicals prn
Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue physical therapy home exercise program, scap stabilizers; continue utilizing scapular stabilization techniques while performing her job tasks, and assessing how she performs her job tasks. She will talk to co-workers with similar stature to see how they accomplish the same job tasks

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Continue return to work usual and customary tasks

12/13/2018 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Follow up in 6-8 weeks; anticipate release from care next visit
Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

Change in treatment plan, Response to request for information and Request for Authorization

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 42 year old female with the following subjective factors:

Patient Complaints:

Recall, injured worker completed completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to to cluster of illness in optometry department. She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and she has good improvement in left anterior shoulder pain.

Since last visit she has continued return to work usual and customary tasks and has completed ergonomic assessment of workstation adjustments. She did also complete approximately 12 physical therapy visits and was taught scapular setting, and is applying that to her daily work activity. She has not been needing salon pas on the left neck and upper trap towards the end of most weeks.

Her left upper trap/lat neck discomfort is not present most days, and is usually manageable without oral meds; but she had a recurrence of left anterior shoulder discomfort yesterday without new injury or incident, with pain up to 4/10, and now today pain is rated 5/10.

Currently, the patient points to indicate:
left anterior/biceps and lateral shoulder discomfort - dull/achy quality
Left upper trap slight ache

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs
Alleviated by: ibuprofen

Associated signs and symptoms:
No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

02/14/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation (mild) at left grtr tub, minimal at left upper trap

Non tender to palpation anterior shoulder/bicep, acromioclavicular joint

Active range of motion

Flexion 170deg

Abduction 170deg

External rotation 60deg

Internal rotation T12

(-) Hawkins

DTR 2+ bilateral bicep, triceps

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

02/14/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****TREATMENT PLAN:****Medications:**

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter

PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS REPORT

Naproxen (NAPROSYN) 500 mg Oral Tab

Sig: Take 1 tablet by mouth 2 times a day with food as needed for pain (Workers comp)

Dispense: 60

Refill: 0

Order Specific Question: Is this medication for a workers' compensation condition?

Answer: Yes

Treatment Rendered:**ASSESSMENT:**

Michelle E Tiu is a 42 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left biceps tendinitis, s/p steroid injection 2/20/2018, with sustained improvement for 1 year, now with mild recurrence of symptoms

Left shoulder impingement, almost resolved, but with mild persistent symptoms at the end of work week

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articular cartilage

PLAN:

Naproxen 500mg bid food prn pain

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue physical therapy home exercise program 3 times a week, scap stabilizers; continue utilizing scapular stabilization techniques while performing her job tasks, and assessing how she performs her job tasks. She did talk to co-workers with similar stature to see how they accomplish the same job tasks and avoiding repetitive reaching with her left arm

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Continue return to work usual and customary tasks

Plan release from care next 1-2 visits (versus permanent and stationary evaluation if her symptoms persist)

Follow up in 2-3 weeks

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed

02/14/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

understanding.

1. I explained that there is available a face-to-face appointment with a provider to render the same health care services as this telehealth encounter.
2. The patient consented to receive health care services via telehealth for this encounter.

03/18/2019 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

This report electronically signed by Sumudu N Dissanayake, MD on 10/14/2017 3:01 PM

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 42 year old female with the following subjective factors:

Patient Complaints:

Recall, injured worker completed completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to to cluster of illness in optometry department. She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and she has good improvement in left anterior shoulder pain.

She has continued return to work usual and customary tasks and has completed ergonomic assessment of workstation adjustments. She did also complete approximately 12 physical therapy visits and was taught scapular setting, and is applying that to her daily work activity.

Since last visit her left upper trap/lat neck discomfort is not present most days, and is usually manageable without oral meds; and the recurrence of left anterior shoulder discomfort a few weeks ago has resolved. She does still report some hand and arm numbness, especially hs, and flicks for relief

03/18/2019 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Currently, the patient points to indicate:

left anterior/biceps pain is resolved

Left lateral shoulder discomfort - dull/achy quality, 0-2/10

Left upper trap slight ache

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs

Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Full Duty

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Active range of motion

Flexion 170deg

Abduction 170deg

03/18/2019 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

R20.2 PARESTHESIA

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This EncounterWRIST NEOPRENE BRACE W ALUMINUM COCKUP SUPPORT, LEFTWRIST NEOPRENE BRACE W ALUMINUM COCKUP SUPPORT, RIGHT

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 42 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left biceps tendinitis, s/p steroid injection 2/20/2018, with sustained improvement for 1 year, with infrequent symptoms, not presistent

Left shoulder impingement, almost resolved, but with mild persistent symptoms at the end of work week

Paresthesia, nocturanl; myofascial versus CTS

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articular cartilage

PLAN:

Continue Naproxen 500mg bid food prn pain

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue physical therapy home exercise program 3 times a week, scap stabilizers; continue utilizing scapular stabilization techniques while performing her job tasks, and assessing how she performs her job tasks. She did talk to co-workers with similar stature to see how they accomplish the same job tasks and avoiding repetitive reaching with her left arm

Cock up splint given - for paresthesia

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Continue return to work usual and customary tasks

Plan permanent and stationary evaluation next visit

03/18/2019 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Follow up in 2-4 weeks

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Hello Michelle E Tiu

Good morning. Our office received a message in regards to clarifying if you were due for a physical. It does appear that you are due at this time. Please contact the appointment center at 833-574-2273 and they will assist you in scheduling this. At the time of your appointment, your primacy care physician will address any additional testing or labs that are required. Thank you and have a great day!

Sincerely,

SIARA FULTON LVN on behalf of Dr. Atoian, Ani Ardashian (M.D.)

Michelle E Tiu is a 42 year old female

Chief Complaint

Patient presents with

- TELEPHONE TREATMENT ADVICE

Patient complains of numbness in both hands; mainly at night when laying down; affecting fingers 2-4. Has been wearing a wrist brace; not much improvement.

ASSESSMENT:

NUMBNESS OF SKIN

Note: appointment booked for patient to be further evaluated; possible cervical spine etiology.

Medication side effect, benefit and alternatives discussed.

Pt agrees and understands the above plan.

Pt instructed to follow up if worsening of any of the above symptoms occur.

MAXIMUM MEDICAL IMPROVEMENT REPORT

--- This document is for State Form (PR4) ---

Translation required: No

Last Date Worked: 5/2/2019

Maximum Medical Improvement Date: 5/2/2019

DESCRIPTION OF HOW INJURY/ILLNESS OCCURRED:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign

05/02/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

PATIENT COMPLAINTS:**Chief Complaint:**

SHOULDER INJURY and PRESCRIPTION REFILL REQUESTED

Patient Complaints:

Michelle E Tiu is a 42 year old female complains of intermittent left shoulder tightness and hand numbness Pain level is 0/10 currently, intermittently up to 4/10 severity rating.

Injured worker denies any radicular symptoms or radiation of the pain symptoms, but she does report experiencing left and right arm numbness in bed at night. No numbness or weakness during her work activity. She denies flicking the hands for relief. She denies any swelling. Injured worker has been performing her Activities of Daily Living (ADL) independently. Injured worker has been performing regular tasks at work.

The injured worker reports some sleep disturbance secondary to hand numbness in bed at night

RELEVANT MEDICAL HISTORY:**Review of Systems:**

The Regional Review of Systems Questionnaire was completed by the patient and I reviewed

General: No fever, chills, or sweats

Eyes: No eye pain, blurry vision, double vision, or visual disturbances

Ears, Nose, Throat, and Mouth: No pain, hearing loss, or ear ringing

Cardiovascular: No chest pain or palpitations

Respiratory: No wheezing, cough, or shortness of breath

Gastrointestinal: No nausea, vomiting, or abdominal pain and No rectal bleeding or black stools

Genitourinary: No painful urination and No blood in urine

Skin: No rash, redness, or swelling

Psychiatric: No anxiety or depression

Endocrine: No unexplained weight loss, excessive thirst or excessive urination

Hematology: No easy bruising or bleeding

Allergy: No known environmental allergies

Past Medical, Family, and Surgical History:

Electronic Medical Records Reviewed: Yes

Patient did not have a prior work related injury to the same body part(s).

Patient did not have a prior non-work related injury to the same body part(s).

Family History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

05/02/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Past Surgical History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

Social History:

Work Status before this visit: Full Duty

History:

Occupational history: The injured worker was employed as an optometrist with Kaiser Permanente for approximately 15 years at time of injury. No other employers at time of injury.

TREATMENT PERTAINING TO THIS INJURY/ILLNESS:**Treatment History and Medications:**

The injured worker was treated conservatively with anti-inflammatory medications, physical therapy and acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reported the employer was planning to change work stations nationally due to cluster of illness in optometry department. In her particular work rooms, counter height was higher than ideal for an individual of her stature. When symptoms of left shoulder pain persisted, MRI was considered but this was not possible secondary to contraindication to MRI related to non-industrial medical issue. She was then referred to orthopedics and saw Dr. Richards on 2/20/2018, with bicipital groove steroid injection given, and she reported subsequent very good improvement in left anterior shoulder pain.

She did subsequently return to work usual and customary tasks and completed ergonomic assessment of workstation adjustments.

Toward the end of course of treatment for the industrial injuries she reported her left upper trap/lateral neck discomfort was not present most days, and was usually manageable without oral medications and a recurrence of left anterior shoulder discomfort had resolved. She did still report some hand and arm numbness, especially at night in bed and if laying on the left side. As noted above, there was no flick sign reported. She continued return to work usual and customary tasks at her pre injury job with the pre injury employer.

DIAGNOSTIC TESTS RESULTS: (X-ray/Imaging/Laboratory/etc.)**Diagnostic Tests and Results:**

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/**IMPRESSION:**

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

CURRENT ENCOUNTER DIAGNOSIS/DIAGNOSES:

M75.22 TENDINITIS OF LEFT BICEPS TENDON
G54.0 LEFT THORACIC OUTLET SYNDROME
M79.18 MYOFASCIAL PAIN SYNDROME

Other Pertinent Diagnosis/Diagnoses:**IMPAIRMENT RATING:**

Upper extremity impairment rating was performed based on AMA Guides, 5th edition. Chapter 16, Figure(s)

05/02/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

16-1a, 16-1b, and Table(s) 16-3 were used.

There is no amputation impairment. There is no right upper extremity peripheral nerve system impairment. There is no right upper extremity peripheral vascular system impairment.

Per AMA Guides, 5th edition, Chapter 16, Figure(s) 16-40, 16-43, 16-46, there is no regional impairment based on range of motion of the bilateral shoulder for extension, abduction, adduction, or external rotation.

Per AMA Guides, 5th edition, Chapter 16, Figure(s) 16-40, 16-43, 16-46, there is 1% and 2% regional impairment based on range of motion of the left shoulder for flexion and internal rotation respectively.

Per AMA Guides, 5th edition, Chapter 16, Section 16.7d, for syndromes involving upper extremity attributed to tendinitis, fasciitis, or epicondylitis, 'although these conditions may be persistent for some time, they are not given a permanent impairment rating unless there is some other factor that must be considered.' For this reason, no specific impairment rating was assigned to the biceps tendinitis diagnosis.

There was no grip strength deficit; in addition there would be no anticipated grip strength deficit that would be relevant to the industrial diagnoses in this examiner's opinion.

Per AMA Guides, 5th edition, Chapter 16, Figure(s) 16-1b, the above corresponds to 3% regional upper extremity impairment, which per Table 16-3 corresponds to 2% impairment of the whole person.

Upper extremity impairment rating: 2% impairment of the whole person

APPORTIONMENT

This permanent disability is directly caused by an injury or illness arising out of, and in the course of, employment.

This permanent disability is not caused, in whole or in part, by other factors besides this industrial injury or illness, including any prior industrial injury or illness.

FUTURE MEDICAL TREATMENT:

Future Medical Care Needed: Yes

EXPECTED FUTURE ORDERS:

NSAIDS: I expect no more than 2-3 refills per year and each refill up to 40 tablets

Topical Medications: I expect no more than 2-3 refills per year

Physical Therapy: No more than 6 visits each set, no more than 2-3 sets per year

Consult: Should flare-ups not subside with the treatment listed above, the patient should have access to orthopedic consultation

FUNCTIONAL CAPACITY ASSESSMENT:

A Formal Functional Capacity Evaluation was not obtained.

05/02/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****ACTIVITIES ALLOWED:**

There are no environmental restrictions in place.

The patient can return to regular duty.

Work restrictions related to current industrial injury:

None

THE FOLLOWING DOCUMENTS HAVE BEEN REVIEWED IN PREPARING THIS REPORT:

I have reviewed the Kaiser electronic medical record for this patient.

I have not reviewed any non-Kaiser medical record(s) for this patient.

I have not reviewed any written job description(s) for this patient.

I have not reviewed any other documentation.

DURATION AND LOCATION OF VISIT:

Time spent with patient (Including physical exam): 50 minutes

Examination took place in the specialty of Occupational Medicine and Physical Medicine & Rehabilitation (PM&R) located at Orange County, California.

---End of DWC Form State Form (PR4) (Rev. 06-05)---

Work Status:

Full work today.

Other Needs/Restrictions: Patient is at permanent and stationary and maximal medical improvement on 5/2/2019 with future medical anticipated and no permanent restrictions.

Additional Comments: Michelle E Tiu was released from our office on 5/2/2019 at 5:45 PM and has a

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: Injured worker reports developing left posterior shoulder pain after having been a different room at a different facility that required her to work much more often with forceful overhead pushign and pulling of the exam equipment using her left shoulder and as she continued to work there she developed increasing left shoulder pain

Patient was made permanent and stationary by Dr. Greenwood on 05/02/2019:

'CURRENT ENCOUNTER DIAGNOSIS/DIAGNOSES:

06/20/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

M75.22 TENDINITIS OF LEFT BICEPS TENDON
G54.0 LEFT THORACIC OUTLET SYNDROME
M79.18 MYOFASCIAL PAIN SYNDROME

Other Pertinent Diagnosis/Diagnoses:

IMPAIRMENT RATING:

...

Upper extremity impairment rating: 2% impairment of the whole person

...

FUTURE MEDICAL TREATMENT:

EXPECTED FUTURE ORDERS:

NSAIDS: I expect no more than 2-3 refills per year and each refill up to 40 tablets

Topical Medications: I expect no more than 2-3 refills per year

Physical Therapy: No more than 6 visits each set, no more than 2-3 sets per year

Consult: Should flare-ups not subside with the treatment listed above, the patient should have access to orthopedic consultation

FUNCTIONAL CAPACITY ASSESSMENT:

A Formal Functional Capacity Evaluation was not obtained.

The patient can return to regular duty.

Work restrictions related to current industrial injury:

None'

Diagnostic Testing:

XR LEFT SHOULDER 2 OR MORE VIEWS, Oct 14, 2017

COMPARISON: No previous study available.

FINDINGS/

IMPRESSION:

No acute fracture is identified. The alignment is normal. No significant joint disease is noted. No significant soft tissue abnormality is identified.

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

06/20/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 42 year old female with the following subjective factors:

Patient Complaints:

Recall, injured worker completed completed 6/6 acupuncture. She also had an ergonomic assessment of workstation, with internal KP ergonomist having reviewed the workstation and patient reports the employer planning to change work set up nationally due to to cluster of illness in optometry department. She saw Dr. Richards 2/20/2018, with bicipital groove steroid injection given, and she has good improvement in left anterior shoulder pain.

Since last visit she has continued return to work usual and customary tasks and has completed ergonomic assessment of workstation adjustments. She did also complete approximately 12 physical therapy visits and was taught scapular setting, and is applying that to her daily work activity.

Today she returns after several weeks vacation. She does have some hand numbness at night if lays on the side; no flicking and no numbness when driving or using her telephone. Hand numbness also when she reaches overhead

Currently, the patient points to indicate:
left anterior/biceps and lateral shoulder discomfort - dull/achy quality intermittent; none at present
Left upper trap slight ache; neck feels "tight

Aggravated by: posterior deltoid exercises in past, empty can; can now lay on left side hs
Alleviated by: ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva, neck pain

Patient denies history of ulcers, (+) reflux, no renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Full Duty

06/20/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)**OBJECTIVE FINDINGS:**

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Cardiovascular: Normal pulse and rhythm

Respiratory: No respiratory distress

Neurological: No muscle wasting, tremor, or coordination deficits

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Left shoulder

Stance: protracted

Tender to palpation (mild) at left grtr tub, minimal at left upper trap

Non tender to palpation anterior shoulder/bicep, acromioclavicular joint

Active range of motion

Flexion 170deg

Abduction 170deg

DIAGNOSES:

M75.42 IMPINGEMENT SYNDROME OF LEFT SHOULDER

M75.22 TENDINITIS OF LEFT BICEPS TENDON

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

Orders Placed This Encounter PHYS SPECIAL REPORT, PR-2 TREATING PHYS'S PROGRESS

06/20/2019 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****REPORT**

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 42 year old female who presents with complaints of left shoulder pain that she relates to an incident at work.

History and physical examination was consistent with:

Left biceps tendinitis, s/p steroid injection 2/20/2018, with sustained improvement for 1 year, now with mild recurrence of symptoms

Left shoulder impingement, almost resolved, but with mild persistent symptoms at the end of work week

Thoracic outlet syndrome, functional

Limited ultrasound examination of the left shoulder, 1/24/2018

Unremarkable acromioclavicular joint

Subscapularis normal appearance

Biceps tendon normal appearance, in groove, no fluid in sheath

Supraspinatus tendon some mild non-homogeneity, no subdeltoid bursal fluid

Humeral head, normal appearance with normal thickness of articular cartilage

PLAN:

Naproxen 500mg bid food prn pain

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Information given on stretches for thoracic outlet syndrome, if not improving will order formal physical therapy (TWH/UofT handout)

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions

Continue return to work usual and customary tasks

Follow up prn under future medical allowance

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

---	-----------------------	---

Dear Ms. Michelle E Tiu,

The office staff of Obstetrics & Gynecology have attempted to call you multiple times at 949-892-8322, in regards to your Telephone appointment with a Registered Nurse for further Gynecology & Birth Control assistance, but have been unsuccessful in reaching you. We apologize for the inconvenience, but we have closed your encounter at this time.

If you still need further assistance please call Appointment Center @ 1-888-988-2800.

At any time, if you believe that you or anyone your know are suffering from a life threatening condition, psychiatric emergency or one that may result in the loss of limb or function, then you should call 911 or proceed to the nearest Emergency Department with a driver.

Sincerely,

MARITES SOLORZANO, RN
Kaiser Permanente
Women's Health Department

IUD Patient Information

Please be aware of sensitive time window for insertion of Intrauterine Device (IUD)- Mirena/ Paragard must be within day 1-7 of next period.

Please call the Appointment Center @ 888-988-2800 on your first day of period, the appointment center is open 365 days a year, from 7AM- 7PM, please verbally stress to

07/31/2019 - Patient Message in WOMENS HEALTH CENTER/OB-GYN (continued)

Messages (continued)

Appointment Call Center Agent that your message is Urgent and needs to be sent as a Urgent Message to the OB/GYN department for IUD- Mirena/ Paragard insertion and that day you call is the first day of your period.

Your Care Instructions for DAY OF IUD- Mirena/ Paragard insertion:

Day of appointment: Take Ibuprofen 600 mg by mouth with food one hour prior to scheduled appointment time, to prevent any pain/ discomfort during or after minor procedure.

Also, a urine sample will be collected at time of appointment for a routine pregnancy test prior to insertion of IUD.

- What is an intrauterine device (IUD)?
- The intrauterine device (IUD) is used to prevent pregnancy. It's a small, plastic, T-shaped device. Your doctor places the IUD in your uterus.
- You have a choice between a progesterone IUD (Mirena) and a copper IUD (Paragard)
- IUD-Mirena® Progesterone: 0.1% rate of pregnancy in first year of use. It is the IUD that lasts 5 years. It is not only very effective contraception but has the benefit of making your period lighter and less painful. It is easily reversible. It is a simple office visit to place. During the first 3 months of use, there is often very irregular, mild vaginal bleeding and occasional mild cramps. With time, most women have very light periods and often even no period at all with continued use. This often results in a significant reduction in any menstrual cramps). Once you have it, you don't have to do anything else to prevent pregnancy.
- IUD-Paragard® aka Copper T IUD: 0.8% rate of pregnancy in first year of use. It is the IUD that lasts 10 years. It is easily reversible. It may increase menstrual flow and increase menstrual cramps. If you already have heavy or painful periods, this may not be the best choice for you. It is a simple office visit to place. Once you have it, you don't have to do anything else to prevent pregnancy.
- What are the advantages of an IUD?
- An IUD is one of the most effective methods of birth control.
- It prevents pregnancy for 5 to 10 years, depending on the type. You don't have to worry about birth control during this time.
- It's safe to use while breast-feeding.
- IUDs don't contain estrogen. So you can use an IUD if you don't want to take estrogen or can't take estrogen because you have certain health problems or concerns.
- An IUD is convenient. It is always providing birth control. You don't need to remember to take a pill or get a shot. You don't have to interrupt sex to protect against pregnancy.
- A Mirena® IUD may reduce heavy bleeding and cramping.
- What are the disadvantages of an IUD?
- An IUD doesn't protect against sexually transmitted infections (STIs), such as herpes or HIV/AIDS. If you aren't sure if your sex partner might have an STI, use a condom to protect

07/31/2019 - Patient Message in WOMENS HEALTH CENTER/OB-GYN (continued)

Messages (continued)

against disease.

- A Paragard® aka Copper IUD may cause periods with more bleeding and cramping.
- You have to see a doctor to have an IUD inserted and removed.
- You have to check to see if the string is in place.
- Where can you learn more?
- Go to <http://www.kp.org>
- Enter B486 in the search box to learn more about "Learning About Birth Control: Intrauterine Device (IUD)."

IUD Insertion Information

- Your Care Instructions
- To prepare for your visit please review the patient information on IUD's.
- The IUD insertion will be similar to a pap smear exam. You will need to provide a urine specimen for a pregnancy test prior to the IUD insertion. There are important safety guidelines for scheduling the IUD insertion that must be followed. The preferred time for IUD insertion is while you are on your menstrual cycle. There will be some discomfort, primarily menstrual type cramping during the exam. You should take motrin/ibuprofen 600mg orally with food one hour prior to scheduled appointment. It is important to eat something prior to your visit.
- A string tied to the end of the IUD hangs down through the cervix into the vagina but neither you or your partner should be aware of this.
- Some women may have more pain and cramping after insertion.
- How can you care for yourself at home?
- You may experience some mild cramping and light bleeding (spotting) for days. You may take an over-the-counter pain medicine, such as acetaminophen (Tylenol), ibuprofen (Advil, Motrin), and naproxen (Aleve) if needed. Read and follow all instructions on the label.
- You may use a heating pad set on low on your belly for pain.
- Do not take two or more pain medicines at the same time unless the doctor told you to. Many pain medicines have acetaminophen, which is Tylenol. Too much acetaminophen (Tylenol) can be harmful.
- If the IUD comes out, save it and call your doctor. Be sure to use another form of birth control while the IUD is out.
- Use latex condoms to protect against sexually transmitted infections (STIs), such as gonorrhea and chlamydia. An IUD does not protect you from STIs. Having one sex partner (who does not have STIs and does not have sex with anyone else) is a good way to avoid STIs.
- Where can you learn more?
- Go to <http://www.kp.org>
- Enter U681 in the search box to learn more about "Intrauterine Device (IUD) Insertion: Care Instructions."

Contraceptive Options

Typical Failure Rates (Pregnancy Rate) During the First Year of a Contraceptive Method

Permanent Male Sterilization (aka Vasectomy): Most effective method of contraception with only 0.15% of pregnancies occurring in first year of proper follow-up (1 in 750 women). Vasectomy is usually performed in the office under local anesthetic. Your partner is not considered sterile until he has had follow-up semen analyses that confirm sperm-free ejaculates. You may call appointment center at 888-988-2800 to schedule an appointment for your spouse.

Permanent Female Sterilization: Most effective method of contraception for women with only 0.5% of pregnancies occurring in first year of proper follow-up [Options include Essure Tubal Sterilization (0.1%--most effective female sterilization method), Post-Cesarean Section Tubal Sterilization, or Laparoscopic Tubal Sterilization]. These are all permanent and not meant to be reversed. In fact reversal is often not possible.

Essure is a non-surgical permanent tubal sterilization procedure performed transvaginally in the office under only oral and local anesthetic with no incisions. It may be done as soon as 8 weeks postpartum or 4-6 weeks post abortion. It is our preferred method of female tubal sterilization in Kaiser Orange County as it is safer, has a much quicker recovery, involves no incisions, and does not require any general anesthetic. Currently it is being offered at Sand Canyon Medical Offices, Garden Grove Medical Offices, and Kraemer Medical Offices. You may call the appointment center and leave a message for the "Ob/Gyn Special Procedures RN" if interested in Essure.

If you are considering laparoscopic tubal sterilization or postpartum tubal sterilization, a consultation with a physician is recommended for further counseling. Essure tubal sterilization is more effective, safer, has a much quicker recovery, involves no incisions, and does not require any general anesthetic, and so is our preferred method of sterilization.

Nexplanon® formerly called Implanon (Subdermal Contraceptive Implant): 0.38% rate of pregnancies in first year of use. It is a 3 year implantable progesterone rod placed subdermally (just under the skin) in upper, inner arm. It does result in unpredictable and irregular bleeding patterns. If you are interested, you may call the appointment center and request an appointment with a Nexplanon provider. You can find more information about Nexplanon at www.nexplanon.com

07/31/2019 - Patient Message in WOMENS HEALTH CENTER/OB-GYN (continued)

Messages (continued)

Norplant (NO LONGER MADE)

Depo Provera®: 0.3% rate of pregnancy in first year of use. It is an injection given by a nurse every 12 weeks. The first dose may be given at a visit, or after counseling with your provider and the follow up injections may be done in nurses' clinic. Daily spotting is not uncommon in first 3-6 months, though most women eventually stop having their period with prolonged use. There is not an instant return to fertility once discontinued, so if you desire pregnancy in the next year, you should not use this method usually. Prolonged use of Depo Provera® (2 years or more) has been shown to be associated with reversible bone loss. Call appointment center if you are interested in scheduling a visit with your provider to discuss.

IUD-Mirena® Progesterone: 0.1% rate of pregnancy in first year of use. It is the IUD that lasts 5 years. It is not only very effective contraception but has the benefit of making your period lighter and less painful. It is easily reversible. It is a simple office visit to place. During the first 3-6 months of use, there is often very irregular mild vaginal bleeding and occasional mild cramps. With time, most women have very light periods and sometimes even no period at all with continued use. This often results in a significant reduction in any menstrual cramps. If you are interested, call on the first day of your period to schedule placement. If you don't get your period, leave a message with the nurse to discuss placement scheduling. If you are able to take ibuprofen, we encourage you to take Ibuprofen 600mg one hour prior to appointment time with a little bit of food (so that the ibuprofen does not upset your stomach).

IUD-Paragard® aka Copper T IUD: 0.8% rate of pregnancy in first year of use. It is the IUD that lasts 10 years. Easily reversible. It may increase menstrual flow in first few months of use, occasionally longer. If you already have heavy periods, this may not be the best choice for you. It also may increase cramping as long as it is in place. It is a simple office visit to place. If you are interested, call on the first day of your period to schedule placement. If you don't get your period, leave a message with the nurse to discuss placement scheduling. If you are able to take ibuprofen, we encourage you to take Ibuprofen 600mg one hour prior to appointment time with a little bit of food (so that the ibuprofen does not upset your stomach).

Xulane® (generic form of Ortho Evra®) aka "birth control patch": 0.8% rate of pregnancy in first year of use with optimal use. It may not work as well if you weigh >198 lbs (90kg). It is a patch you apply to your skin and change once per month. It does lead to higher estrogen levels in your blood compared to other methods and thus may increase your risk of serious complications such as blood clots in your legs or lungs or even stroke. For these reasons, most providers don't recommend this method if another option is available to you. If you are interested in this method, we recommend an individual consultation with your provider. Xulane is part of our Kaiser formulary now.

Nuvaring®, aka "vaginal birth control ring": 1.2% rate of pregnancy in first year of use with optimal use. This ring is placed inside the vagina. It is left in place for 3 weeks and then removed. The following week you get your period. Then you place a new Nuvaring vaginally.

07/31/2019 - Patient Message in WOMENS HEALTH CENTER/OB-GYN (continued)**Messages (continued)**

The ring contains the same hormones as most hormonal contraceptives, but at a lower dose. The ring does not need to be removed for sex. If you are interested, you may schedule an appointment with a provider to discuss.

Combined Birth Control Pill: (0.1% perfect use), typically 3% rate of pregnancy in first year of use with optimal use (never forgetting a pill, always taking same time every day). We offer various types, which can be discussed with your provider. Common side-effects are nausea, breast tenderness, and irregular spotting initially that improve with time. If you are interested in this method, we recommend notifying your provider.

If you miss one pill: You should take the forgotten pill as soon as remembered and take today's pill at the regular time.

If you miss two pills in a row: You should take 2 pills as soon as remembered and take 2 pills the next day. You should continue taking the other pills as usual. You should be sure to use a back-up method (e.g. condoms or abstinence) of birth control until you get the next period.

If you miss 3 pills in a row: You should throw away that pack of pills. You should use another method of birth control. You should wait for the next period and restart a new pack of pills and continue using your back-up method of birth control for the first 2 weeks that you are taking the new pack of pills.

Progestin-only Birth Control Pill or "mini pill" aka NoraBE (formulary) or Nor-QD or Micronor® (non-formulary) (0.5% perfect use), typically 5-7% rate of pregnancy in first year of use. This is a great option for someone who is breastfeeding as it will not affect your milk supply. It is also a reasonable option for someone with inadequately controlled hypertension or other contraindication to typical combination birth control pills. Must be taken at same time every day, ideally within 3 hour window each day. If >3 hours late in taking dose, must take dose as soon as you remember and then use back-up contraception for the next 48 hours (e.g. condoms or abstinence). Menses frequently may be irregular or unpredictable with this method as there is no placebo week each month. If you are interested in this method, we recommend notifying your provider.

Condom-male 14% rate of pregnancy with optimal use. Condoms are the only method other than abstinence which will protect against STD's. You may buy these at most drug stores or grocery stores.

Condom-female 21% rate of pregnancy with optimal use. It may be placed even as long as 8 hours prior to sex. You may buy these at many drug stores.

Withdrawal: 19-27% rate of pregnancy with optimal use (meaning 1 in 4 or 5 women become pregnant each year that use this as their birth control method and do so consistently). Some sperm can be released even prior to ejaculation and so it is not considered a reliable method if you really don't want to risk pregnancy.

07/31/2019 - Patient Message in WOMENS HEALTH CENTER/OB-GYN (continued)**Messages (continued)**

Diaphragm: 20% rate of pregnancy with optimal use. It needs to be refitted after every pregnancy or every few years as needed. A spermicidal cream or jelly is also needed to be applied. It must be left in place at least 6 hours following intercourse. It should not be left in the vagina more than 24 hours as it increases the risk of Toxic Shock Syndrome. If you are interested, you should call the appointment center to make an appointment with any provider who fits diaphragms.

Sponge: For women who never have had a baby, it is associated with a 20% rate of pregnancy each year with optimal use. For women who have had a baby, it is associated with a 40% rate of pregnancy each year with optimal use. It may cause some vaginal irritation. It may be found at some drug stores.

Cervical cap: For women who never have had a baby, it is associated with a 20% rate of pregnancy each year with optimal use. For women who have had a baby, it is associated with a 40% rate of pregnancy each year with optimal use. It is a cup shaped latex device that fits over the base of the cervix. Spermicide is needed to fill the cap 1/3 full prior to its insertion. It may be inserted as long as 8 hours before sex and can be left in place as long as 48 hours. If you are interested, you should call the appointment center and ask to make an appointment with a provider comfortable with cervical cap fitting.

Rhythm Method: 25% rate of pregnancy each year with perfect use. It is only an option if you have a very regular and predictable cycle. You may discuss details with any ob/gyn provider by making an appointment with the appointment center. Click this link for more information [Fertility Awareness](#)

Temperature Method: 25% rate of pregnancy each year with perfect use. It is only an option if you have a very regular and predictable cycle. Temperature may vary with any minor illness even.

Spermicides: 26-29% rate of pregnancy each year with perfect use. It may cause vaginal irritation. You may buy at most drug stores.

Chance (no contraception): 85% rate of pregnancy each year.

Filed on: 03/17/20 1833
Resulting lab: SCPMG REGIONAL REFERENCE
LABORATORIES, CLINICAL PATHOLOGY - CHINO HILLS

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	0.84	<=1.10 mg/dL	—	SCPMG
GLOMERULAR FILTRATION RATE	86	mL/min/BSA	—	SCPMG

Comment:
Estimated GFR (eGFR) is calculated by the CKD-Epi formula using serum creatinine, sex, age and race. Result is normalized to a standard body surface area (BSA, 1.73m2). This result is invalid if serum creatinine is not in steady state, if patient is receiving dialysis, or if muscle mass is significantly above or below population norm for age and gender.

-GFR Ranges-
GFR >89 Normal (or CKD1*)
60-89 Mildly reduced (CKD2*)
30-59 Moderately reduced (CKD3 if >3mos)
15-29 Severely reduced (CKD4 if >3mos)
GFR <15 Kidney failure (CKD5 if >3mos)
* GFR >60 is not diagnostic of CKD1 or 2 unless another marker of kidney damage is present (e.g. excessive urine albumin or urine protein)

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	5.3	4.6 - 5.6 %	—	SCPMG

Comment:

A repeatable HbA1c > or = 6.5% is diagnostic of diabetes. A single HbA1c > or = 6.5% can also be confirmed by a fasting plasma glucose measurement > 125 mg/dL, a random plasma glucose > or = 200 mg/dL, or a 2 hour oral glucose tolerance test result > or = 200 mg/dL. Patients with HbA1c of 5.7-6.4% are at increased risk for future diabetes.

Chief Complaint

Patient presents with

- PROCEDURE
callus L foot

SUBJECTIVE: Michelle E Tiu is a 42 year old female with chief complaint(s) of a painful recurrent IPK/callus located under the ball of the left forefoot. History of trauma when she stepped on a cactus but it mostly involved heel. She states the pain is worse when standing and walking barefoot. History of surgery for a giant cell tumor/PVNS from the left lateral ankle with Dr. Byrnes at KBP in 2006, no noted recurrence.

Allergies

Allergen	Reactions
Vicodin [Acetaminophen-Hydrocodone]	Nausea and/or Vomiting

Social History

Tobacco Use	
Smoking Status	Never Smoker
Smokeless Tobacco	Never Used
Tobacco Comment	non smoker

Review of systems:
General ROS: negative for - chills or fever
Musculoskeletal ROS: positive for - callus pain

08/13/2019 - Office Visit in PODIATRY (continued)

Clinical Notes (continued)

Neurological ROS: negative for - numbness/tingling

OBJECTIVE:

BP 118/67 | Pulse 58 | Temp 98.1 °F (36.7 °C) (Temporal) | Ht 1.549 m (5' 1") | Wt 50.1 kg (110 lb 7.2 oz) | BMI 20.87 kg/m²
General Appearance: well developed, well nourished, in no acute distress.

Pleasant
B/L feet
Pedal pulses palpable 2/4 and normal, normal CRT
No edema, erythema or cyanosis
Protective threshold intact
Hyperkeratosis located sub left 2nd metatarsal head, + central nucleated core measures 3mm, no underlying ulceration seen, no associated deformity.
+ TTP at the callus site
Minimal plantar fat pad atrophy
Digital muscle strength is graded 5/5.

X-ray: Left foot weight-bearing x-ray reviewed and no foreign body noted

Assessment:

- 1. ACQUIRED KERATODERMA

Plan:

- Exam, findings, etiology and treatment options were discussed. Conservative (shoegear changes, activities modification, pain medications prn, orthotics, padding/splint, callus care).
- Following verbal consent the hyperkeratotic lesion(s) was debrided with a 15 blade, well tolerated and without incident.
- Advised regular use of a pumice stone and moisturizing to prevent recurrence. We also discussed potentially using a dermal if she is comfortable with the instrument.

Next visit: PRN
Handouts: Callus care

Procedure Orders

1. MAMMO BILAT SCREENING SEQUENTIAL W OR WO COMPUTER AIDED DETECTION ANALYSIS [1104999699]
ordered by Interface, Scal_Radiology at 09/17/19 1220

- MAMMO SCREENING BILAT SEQUENTIAL W OR WO COMPUTER AIDED DETECTION ANALYSIS

BILATERAL DIGITAL SCREENING MAMMOGRAM SEQUENTIAL: 9/17/2019

CLINICAL: Routine Screening digital mammogram, no complaints.
Sequential.

Comparison is made to exam dated: 3/20/2017 Kaiser - Irvine Medical Center. Both breasts are extremely dense, which lowers the sensitivity of mammography.

There are benign calcifications in the right breast.
No significant masses, calcifications, or other findings are seen in either breast.
There has been no significant interval change.

IMPRESSION: BENIGN

There is no mammographic evidence of malignancy. A high risk annual screening mammogram has been ordered.

Mammograms do not detect all breast cancer. Up to 15 percent of breast cancer can't be detected by mammography. Patients with palpable abnormalities may require further investigation.
(09/17/2020)

Disposition and Responsibility

09/17/2019 - Ancillary Orders in FAMILY PRACTICE (continued)

Clinical Notes (continued)

A letter with these results will be sent to the patient by the Mammography Department.

08/06/19 121/69

Wt Readings from Last 1 Encounters:

12/13/19 113 lb 1.5 oz (51.3 kg)

R

Discussed with patient that there are new studies to support offering to extend Mirena for an additional 2 years beyond FDA labeling. Recent studies have demonstrated that Mirena offers effective contraception for an additional 2 years longer than the label indicates. The failure rate continues to be less than 1% up to 7 years.

The studies indicate that some patients may experience irregular bleeding with extended use of Mirena, but there is no decrease in efficacy.

She desires to keep her Mirena an additional 2 years. Explained that if she experiences irregular bleeding during her extended use and/or desires a replacement, please have her contact us at 888-988-2800 for a replacement.

Encouraged to call 2 months prior to expiration if desires to keep for full time.

Patient reports she is comfortable and agrees to plan. Denies further needs at this time. Patient verbalized understanding of all instructions and appreciative of call.

First Attempt:

I have attempted to contact this patient by phone with the following results: Left message will return call

Chief Complaint

Patient presents with

- ELECTROMYOGRAM AND NERVE CONDUCTION STUDY
patient with numbness to left lower buttock/back of thigh; constant x 10 months now. Unable to get MRI of LS since patient has a metal plate in face. Thank you

History:
43 y/o f with chronic numbness and pain in left buttocks and posterior proximal left lower extremity. Also has some chronic low back pain.

Vitals:

02/17/20 1558

Weight: 52.4 kg (115 lb 8.3 oz)
Height: 1.562 m (5' 1.5")
Alert and oriented, normal gait
Manual muscle testing 5/5 in bilateral lower extremities
Sensation dec left posterior thigh
Deep tendon reflexes symmetric, no clonus

02/17/2020 - Office Visit in PHYSICAL MEDICINE (continued)

Clinical Notes (continued)

left: positive straight leg raise
right: negative straight leg raise

Needle emg 2/17/20:

Patient was unable to tolerate the emg testing and requested the test be stopped.

	ICD-10-CM
1. LUMBAR RADICULOPATHY	M54.16
2. CHRONIC LOW BACK PAIN	G89.29
	M54.5

Note: 43 y/o f with chronic low back pain and left posterior thigh pain, numbness, likely left lower extremity radicular symptoms.

Plan:

Ibuprofen as needed. Risks, benefits, side effects of medication discussed. Patient declined other medications at this time.

Physical therapy referral. Discussed additional imaging. Patient declined lumbar xray. Patient states she cannot get lumbar MRI due to metal plate in face. Patient requests lumbar CT.

Advised on spine precautions, home exercise program, modalities, and neuro warning signs.

Return to clinic as needed. Patient advised to call back with any significant problems, worsening of symptoms or problems with medications PRN.

Tobacco Comment

non smoker

Allergies: Vicodin [acetaminophen-hydrocodone]

OBJECTIVE:

no apparent distress is noted over the phone

Prior Studies Reviewed

ASSESSMENT:

1. URI (UPPER RESPIRATORY INFECTION)

PLAN:

No orders of the defined types were placed in this encounter.

Upper Respiratory Infection: Advised that URI's are due to viruses and that symptoms will resolve in 1-3 weeks in most cases. Advised symptomatic treatment with tylenol, OTC NSAIDS, OTC decongestants. Advised to increase fluids and get more rest. Recheck if high fever, SOB, severe cough or sinus pains occur.

Low risk for covid 19

Recommend self isolation rtc for fever.

Time Spent: 5 minutes

Dear patient

Schedule your CT by calling Radiology Department at 714-223-3028 the next business day

It takes 1 week to have CT images be read and interpreted by Radiology Department.

You may call your Physical Medicine Doctor 7 days after your CT is done. You could either send an email through kp.org or call the Appointment center at 1-888-988-2800.

Our Department is closed on weekends and on major holidays. We are here from Monday through Friday between the hours of 8:30am to 5pm. Any message sent to us after 5pm will be handled the next business day.

Sincerely,

DAWN BURNS MA on behalf of Dr. Tin M.D. Physical Medicine Department

Comment:

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).
Test results are for the identification of SARS-CoV-2, RNA. It is detectable in nasopharyngeal and/or oropharyngeal samples during the acute phase of infection.

Negative results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as a sole basis for patient management. Negative results must be combined with other information such as patient history, clinical observations and epidemiology.

Presumptive Positive results are due to potential cross reactivity with SARS-CoV-1 or some other Sarbecovirus previously unknown to infect humans. Presumptive Positive specimens will be sent out for confirmatory testing.

For "Invalid" results a new specimen needs to be obtained for retesting.

04/04/2020 - Telephone Appointment Visit in FAMILY MEDICINE KP CARE NOW (continued)

Labs (continued)

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

Dear Michelle,

Your COVID-19 (coronavirus) sample did NOT show any signs of the COVID-19 virus. This is a good result.

However, it's important to understand that the test will sometimes not detect the virus even though someone is infected (sometimes when the test comes back negative a person is really positive).

It is advised that you continue home isolation until:

- 7 days have passed since you first developed symptoms.
- You have not had a fever and have not used fever reducing medication for 72 consecutive hours.
- Any cough or shortness of breath has improved for 72 hours.

During home isolation:

04/10/2020 - Patient Message in CALL CENTER TELE HEALTH (continued)**Messages (continued)**

- Isolate from others in your home by maintaining at least a 6 foot distance.
- Avoid sharing household items.
- Wash your hands with soap and water frequently.

After your home isolation period ends, continue social distancing as recommended by public health officials.

Please continue to monitor your symptoms. If you develop worsening a cough, shortness of breath, or ongoing fever, call 833-574-2273 to schedule a virtual appointment.

If you experience urgent symptoms such as severe shortness of breath, chest pain, confusion, lips are turning blue, or inability to eat or drink, you need to go to the Emergency Room or call 911 for emergency services.

Please be advised if you seek further medical care you should inform the patient screener that you have tested for COVID-19 and it was "Not Detected."

Sincerely,

DEANNA SETO LVN

Hello Michelle E Tiu

Women's Health Department is trying to reach you regarding your upcoming appointment on Wednesday, April 29th with Lisa Solomon, CNM.

Due to the ongoing concern about COVID-19, Kaiser Permanente is taking all necessary precaution for the safety of our patients and staff.

We are reminding all of our patients of our NO VISITOR POLICY. We ask that patients attend their visits alone. We appreciate your understanding during this time.

In addition, please do not be alarmed that we will be temperature screening and asking if you have had any symptoms: cough, fever, and/or shortness of breath at the front entrance of the building.

If yes to any of the following below, please contact us back at 949-932-5141 before coming to your appointment or seek emergency medical care if necessary.
If you have been exposed to a known COVID positive person
Having any symptoms including cough, fever, shortness of breath, diarrhea, and/or sore throat
Currently in the process of being screened for COVID-19

Thank you for your understanding,

Women's Health Department (OBGYN)

Creation Time: 4/28/2020 10:07 AM

04/28/20 10:07 AM

Patient is 43 year old G1P1002

Patient states for last year she has had constant numbness in her left leg

Wondering if it is related to her Mirena

Explained to patient that if it is related to Mirena that it is a very rare side effect, only way to know is to remove Mirena and see if numbness resolves but may not resolve

Saw her PCP who thinks maybe sciatica

Has tried motrin to see if maybe sciatica but motrin does not improve the numbness

States Mirena is over 5 years old

Has an appointment tomorrow for removal, wondering if provider can order US to see if there is pathology in pelvis to cause this

Explained that it will be up to individual provider, she will just need to ask

Patient unsure what she will do for contraception once it is removed, think OCP

Patient verbalizes understanding, no further questions

CLINICAL HISTORY: ReasonReason patient unable to get MRI due to facial surgery and metal plate. 43 y/o f with chronic low back pain and left posterior thigh pain, numbness, likely left lower extremity radicular symptoms.

COMPARISON: No previous study available for comparison.

TECHNIQUE: Study performed per protocol

CT Dose:

As required by California law, the CT DIvol and DLP radiation doses associated with this CT study are listed below. This represents the

05/11/2020 - Call Center Telephone Encounter in PHYSICAL MEDICINE (continued)

Imaging (continued)

estimated dose to a standard lucite phantom resulting from the technique used for this study, but is not the dose to this specific patient.

Type / CT DIvol / DLP / Phantom

Helical / 5.62 / 184.62 / B

Total Exam DLP: 184.62

CT DIvol = mGy DLP = mGy-cm

Phantom: B=Body32, H=Head16

FINDINGS:

Normal lordosis. No compression fracture or spondylolisthesis. No significant disc space narrowing.

T12-L1: Unremarkable.

L1-2: Unremarkable.

L2-3: Unremarkable.

L3-4: Diffuse 2 mm posterior disc bulge. Mild ligamentum flavum hypertrophy.

L4-5: Diffuse 3 mm posterior disc bulge. Mild ligamentum flavum hypertrophy.

L5-S1: Diffuse 3 mm posterior disc bulge.

No significant neuroforaminal stenosis. No significant spinal canal stenosis. Paraspinal soft tissue structures are intact.

IMPRESSION:

No acute findings. Diffuse mild posterior disc bulge at L3-4, L4-5, and L5-S1. No significant spinal canal stenosis. No significant neuroforaminal stenosis.

Dear Michelle,

Hope you are doing well.

I have ordered you a round of Doxycycline. We can also try topical Metrogel if symptoms are rosacea like. If not improving we can add Spironolactone (Aldactone) too. Let me know.

acne

From	To	Sent
Tiu, Michelle E	P Famocimo2 Call Ctr Pool (supporting Ani Ardashian (M.D.) Atoian, M.D.)	5/19/2020 12:26 PM

Hi Dr. Atoian,

I hope you are doing well and are safe. I decided to take out my Mirena and I noticed that I'm getting bad acne around my chin area again. They are getting large and I think they are hormonal per my history. I've been using salicylic acid with minimal help right now. I use to use epiduo and the clindamycin. I was also given a prescription of doxycycline and spironolactone. I wanted to see if you can help me out. I don't think the topicals helped as much as the orals per my history.

I do have some redness around my cheek area all the time and hygiene I have a mild case of rosacea. My face gets flush easy if I get upset or out of breath or even embarrassed.

I'm working back in clinic full time now so it's difficult for me to see you.

I would appreciate anything you can do to help.

Thanks,
Michelle Tiu

DOCTOR'S FIRST REPORT OF OCCUPATIONAL INJURY OR ILLNESS**--- This document is for State Form (DFR) ---**

Michelle E Tiu is a 43 year old right handed female who has worked as a(n) OPTOMETRIST for the past 16 years.

The patient's job responsibilities include desk work/sedentary work.

Origin of Injury:

Mechanism of injury: "right shoulder injury working in different non-ergonomic work locations, exam rooms and offices". States that her workstation at work is normally set up ergonomically but due to the COVID-19 pandemic she has been asked to work at different locations that are not ergonomic. She states she has been working at these locations and has been starting to have pain in her right shoulder. She states that the chair and monitor have not been set up ergonomically in a few locations. Indicates that her right shoulder

07/16/2020 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

does not bother her when she works at her usual office that is ergonomically set up.

Translation required: No

SUBJECTIVE COMPLAINTS:**Treatment History for This Injury:**

Michelle E Tiu states her symptoms started gradually.

The patient was initially seen for the injury by this provider.

Chief Complaint:

SHOULDER INJURY

Nursing notes reviewed by BADI DURAIN JEFFERS DO.

Current Complaints Today:

Upper Extremities: Right shoulder

Right Shoulder: Quality: dull and aching, Timing: intermittent; Duration: 1 week; Severity: mild pain and moderate pain; Right shoulder pain associated symptoms:: Denies numbness. Relieving Factors: rest.

REVIEW OF SYSTEMS:

The patient completed the Regional Review of Systems Questionnaire and I reviewed.

General: No fever, chills, or sweats

Eyes: No eye pain, blurry vision, double vision, or visual disturbances

Ears, Nose, Throat, and Mouth: No pain, hearing loss, or ear ringing

Cardiovascular: No chest pain or palpitations

Respiratory: No wheezing, cough, or shortness of breath

Gastrointestinal: No nausea, vomiting, or abdominal pain and No rectal bleeding or black stools

Genitourinary: No painful urination and No blood in urine

Skin: No rash, redness, or swelling

Neurologic: No headache and No numbness or tingling of extremities

Psychiatric: No anxiety or depression

Hematology: No easy bruising or bleeding

Allergy: No known environmental allergies

Extended Musculoskeletal:

I reviewed with the patient the following extended musculoskeletal systems.

Past Medical, Family, and Surgical History:

Reviewed Electronic Medical Records: Yes

Patient had a prior work related injury to the same body part(s). (She has a prior right shoulder work related claim for a similar problem that required physical therapy and ergonomic changes.)

Patient did not have a prior non-work related injury to the same body part(s).

Family History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

Past Surgical History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

07/16/2020 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)**SOCIAL HISTORY:**

Work Status before this visit: Full Duty

Claim Information: pending.

OBJECTIVE FINDINGS:Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

PHYSICAL EXAMINATION:

Constitutional: She is oriented to person, place, and time and well-developed, well-nourished, and in no distress.

HENT:

Head: Normocephalic and atraumatic.

Cardiovascular: Intact distal pulses.

Pulmonary/Chest: Effort normal. No respiratory distress.

Musculoskeletal:

Right shoulder: She exhibits decreased range of motion, tenderness and pain. She exhibits no swelling.

Left shoulder: She exhibits normal range of motion, no tenderness and no swelling.

Neurological: She is alert and oriented to person, place, and time. She has normal sensation and normal reflexes. Coordination normal.

Skin: Skin is warm and dry.

Psychiatric: Mood and affect normal.

Nursing note and vitals reviewed.

X-ray and laboratory ordered today:**DIAGNOSIS:**

M25.511 RIGHT SHOULDER JOINT PAIN

There is no evidence of chemical or toxic compounds being involved.

ARE YOUR FINDINGS AND DIAGNOSIS CONSISTENT WITH PATIENT'S ACCOUNT OF INJURY OR ONSET OF ILLNESS?

Yes

In the absence of any other injury, and based on the patient's clinical history, measurable objective findings, and medical records review, it is my medical opinion that the patient's condition, listed below in the diagnosis, is more likely than not, work related, while working with this employer.

07/16/2020 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)**IS THERE ANY OTHER CURRENT CONDITON THAT WILL IMPEDE OR DELAY PATIENT'S RECOVERY?**

No

TREATMENT RENDERED:

Michelle E Tiu has been advised to continue the following previous medication(s):

The medication(s)/supplies/radiological studies ordered this visit:

No orders of the defined types were placed in this encounter.

Treatment and Supplies:

1. Salon pas patches prn.
2. The patient is advised to apply ice or cold packs intermittently as needed to relieve pain.
3. The patient is advised to apply heat intermittently (avoid sleeping on heating pad).
4. Home exercise program.
5. Requires ergonomic workstation while working.

IF FURTHER TREATMENT REQUIRED, SPECIFY TREATMENT PLAN/ESTIMATED DURATION: More than likely the patient's condition is expected to improve or reach maximum medical improvement or full recovery in

IF HOSPITALIZED AS INPATIENT, GIVE HOSPITAL NAME, LOCATION, AND DATE ADMITTED:
no

WORK STATUS:

See Below

---End of FORM---

History Reviewed:

I have reviewed the Medical/Surgical, Family and Social history as displayed in HealthConnect on the date of the encounter or the portion(s) as noted in the progress note.

Chief Complaint:

SHOULDER PAIN

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: "right shoulder injury working in different non-ergonomic work locations, exam rooms and offices". States that her workstation at work is normally set up ergonomically but due to the COVID-19 pandemic she has been asked to work at different locations that are not ergonomic. She states she has been working at these locations and has been starting to have pain in her right shoulder. She states that the chair and monitor have not been set up ergonomically in a few locations, and some equipment was stiff and would not move easily. Indicates that her right shoulder does not bother her when she works at her usual office that is ergonomically set up.

Diagnostic Testing:

None

First visit treatment with Dr. Jeffers 7/16/2020:

'Treatment and Supplies:

1. Salon pas patches prn.
2. The patient is advised to apply ice or cold packs intermittently as needed to relieve pain.
3. The patient is advised to apply heat intermittently (avoid sleeping on heating pad).
4. Home exercise program.
5. Requires ergonomic workstation while working.'

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

07/30/2020 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The patient's symptoms from the previous visit are:
Gradually improving

Michelle E Tiu is a 43 year old female with the following subjective factors:

Patient Complaints:

Since first visit with Dr. Jeffers her supervisor did bring her back to her usual work station almost all the time, and her symptoms are improved. She is using turmeric, stretching, warm compresses , Salon Pas

Currently, the patient points to indicate:

right anterior and posterior shoulder pain that is aching with a feeling of weakness for quick/strenuous movement. Pain is rated at 3/10 (1=min & 10= max), variable

Aggravated by: any overhead use

Alleviated by: stretching

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva pain

Patient history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

Breastfeeding No

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Psychiatric: Pleasant, alert, no distress, mood and affect normal

07/30/2020 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)****PHYSICAL EXAMINATION:**

M75.21 TENDINITIS OF RIGHT BICEPS TENDON

M75.41 IMPINGEMENT SYNDROME OF RIGHT SHOULDER

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

No orders of the defined types were placed in this encounter.

Treatment Rendered:

ASSESSMENT:

Michelle E Tiu is a 43 year old female who presents with complaints of right shoulder pain that she relates to an incident at work.

History and physical examination was consistent with

The right biceps tendonitis, mild

PLAN:

May use over the counter ibuprofen or acetaminophen prn according to over-the-counter dosing instructions.

Continue turmeric

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue icing 10 min four times a day

Continue home exercise program for rotator cuff as taught in the past

07/30/2020 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist. Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

May return to work usual and customary tasks activity level; recommend access to routine ergonomic workstation. Injured worker is of small stature and this has contributed to her having problems in the past because of having to work with her arms at or above chest level frequently

Patient doing well, anticipate to release from care in the next 4 weeks at

Follow up in 4 weeks.

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

ADULT PRIMARY CARE OFFICE VISIT PROGRESS NOTE

PRIMARY CARE PHYSICIAN: Atoian, Ani Ardashian (M.D.)

SUBJECTIVE:

Michelle E Tiu is a 44 year old female

Chief Complaint

Patient presents with

- PHYSICAL EXAMINATION
- LAB ORDER REQUEST

Patient doing well overall. Some anxiety over Covid; has affected sleep. Wakes up early.

=====

No outpatient medications have been marked as taking for the 11/19/20 encounter (Office Visit) with Atoian, Ani Ardashian (M.D.), M.D..

OBJECTIVE:

BP 121/67 (BP Location: RA-RIGHT ARM, BP Patient Position: SITTING, Cuff Size: Standard Adult) | Pulse 68 | Temp 97.6 °F (36.4 °C) (Temporal) | Ht 1.549 m (5' 1") | Wt 52.5 kg (115 lb 11.9 oz) | Breastfeeding No | BMI 21.87 kg/m²

Ideal body weight: 47.8 kg (105 lb 6.1 oz)

Adjusted ideal body weight: 49.7 kg (109 lb 8.4 oz)

Physical Exam

Constitutional: She is well-developed, well-nourished, and in no distress. No distress.

Eyes: Pupils are equal, round, and reactive to light.

Neck: Normal range of motion.

Cardiovascular: Normal rate and regular rhythm.

Pulmonary/Chest: Effort normal and breath sounds normal.

Abdominal: Soft. Bowel sounds are normal.

Musculoskeletal: Normal range of motion.

Skin: She is not diaphoretic.

Nursing note and vitals reviewed.

ASSESSMENT:

PLAN:

Orders Placed This Encounter

- XR MAMMOGRAM SCREENING BILATERAL, SEQUENTIAL

Reason: Screening

Radiologist: Follow Sequential Breast Imaging Orders Policy and Procedures.

Order Specific Question:

Result Release to patient?

Answer:

Auto release after 4 days

- VACC INFLUENZA 4 YRS-ADULT (FLUCELVAX) QUADRIVALENT, PRES FREE, 0.5 ML IM

FLUCELVAX PF Quadrivalent 4+yrs. 0.5 mL intramuscular (IM)

Order Specific Question:

Result Release to patient?

Answer:

Immediate

CREATININE	0.78	<=1.10 mg/dL	—	SCPMG
GLOMERULAR FILTRATION RATE	92	>=60 mL/min/BSA	—	SCPMG

Comment:
GFR estimate is invalid if on dialysis or if acute kidney injury. For newly identified GFR decline, evaluate for reversible causes and order Kidney Profile (includes GFR and ACR). Go to Aura 5-year Renal Failure for CKD risk assessment and guidance.

CKD Categorization by GFR & ACR (urine Albumin/Creatinine Ratio = microalbumin/creatinine)

GFR >3 months	ACR <30(A1)	ACR 30-<300(A2)	ACR 300+(A3)
=====	=====	=====	=====
>=90		CKD1 A2 or *	CKD1 A3
60-<90		CKD2 A2 or *	CKD2 A3
30-<59	CKD3 A1 or *	CKD3 A2	CKD3 A3
15-<30	CKD4 A1	CKD4 A2	CKD4 A3
<15	CKD5 A1	CKD5 A2	CKD5 A3

*may label 'abnormal kidney function' or 'proteinuria' as appropriate

HGBA1C%	5.4	4.6 - 5.6 %	—	SCPMG

Labs (continued)

Comment:
A repeatable HbA1c > or = 6.5% is diagnostic of diabetes. A single HbA1c > or = 6.5% can also be confirmed by a fasting plasma glucose measurement > 125 mg/dL, a random plasma glucose > or = 200 mg/dL, or a 2 hour oral glucose tolerance test result > or = 200 mg/dL. Patients with HbA1c of 5.7-6.4% are at increased risk for future diabetes.

VITAMIN D, 25-HYDROXY [1213173028] (Abnormal)

Resulted: 11/22/20 1627, Result status: Final result

Order status: Completed
Collected by: Q945535 11/19/20 0947
Narrative:
RMS ACCN: 688961420
Acknowledged by: Atoian, Ani Ardashian (M.D.), M.D. on 11/23/20 1035

Filed on: 12/27/20 1149
Resulting lab: SHERMAN WAY REGIONAL LABORATORY

Components

Component	Value	Reference Range	Flag	Lab
VITAMIN D, 25-HYDROXY, D3	22	ng/mL	—	956
VITAMIN D, 25-HYDROXY, D2	<4	ng/mL	—	956
25-HYDROXYVITAMIN D	22	30 - 100 ng/mL	L ▼	956

Comment:

There is general consensus (Endocrine Society, Natl Osteoporosis FDN, K_DOQI) that 25-OH Vitamin D measurements > 30 ng/mL are desirable. However, most Americans are deficient by this standard (NHanes III).

Levels <10 ng/mL are consistent with a diagnosis of Rickets/Osteomalacia.

Infants normally produce Vitamin D metabolites that falsely elevate 25-OH Vitamin D measurements. Please order D,25-Hydroxy, Neonatal [82306D] for these patients.

This test was developed and its performance characteristics determined by each applicable laboratory in the Southern California Permanente Medical Group Laboratory System where the test is performed. It has not been cleared or approved by the FDA. Each applicable laboratory is regulated under CLIA as qualified to perform high-complexity testing. This test is used for clinical purposes. It should not be regarded as investigational or for research.

INFORMATION LETTER by Atoian, Ani Ardashian (M.D.), M.D. on 12/21/2020

Status: Sent	Comments: overdue mammogram
Letter body:	

12/21/2020

Re: Michelle E Tiu
126 Statura
Irvine CA 92602-1912

Dear Michelle E Tiu,

We would like to remind you to have a mammogram done. If you have already done this, thank you for taking care of your health. If you haven't, please get this important test done. In Orange County, almost 1 in 7 women will experience breast cancer in their lifetime. Mammograms can detect breast cancer early. Early detection and intervention helps women avoid the devastating and heartbreaking effects of breast cancer.

Although you can walk in for a mammogram, an appointment is preferred. To schedule an appointment, call the radiology appointment center at 714-223-3028. We have enclosed a list of locations that have mammogram machines, along with their hours of operation.

Please take the time to take care of yourself. Do it for yourself, and those that you love.

Sincerely,

YVETTE GARCIA LVN on behalf of Atoian, Ani Ardashian (M.D.)

SARS-COV-2 (COVID-19), QUALITATIVE, NAA	Invalid	Not Detected	A †	SCPMG

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as PCR or TMA). The test has been validated and the Food and Drug Administration's independent review of this validation is pending.

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SAR- CoV-2 RNA present.

Negative / Not Detected results for SAR- CoV-2 RNA do not rule out COVID-19 infection and should not be used as the sole basis for patient management. Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated

Inconclusive. Not all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for the detection of SAR- CoV-2 RNA and/or diagnosis of COVID-19 infection.

Visit Information

Self Triage Covid-19 Group Dt Scal

Last updated: 12/2/2020 5:51 PM PDT

Which of the following Coronavirus concerns is your reason for visit?

COVID-19 No Symptoms, Need Testing

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Do you have new difficulty breathing and worse shortness of breath when walking fast or up the stairs?

No

Do you currently have any of the following symptoms?

Fever

No

New cough or worsening of a chronic cough

No

New loss of taste or smell (Anosmia)

No

Nausea or Vomiting

No

Headache that is different from past typical headache

No

Repeated shaking chills

No

Diarrhea (frequent loose or watery stool)

No

Sore throat

No

Muscle aches/pain over entire body

No

Nasal congestion or runny nose

No

Would you like to take the diagnostic test which checks for current COVID-19 infection? This requires you to go into a Kaiser Permanente or another licensed collection facility to provide a specimen.

Yes, I would like to take this test

Why do you need to be tested?

I was exposed to someone who has COVID-19

Do you agree to this advice?

I have reviewed and understand this advice and would like to take the test

I have reviewed and understand the instructions above.

There are two methods of collecting specimen for COVID testing. For SALIVA, you will be asked to provide approximately half of a teaspoon of saliva into a container. For SWAB, a swab will be applied into the mouth and then the nose. Which method do you prefer?

Which of the following COVID-19 concerns is your reason for visit?

Antibody (Serology) Testing - Not for current infection

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Would you like to proceed with this E- visit?

Yes

Do you have any of the following symptoms?

12/13/2020 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

No

Have you had any of the following symptoms in the past 14 days?

No

The COVID-19 Antibody (Serology) test is a new test for COVID-19 designed to check for presence of antibodies to COVID-19. Antibodies appear at least 1-2 weeks after COVID-19 infection and the antibody test is not used to detect active infection. This test can be valuable for tracking possible COVID-19 infection rates in our community.

Would you like to take this Antibody (serology test)? This requires you to go into a Kaiser Permanente lab for a blood draw.

Yes, I would like to take this test

Do you agree to this advice?

I have reviewed and understand this advice

Please indicate the reasons for requesting an antibody test:

I have been ill with symptoms suggestive of COVID in 2020

—

My employer requested I have this test

—

I have been in contact with a person known to be infected with COVID-19

—

My doctor or other care provider suggested I get this test

—

I have had a positive diagnostic test for COVID in 2020 (by swab, sputum, or saliva)

—

I would like to stop wearing a mask and/or practice social distancing

—

Other (specify)

Yes

Please indicate your reason for the antibody test.

I'm planning to get the vaccination and want to make sure I'm negative before taking the vaccine.

In the past 12 months, have you had any of the following COVID-19 symptoms?

Fever greater than 100

—

New Cough or worsening chronic cough

—

Since your symptoms began, new difficulty breathing and worse shortness of breath

—

Malaise/Fatigue

Yes

Severe muscle aches

—

Nausea or Vomiting

—

Headache that is different from past typical headache

Yes

Diarrhea

—

Sore Throat

—

Loss of sense of smell or taste

—

Chills

—

Repeated shaking chills

—

When did the malaise/fatigue start?

8-12 weeks ago

How long did the malaise/fatigue last?

More than 7 days

When did the headache start?

8-12 weeks ago

12/13/2020 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

How long did the headache last?

1-2 days

Were you in close contact with someone with known COVID-19 infection?

Yes

When did you encounter this person?

More than 3 weeks ago

Have you traveled internationally in the last 6 months?

No

Please let us know about your COVID-19 potential exposure due to work and living situation(s).

First Responder (Firefighter, Paramedic, Police Officer, etc.)

—

Health Care Worker (Doctors, Nurses, Pharmacists, Lab technician, Hospital/Clinic Receptionist, etc.)

Yes

Other Essential Worker (Work in areas of food, safety, communications, government, essential trade, critical manufacturing, etc.)

—

Not an essential worker but continued to work during the pandemic due to financial reasons

—

Needed to use public transportation to travel to work

—

Live in a household with someone who is an essential worker

—

Live in a household with someone who is not an essential worker but worked during the pandemic

—

Difficult to isolate from others in the household as we do not have access to separate bedroom or bathroom

—

Attended work in person regularly due to persistent issues with internet access or access to computer/laptop

Staff verified patient using two identifiers and confirmed the COVID-19 saliva test order. The staff provided the patient with handouts on the saliva specimen collection instructions, instructions on accessing test results, and what to do if they experience symptoms. Specimen label verified with the patient using two identifiers and the saliva specimen collected by the patient per instructions given.

Specimen received by Mejia, Xiomara A. MA.

Patient Instructions

COVID-19 After Testing Instructions

You have been tested for the Novel Coronavirus (COVID-19).

- **Kaiser Permanente will contact you with your results. Please do not return to a Kaiser Permanente facility for your results.** Results will be available on kp.org. If you do not have an account, please sign up today at www.kp.org and click on "Register".
- If your symptoms worsen, please contact Kaiser Permanente at 1-833-KP4CARE (1-833-574-2273)(TTY 711) to talk to a licensed care provider 24/7.
- Stay home from work, school, and away from other public places. If you must go out, always maintain social distancing and wear a mask.
- Wash your hands often with soap and water for at least 20 seconds and/or clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.
- Avoid touching your face. Sneeze or cough into a tissue or the inside of your elbow.
- As much as possible, stay in a specific room and away from other people in your home. Use a separate bathroom, if available. Avoid sharing personal items with other people in your household, like dishes, towels, and bedding.
- Disinfect frequently used items and surfaces as much as possible.

12/23/2020 - Allied Health/Nurse Visit in FAMILY PRACTICE (continued)**Patient Instructions (continued)**

- Get rest and stay hydrated.
- For medical emergencies, call 911 and notify the dispatch personnel that you have or may have COVID-19.
- For online up to date information, please see the links below for Centers for Disease Control and Prevention (CDC):

<https://www.cdc.gov/coronavirus/2019-ncov/index.html>

END OF ENCOUNTER**12/24/2020 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT****Visit Information****Self Triage Covid-19 Group Dt Scal**

Last updated: 12/24/2020 12:34 PM PDT

Which of the following COVID-19 concerns is your reason for visit?

No Symptoms, Need Testing

Would you like to consider testing outside a Kaiser Permanente facility?

No

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Do you have new difficulty breathing and worse shortness of breath when walking fast or up the stairs?

No

Do you currently have any of the following symptoms?

Fever

No

New cough or worsening of a long-standing cough

Yes

New loss of taste or smell (Anosmia)

No

Nausea or Vomiting

No

Headache that is different from past typical headache

No

Repeated shaking chills

No

Diarrhea (frequent loose or watery stool)

No

Sore throat

No

Muscle aches/pain over entire body

No

Nasal congestion or runny nose

No

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Components

Component	Value	Reference Range	Flag	Lab
SARS-COV-2 (COVID-19), QUALITATIVE, NAA	Not Detected	Not Detected	—	SCPMG

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as PCR or TMA). The test has been validated and the Food and Drug Administration's independent review of this validation is pending.

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SAR- CoV-2 RNA present.

Negative / Not Detected results for SAR- CoV-2 RNA do not rule out COVID-19 infection and should not be used as the sole basis for patient management.

Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated

12/24/2020 - Telephone in FAMILY PRACTICE (continued)

Labs (continued)

Inconclusive. Not all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for the detection of SAR- CoV-2 RNA and/or diagnosis of COVID-19 infection.

--	-----------------------	--

Dear Ms. Tiu,

Your COVID-19 (coronavirus) sample did NOT show any signs of the COVID-19 virus. This is a good result. However, it's important to understand that this does not 100% rule out COVID-19, but makes it much less likely.

If you were tested because of symptoms that were concerning for possible COVID-19 then I advise that you continue to home isolate until you are fever free (off of fever reducing medications) for at least 24 hours and any respiratory symptoms like a cough or shortness of breath are improved. After your home isolation period ends, please continue social distancing and masking as recommended by public health officials.

Also, if you had an exposure to COVID-19 and were infected it, can take up to 14 days after exposure for the test to turn positive so you should continue to isolate till 14 days after exposure even with a negative test result (this may not apply to essential workers).

Please continue to monitor your symptoms. If you develop worsening cough, shortness of breath, or ongoing fever, call 833-574-2273 to schedule a virtual appointment.

If you experience urgent symptoms such as severe shortness of breath or chest pain, confusion, lips are turning blue, or inability to eat or drink, you need to go to the emergency room or call 911 for emergency services.

Please be advised if you seek further medical care you should inform the patient screener that you have tested for COVID-19 and it was "Not Detected".

Sincerely,

SUNG S. CHANG DO

Hi Dr. Atoian,

Thanks. I plan to get the second dose. I may just stay for an hour to see if I get dizzy or not. I've been still feeling dizzy at times so hopefully it will get better.

Happy New Year , take care and be safe!

Regards,
Michelle Tiu

Hi Michelle,

Happy New Year to you and your family! I am so glad you got the vaccine. Obviously we are learning as we are moving forward with the vaccine but personally if I was experiencing the side effect of dizziness I would complete the vaccine. It is worth the immunity.

12/31/2020 - Patient Message in FAMILY PRACTICE (continued)

Immunization update/question

From	To	Sent
Tiu, Michelle E	Ani Ardashian (M.D.) Atoian, M.D.	12/31/2020 3:45 PM

Hi Dr. Atoian,

I want to first wish you a happy New Year!! I got my first dose of the Covid vaccine and got dizzy and light headed 45 minutes after. 48 hours later I got a headache and then dizziness for several days after. I read on the pamphlet that was given to us that dizziness is a severe side effect. Will it be safe to get my second dose and do you know why dizziness is a severe side effect?

I'm scheduling my next vaccine on January 15. Your response would be helpful.

Thanks,
Michelle Tiu

method for SARS-CoV-2 viral RNA detection (also known as PCR or TMA).

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SARS-CoV-2 RNA present.

Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management.

Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated.

Inconclusive. Not all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

Visit Information

Self Triage Covid-19 Group Dt Scal

Last updated: 7/14/2021 12:27 PM PDT

Which of the following COVID-19 concerns is your reason for visit?

No Symptoms, Need Testing

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Do you have new difficulty breathing and worse shortness of breath when walking fast or up the stairs?

No

Do you currently have any of the following symptoms?

Fever

No

New cough or worsening of a long-standing cough

No

New loss of taste or smell (Anosmia)

No

Nausea or Vomiting

No

Headache that is different from past typical headache

No

Repeated shaking chills

No

Diarrhea (frequent loose or watery stool)

No

Sore throat

No

Muscle aches/pain over entire body

No

Nasal congestion or runny nose

No

Would you like to take the diagnostic test which checks for current COVID-19 infection?

Yes, I would like to take this test

Why do you need to be tested?

I am a healthcare worker

Are you a Kaiser Permanente physician, clinical staff, or non-clinical employee?

Yes

Where do you work? If you work at the more than one location, select your preferred location for testing.

Orange County

Do you agree to this advice?

I have reviewed and understand this advice and would like to take the test

Which method would you prefer?

Saliva – Go to KP Facility

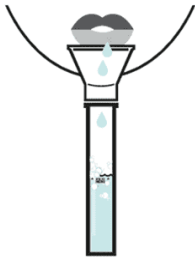

Patient Instructions

SARS-COV-2 (COVID-19), QUALITATIVE, NAA	Not Detected	Not Detected	—	SCPMG

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as RT-PCR or TMA).

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).

07/25/2021 - Orders Only in SCAL OC E-VISITS ADMIN DEPT (continued)

Labs (continued)

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SARS-CoV-2 RNA present.
Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management. Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated.

Inconclusive
. Not all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

Self Triage Covid-19 Group Dt Scal

Last updated: 7/25/2021 9:33 PM PDT

Which of the following COVID-19 concerns is your reason for visit?

COVID-19, Cold, Cough, Sore Throat: Testing and Off Work/School Note

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Are you currently receiving Chemotherapy (any type) for cancer or in between cycles of chemotherapy AND have a fever greater than 100.4?

No

Which of the following best describes your current condition?

I don't know if I am pregnant

Are you breastfeeding?

No

Do you currently have any of the following symptoms?

Fever

No

New cough or worsening of a long-standing cough

No

New loss of taste or smell (Anosmia)

No

Nausea or Vomiting

No

Headache that is different from past typical headache

Yes

Repeated shaking chills

No

Diarrhea (frequent loose or watery stool)

No

Sore throat

Yes

Muscle aches/pain over entire body

No

Nasal congestion or runny nose

No

The following symptoms indicate potential serious or concerning condition that WILL require an assessment by a clinician. Do you have any of the following with your headache?

NEW weakness on one side of the body or face

No

NEW vision changes such as not able to see through one eye.

No

Confused thinking or speech

No

Light causes unbearable pain

No

A rigid or stiff neck causing pain when trying to touch your chin to your chest

No

Falling to one side when walking since symptoms begin and lasting more than a few minutes and not due to injury

No

Very sudden onset, severe headache with vomiting.

No

Is your sore throat:

Mild

The following symptoms indicate potential serious or concerning condition that WILL require an assessment by a clinician. Do you have any of the following?

Drooling that is getting worse

No

07/25/2021 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

Swelling of face, neck, lips, tongue or throat that is rapidly getting worse

No

The following symptoms indicate potential serious or concerning condition that WILL require an assessment by a clinician. Do you have any of the following?

Abdominal pain

No

New rash with small red/purple spots or patches

No

Severe weakness that makes walking or standing difficult

No

Fever of 103 or greater

No

When did you start having these symptoms?

7/24/2021

Check all of the following conditions that apply to you:

Spleen removed

No

Aplastic anemia or sickle cell disease

No

HIV

No

AIDS

No

Cancer for which I am currently being treated

No

Medication(s) which can weaken the immune system

No

On cortisone steroid medication for 2 weeks or longer

No

Asthma, COPD, Cystic Fibrosis or other lung disease

No

Kidney disease, on kidney dialysis, or planning to be on dialysis

No

Neuromuscular disease such as cerebral palsy, multiple sclerosis, quadriplegia, or paraplegia

No

Heart failure

No

Liver failure or ongoing liver disease

No

Organ transplant

No

Recent mononucleosis (Mono)

No

Chemotherapy within the last 4 weeks

No

Resident of a nursing home, assisted living or other nursing facility

No

Check all of the following that apply to you:

65 years or older

—

Have dementia

—

Diabetes (Type 1 or 2)

—

Native Alaskan heritage

—

Native American heritage

—

Extremely obese (100 lbs or more overweight)

07/25/2021 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

None of the above

Yes

Have you had A POSITIVE COVID-19 test in the past 3 months?

No

Do you need a time off note?

No

I have reviewed and understand the instructions above. Please select from one of the following options:

My symptoms are manageable. I would like to take the test for COVID-19 infection.

Selftriage Order Reuse C19_Pcr_Testloc_Button Adult_Peds Regn Peq_Scal

VERY IMPORTANT: READ THE FIRST 3 BULLET POINTS below:

- A COVID-19 **PCR SWAB-based test has been ordered** for you **on 9/24/2024**. **No need** to contact your healthcare team.
- Click on the button to access a list of locations along with the hours of operations. Take a screenshot or photo of this list for your reference.

[Testing Locations](#)

- Results are available within **3-4 days** of specimen collection. Plan your testing accordingly to ensure timely processing and return of test results. If you do not receive a notification **after 5 days** from the test date, please call the Appointment Center at [1-833-574-2273](tel:1-833-574-2273) (TTY 711) or notify your provider.

You will receive an automatic notification with a link to a letter providing guidance on self-isolation. The letter can be found for:

- Age 18 or older - under **Medical Records > Letters** section.
- Age under 18 - under **Message Center > Inbox** section.

You can always click on the E-visit History located at the bottom of the E-visit menu for a copy of these instructions.

Note: To manage your health and find many useful resources including your customized Personal Action Plan, visit kp.org/actionplan to see what you can take control of today!

Thank you for completing this E-visit. Hope you stay safe.

Selftriage Selfcare Cold_Flu Na Adult Regn_Ga Peq_Scal

Your Care Plan  **KAISER PERMANENTE®**

07/25/2021 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

Common Cold, COVID-19, and Flu are contagious respiratory illnesses caused by different viruses.

Colds: infection with rhinovirus and many other viruses

- Symptoms include sore throat, runny nose, coughing, sneezing, headaches, and body aches.

COVID-19: infection with coronavirus (SARS-CoV-2)

- COVID-19 can cause more severe illness in some people than the flu and it may take longer for them to develop symptoms or to get better. Patients with COVID-19 may also be contagious for a longer time than those with the flu.

Flu: infection with seasonal flu virus

- Seasonal influenza is a respiratory illness that can affect the nose, throat, and lungs. Flu viruses spread when infected people cough, sneeze or talk. The illness can vary from mild to severe.

Home Care for viruses

Note: As with any over the counter (OTC) medication, carefully read the label to make sure this medication is right for you and follow all of the instructions.

- Get plenty of rest
- Drink more fluids such as water, Pedialyte or Gatorade
- If you have fluid restrictions for health reasons, discuss this with your healthcare team
- **Fever, muscle aches, headache:** Take over the counter (OTC) pain medicine such as acetaminophen (Tylenol), ibuprofen (Advil, Motrin), or naproxen (Aleve) as directed. Do not use ibuprofen or naproxen if you have a history of stomach ulcers or kidney disease.
- **Cough:** OTC cough syrup such as Robitussin or cough drops (sugar free for diabetics), try an extra pillow at night to elevate your head for cough due to postnasal drip, use a humidifier in bedroom
- **Nasal/Sinus congestion:** Use nasal saline rinses and anti-inflammatory nose sprays: fluticasone (Flonase), triamcinolone (Nasacort), or try oral decongestants such phenylephrine (Sudafed) or Pseudoephedrine (ask pharmacist to purchase it behind the pharmacy counter). Do not use decongestants if you have high blood pressure
- **Sore throat:** Keep throat moist, drink warm tea or soup, suck on herbal lozenges or use OTC throat sprays, eat soft foods, or try salt gargles by mixing one cup warm water and 1-2 tsp of salt
Note: If you have sore throat with fever that is not getting better with self-care, there is a small possibility that your symptoms may be from strep infection. You should discuss your symptoms with your health care team.
- **Sore nose/dry lips:** Apply petroleum jelly (Vaseline or Aquaphor)
- **Pregnant/ Nursing:** You may use Delsym 12 hour, Robitussin DM, Mucinex DM, Tylenol, Nasal Saline spray and Flonase to help with your symptoms. Do not use ibuprofen (Advil, Motrin), naproxen (Aleve), Sudafed (phenylephrine or Pseudoephedrine), or Afrin. If you need further guidance, consult your pharmacist or healthcare team.
- Continue taking your prescribed medicine exactly as directed
- Do not smoke since it will worsen flu symptoms

When to seek emergency medical help

- Trouble breathing
- Pale, blue lips or nail beds
- Persistent pain or pressure in chest

07/25/2021 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

- Temp 103.0 F or more
- Inability to stay awake
- New confusion or disorientation
- Feeling faint, lightheaded, or weak

Available Prescription Treatments

Note: Most **healthy people** with the Common Cold, COVID-19 and Flu will get better with home care and rest and may not benefit from antiviral medications.

- **Common Cold:** There is no cure or antiviral medication available for colds, and many patients will feel better with home care, fluids, rest, and over the counter medication.
- **COVID-19:** Antiviral medications such as Paxlovid are recommended for some **high-risk patients** and should be started as soon as possible up to 5 days after symptoms start.
- **Flu:** Antiviral medications such as Tamiflu are recommended for **high-risk patients** and should be started as soon as possible up to 5 days after symptoms start.

Controlling Spread of Infection

- Wash hands or use alcohol-based hand sanitizers
- Cover your cough and sneezes
- Avoid crowded places
- Move indoor activity outdoors, improve ventilation in the home by opening windows and circulating air with fans, replace air filters to ensure they are properly fitted. Update new filters with a higher filtration if able.
- Keep vaccinations up to date

When to end isolation for COVID-19:

Covid 19 CDPH recommendation link: <https://covid19.ca.gov/quarantine-and-isolation/#calculate-your-isolation>

Common Cold and Flu: If you test negative for Covid-19, you may end your isolation after your symptoms have improved and it has been 24 hours since your fever has resolved without the use of fever reducing medications.

Other Health Care Recommendation for you

To manage your health and find many useful resources including your customized Personal Action Plan. Please visit kp.org/actionplan to see what you can take control of today!

Dear Michelle E Tiu,

After review of your E-visit responses and your electronic medical record, I have prepared an off work/school note as you have requested.

Below are instructions on how to print your off work/school note from your Kp.org account. Please read all contents of this message.

To access your OFF WORK/SCHOOL note follow these instructions:

1. Go to kp.org on your computer or mobile device.
2. Enter your user id and password under member sign on section and click the sign on button.
3. Click Medical Record menu item.
4. Click on "letters" and find the document from today's date
5. The document will open
6. You can print your form.

A COVID-19 test has been ordered for you.

07/25/2021 - E-Visit in Initial Department (continued)

Please visit the following link to locate the testing location nearest you:

COVID Testing Locations with Testing Site Locations

MARYAM SHAHROKHI MD
KP Virtual Medical Center

Stay healthy! Click the link below to view your personalized prevention and wellness plan.
<https://www.kp.org/action-plan>

At Kaiser Permanente, the health and safety of our members is always our top priority. As your partner in health, we are here to help you.

When to Call Kaiser Permanente or Seek Medical Attention

While you are recovering at home, continue to monitor your illness. If your illness worsens, seek immediate medical care by calling 1-833-574-2273 (1-833-KP4CARE). Tell them that you have COVID-19. If you are told to come to the medical center, please wear your mask.

What are the symptoms of COVID-19?

Patients with COVID-19 have had mild to severe respiratory illness with symptoms of
Fever
Cough
Shortness of breath

What are severe complications from this virus?

Some patients have pneumonia in both lungs, multi-organ failure and in some cases death.

How can I help protect myself?

People can help protect themselves from respiratory illness with everyday preventive actions.

Avoid close contact with people who are sick.
Avoid touching your eyes, nose, and mouth with unwashed hands.

Wash your hands often with soap and water for at least 20 seconds. Use an alcohol-based hand sanitizer that contains at least 60% alcohol if soap and water are not available.

If you are sick, to keep from spreading respiratory illness to others, you should

07/25/2021 - E-Visit in Initial Department (continued)**Messages (continued)**

Stay home when you are sick.

Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
Clean and disinfect frequently touched objects and surfaces.

Home Isolation Instructions for Novel Coronavirus-2019 (COVID-19)
Information for COVID-19 patients who are not hospitalized:

Stay home. Do not leave your home, except to get medical care, until your healthcare provider says it is OK. Do not go to work, school, or public areas, and do not use public transportation or taxis.

Separate yourself from other people and animals in your home. As much as possible, stay in a different room from other people in your home. If possible, use a separate bathroom. If you must be in the same room as other people, wear a facemask to prevent spreading germs to others.

Before you visit your doctors, let them know. Call ahead before visiting your doctor so they can prepare for your visit and know that you may have COVID-19.

Cover coughs and sneezes. To prevent spreading germs to others, when coughing or sneezing cover your mouth and nose with a tissue or your sleeve. Throw used tissues in a lined trash can, and immediately wash hands with soap and water.

Keep hands clean. Wash hands often and thoroughly, especially after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food. Use soap and water for at least 20 seconds. Use hand sanitizer with at least 60% alcohol if soap and water are not available and if hands are not visibly dirty. Avoid touching eyes, nose, and mouth with unwashed hands.

Avoid sharing household items. Do not share dishes, drinking glasses, cups, eating utensils, towels, bedding, or other items with other people or pets in the home. These items should be washed thoroughly after use with soap and warm water.

Monitor illness. If your illness gets worse seek medical care. If possible, call your healthcare provider and tell them that you have, or might have, COVID-19. This will help your provider to take steps to keep other people from getting infected. Put on a facemask before you enter the facility. If you have life-threatening symptoms (for example, trouble breathing, pain in chest), call 911. If possible, put on a facemask before emergency medical services arrive.

These recommendations should be followed until your tests show that you do not have COVID-19, or you are told by Public Health or your health care provider that they are no longer infectious.

07/25/2021 - E-Visit in Initial Department (continued)

Messages (continued)

COVID-19: Recovering at Home

At Kaiser Permanente, the health and safety of our members is always our top priority. As your partner in health, we are here to help you.

If you are currently being evaluated for or have been confirmed to have COVID-19, stay home and separate yourself from other people in your home. As much as possible, stay in a separate, well-ventilated room, use a separate bathroom, and wear a mask to prevent the spread of the virus.

Follow these recommendations until your provider has confirmed you are no longer contagious or you meet all three conditions that indicate that you may consider stopping isolation (see the next page).

Get plenty of rest, drink plenty of fluids, eat healthy foods, and continue monitoring your illness.

Keep your hands clean. Wash your hands often with soap and warm water for at least 20 seconds or use an alcohol-based hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands and rub them until they are dry.

Use a tissue or your sleeve to cover your nose when you cough or sneeze. Wash your hands after you cough or sneeze and dispose of the tissue properly.

When possible, open windows to shared spaces for good airflow. Turn off central air conditioning/heat. Limit your movement throughout the home and remain in your room to minimize interaction with others.

If you need to visit your doctor, call ahead to let them know that you have COVID-19 and follow instructions on how to check in for your visit.

Don't go to work, school, and other public places like grocery stores. If you must go out, avoid using public transportation and ridesharing, and follow local public orders about wearing masks.

Avoid touching your eyes, nose, and mouth.

Do not share dishes, cups, utensils, towels, bedding, clothes, toothbrushes, and other personal items. Wash these items thoroughly with soap and warm water after use.

Do not prepare, serve, or share food with others while you are sick. Ask other household members to prepare food and dish out your portion separately. Designate a set of dishes, cups, and utensils just for your use.

Do not provide direct care for children, pets, older adults, or anyone at high risk for COVID-19. If you must provide care for others, wear a mask, wash your hands before touching them, and keep your distance as much as possible.

If you develop any life-threatening symptoms, such as trouble breathing, consistent pain in the chest, or bluish lips/face, call 911 and tell them that you have COVID-19. If possible, put on your mask before help arrives.

When It's Safe to Stop Home Isolation

07/25/2021 - E-Visit in Initial Department (continued)

Messages (continued)

Stay isolated until you have fully recovered from all symptoms. Meeting all three conditions may indicate that you are no longer contagious:

You have had no fever (100°F or higher) for at least 72 hours in a row without taking any medication to reduce it. AND

Your symptoms have improved (improved cough, no shortness of breath). AND It's been at least 10 days since your first symptoms.

Like any illness, it's best to stay isolated until all your symptoms have improved and you feel well. If you have any questions, talk to your provider to confirm whether it's safe to stop home isolation.

What is coronavirus disease 2019 (COVID-19)?

Coronavirus disease 2019 (COVID-19) is a respiratory illness that can spread from person to person. COVID-19 is spreading from person to person in the United States. Risk of infection with COVID-19 is higher for people who are close contacts of someone known to have COVID-19, for example healthcare workers, or household members. Other people at higher risk for infection are those who live in or have recently been in an area with ongoing spread of COVID-19. Learn more about places with ongoing spread at:

<https://www.cdc.gov/coronavirus/2019-ncov/about/transmission.html#geographic>

Have there been cases of COVID-19 in the U.S.?

Yes. The first case of COVID-19 in the United States was reported on January 21, 2020. The current count of cases of COVID-19 in the United States is available on CDC's webpage at:

<https://www.cdc.gov/coronavirus/2019-ncov/cases-in-us.html>

How does COVID-19 spread?

The virus that causes COVID-19 probably emerged from an animal source, but is now spreading from person to person. The virus is thought to spread mainly between people who are in close contact with one another (within about 6 feet) through respiratory droplets produced when an infected person coughs or sneezes. It also may be possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes, but this is not thought to be the main way the virus spreads. Learn what is known about the spread of newly emerged coronaviruses at:

<https://www.cdc.gov/coronavirus/2019-ncov/about/transmission.html>.

What should I do if I recently traveled from an area with ongoing spread of COVID-19?

If you have traveled from an affected area, there may be restrictions on your movements for up to 2 weeks. If you develop symptoms during that period (fever, cough, trouble breathing), seek medical advice. Call the office of your health care provider before you go, and tell them about your travel and your symptoms. They will give you instructions on how to get care without

07/25/2021 - E-Visit in Initial Department (continued)

Messages (continued)

exposing other people to your illness. While sick, avoid contact with people, don't go out and delay any travel to reduce the possibility of spreading illness to others.

The best way to prevent infection is to take everyday preventive actions, like avoiding close contact with people who are sick and washing your hands often.

COVID-19: Information for Caregivers and Household Members

Most people who get sick with COVID-19 will have mild symptoms and can recover at home. If you are a household member, partner, or caregiver to someone who has symptoms or is confirmed to have COVID-19, you should monitor your own health. If you develop COVID-19 symptoms, contact Kaiser Permanente at 1-833-574-2273 (1-833-KP4CARE).

These symptoms may appear 2 to 14 days after being exposed to COVID-19:

Fever (100°F or higher)

Cough

Shortness of breath

Other possible symptoms:

Diarrhea

Loss of smell and taste

This is an especially difficult time. We want to keep you and your loved ones healthy and safe, and that's why it's important to follow these recommendations. While living with or caring for someone who is sick:

Monitor your health for 10 days after close contact with the person who is sick. Start with the day you first had close contact and watch for fever, cough, or trouble breathing.

Caregivers should be in good health, without chronic illnesses or a compromised immune system. Limit the number of people taking care of the person who is sick.

Wear a mask when in the same room as the person who is sick. If the mask gets dirty or is exposed to bodily fluids, replace it immediately.

Wash your hands often with soap and warm water for at least 20 seconds. Using alcohol-based hand sanitizers with at least 60% alcohol is also effective. Wash your hands immediately after any contact with the person who is sick.

Clean and disinfect frequently touched surfaces daily: doorknobs, sinks, counters, and tabletops. Clean first with household cleaners, and then disinfect. To disinfect, you can use bleach (diluted by adding 1 part bleach to 9 parts water) or 70% rubbing alcohol for objects that can be damaged by bleach.

Wear a mask and gloves when washing surfaces or doing laundry. Wash your hands before and after putting on gloves.

Designate a set of dishes, cups, and utensils that is just for use by the person who is sick.

07/25/2021 - E-Visit in Initial Department (continued)

Messages (continued)

Designate a set of sheets, bedding, and towels for the person who is sick. Wash them in hot water before use by others.

When possible, open windows to shared spaces for good airflow. Turn off central air conditioning/heat.

Keep pets away from the person who is sick.

Avoid close contact with the person who is sick and try to stay at least 6 feet away.

Avoid contact with any bodily fluids, like saliva or mucus. Wash your hands immediately if exposed.

Avoid having visitors.

Do not touch your eyes, nose, or mouth with unwashed hands.
Do not share clothes, toothbrushes, and other personal items.

INFORMATION FOR CLOSE CONTACTS OF PERSONS WITH KNOWN CORONAVIRUS 2019 (COVID-19)

If you have had close contact with someone who is confirmed to have, or being evaluated for COVID-19, you should:

1. Monitor your health. Start from the day you first had close contact with the patient and continue for 10 days after you last had close contact with the person.

Watch for these signs and symptoms:

Fever. Take your temperature twice a day.

Coughing.

Shortness of breath or trouble breathing.

Other early symptoms to watch for are chills, body aches, sore throat, headache, diarrhea, nausea/vomiting, and runny nose.

If you develop fever or any of these symptoms, call your healthcare provider right away and let them know about being a close contact to a patient with confirmed or suspected COVID-19 so they can prepare for your visit.

2. If after 10 days you do not have any symptoms, you can continue with your daily activities, such as going to work, school, or other public areas

For more information visit publichealth.lacounty.gov/acd/nCorona2019.htm

Diarrhea

- Diarrhea is one of the most commonly occurring health problems affecting all ages. It is your

07/25/2021 - E-Visit in Initial Department (continued)

Messages (continued)

body's way of quickly clearing viruses, bacteria, or toxins from the digestive tract.

- Diarrhea that comes on suddenly may last up to 14 days.
- Diarrhea and vomiting can cause your body to lose large amounts of water, nutrients, and essential minerals called electrolytes.
- This happens faster and is more serious in babies, young children, and older adults.

Diet

- Take frequent, small sips of water or rehydration drink (Gatorade, vitamin water, juice, etc.) and small bites of salty crackers.
- Try to increase your fluid intake to at least 1 qt (1 L) per hour for 1 to 2 hours or until diarrhea symptoms disappear.
 - o Caution: patients on fluid restrictions should not exceed their normal fluid intake limits without MD approval
- Begin eating mild foods
 - o Avoid fatty foods and high sugar foods or drinks
 - o Note: BRAT (bananas, rice, applesauce, and toast) is not contraindicated, it just doesn't offer protein and balance like a regular diet does
- Avoid spicy foods, fruits, alcohol, and caffeine until 48 hours after all symptoms have disappeared
- Avoid chewing gum that contains sorbitol
- Avoid milk for 3 days after symptoms disappear. May eat cheese or yogurt with probiotics

Medication

- Discontinue all diarrhea causing OTC meds such as laxatives, antacids
- For diarrhea while on antibiotics may try yogurt containing active cultures of *Lactobacillus acidophilus*
- If on diarrhea causing medication such as antibiotic AND diarrhea is severe, discontinue use of med until prescribing MD can be consulted. Have patient call/message MD within 12 hours
- Consider OTC Imodium (except if food poisoning suspected) if diarrhea not responding to diet changes and frequency of stools intolerable
- DO NOT use antidiarrheal medications with bloody stools, abdominal pain, high fever

Irritated Rectal Area

- Change diapers, underpads, or briefs as soon as soiled or wet
- Gently wash with warm water and soft cloth (use mild soap if area soiled); rinse and pat dry
- If skin raw, try sitz baths in 15-20 min warm water with 2-3 TBSP baking soda 2-3 times a day
- Consider barrier ointment to protect and soothe rectal area: zinc oxide (Desitin), petroleum jelly/Vaseline or A&D medicated ointment
 - o Re-apply after each bowel movement or PRN (no need to remove all cream from prior application)
- Wash hands well with soap and water after applying ointment
- Consider OTC Medication for discomfort

07/25/2021 - E-Visit in Initial Department (continued)

Messages (continued)

Nausea

- Try acupressure
 - o Place the tip of your right index finger on the underside of your left wrist, about 1.5 in. (4 cm) from your hand
 - o Acupressure points are very small, so you may need to try this method more than one time
 - o Apply moderate pressure for 2 to 3 minutes
 - o Repeat as needed
- Acupressure bands, which are available for motion sickness, may help reduce nausea
- Suck on peppermint candy, or chew a peice of peppermint gum. Peppermint may relax tight muscles in stomach and help decrease the stomach contractions that may be causing nausea.

Vomiting

- Rest in bed until you are feeling better.
- Note: The acid in vomit can erode dental enamel and cause tooth decay (cavities). Rinse mouth with water after vomiting. Brush teeth if possible.
- After vomiting has stopped for 1 hour, drink 1 fl oz (30 mL) of a clear liquid every 20 minutes for 1 hour
 - o Clear liquids: apple or grape juice mixed to half strength with water, rehydration drinks, weak tea with sugar, clear broth, gelatin (jello), etc.
 - o Avoid orange juice, grapefruit juice, tomato juice, and lemonade
 - o Avoid apple and grape juice if you also have diarrhea.
 - o DO NOT drink milk products, alcohol, or carbonated drinks such as sodas
- If you do not have any more vomiting, increase the amount of fluid you drink to 8 fl oz (240 mL) during the second hour.
- If you are not vomiting after the second hour, continue to drink enough to prevent dehydration
- When you are feeling better, begin eating clear soups, mild foods, and liquids until all symptoms are gone for 12 to 48 hours.
- Broth, jello, dry toast, crackers, and cooked cereal are good choices.
- Avoid strong food odors, which can make nausea worse.

Vomited Medication

- If vomited essential medicine and entire capsule/pill is seen in emesis, may repeat dose
- If vomited less than 10 minutes after med was given, may repeat dose
- If vomited more than 10 minutes after med was given, DO NOT repeat dose

COUGH

HOME CARE

- Viral illnesses usually last 1-2 weeks
- Cough and fatigue (related to cold/flu) may last several weeks
- Contagious as long as symptoms persist

07/25/2021 - E-Visit in Initial Department (continued)

Messages (continued)

There are several things you can do to feel better.

- Rest if you feel tired.
 - Drink adequate fluids
 - o Drink warm fluids (warm juice, herbal tea, soup, broth, etc).
 - o Caution: If on daily fluid restriction, check with PCP BEFORE drinking extra fluids
 - DO NOT smoke or vape
 - Running a humidifier may help relieve congestion and soothe a sore throat
 - May consider OTC medications for symptom relief
 - Consider cough drop, hard candy or throat lozenges
 - Use humidifier or vaporizer with plain water and breathe in mist
-
- o DO NOT add medication to the water.
 - o Remember to clean the machine after each use

- Elevate head with extra pillows at night
- To temporarily stop a runny nose, use an antihistamine or decongestant nasal spray
 - o Nasal spray delivers medication directly to your nose and has less effect on blood pressure.
 - o Remember to monitor BP while using sprays
 - o DO NOT use sprays longer than 3 days
- Consider OTC decongestant, cough suppressant, expectorant, or antihistamine (depending on most prominent symptoms)

Sore Throat

For the sore throat itself, gargle with warm salt water. Gargle at least once each hour with one teaspoon (5 g) of salt dissolved in eight fluid ounces (240 mL) of warm water. Throat lozenges may also help.

For the sore throat pain, try acetaminophen as directed on the label. If this does not work, try ibuprofen or naproxen, but be sure to read the package insert for the conditions that preclude you from using these medications. For example, do not use acetaminophen if you have liver disease and do not use ibuprofen or naproxen if you have liver or kidney disease. Do not drink alcohol if you're using any pain medication.

Prevent dehydration by drinking plenty of fluids. Fluids may also help thin secretions and soothe an irritated throat. Warm fluids, such as tea or soup, may help decrease throat irritation. Use a humidifier in your bedroom.

Warm or cool mist may help you feel more comfortable by soothing the swollen air passages. It may also relieve hoarseness. But don't let your room become uncomfortably cold or very damp.

Use a shallow pan of water to provide moisture in the air through evaporation if you don't have a humidifier. Place the pan in a safe location where no one will trip on it or fall into it.

Do not smoke or use other tobacco products and avoid secondhand smoke.

07/25/2021 - E-Visit in Initial Department (continued)

Messages (continued)

Fever or Pain

Take Tylenol (acetaminophen) *Do not take if hx liver disease, hepatitis, chronic alcoholism, or allergic.

DO NOT take aspirin, ibuprofen, or other NSAIDS during pregnancy.

CALL BACK INSTRUCTIONS

- If symptoms worsen or new ones develop
- Unable to take or hold down liquids
- Fever greater than 102°
- Worsening abdominal pain
- Monitor breathing closely AND call back if it worsens
- Increasing SOB, wheezing, or chest pain
- Coughing up blood
- Cough lasting more than 3 weeks
- Symptoms return within days of recovery (full or partial) from initial illness.

Telephone appointment

7/26/2021

Albert Tran, MD
Family Medicine
Huntington Beach MOB

HPI:

Michelle E Tiu is a 44 year old female

Chief Complaint

Patient presents with

- COUGH

mild cough x 3 days.

No fevers/chills, shortness of breath.

patient has been vaccinated for COVID.

Patient appears in no distress over the phone.

ASSESSMENT:**Encounter Diagnoses**

Code	Name	Primary?
• J06.9	URI (UPPER RESPIRATORY INFECTION)	

PLAN:

Patient tested for COVID earlier today.

Off work note tomorrow while waiting for results.

Supportive care.

All questions fully answered.

Patient verbalized understanding and agreed with the plan.

Follow up if not better.

I spent 10 minutes with patient.

SARS-COV-2 (COVID-19), QUALITATIVE, NAA	Not Detected	Not Detected	—	SCPMG

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as PCR or TMA).

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SARS-CoV-2 RNA present.

Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management.

Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection.

08/05/2021 - Released Future/Standing Orders in EMPLOYEE HEALTH (continued)

Labs (continued)

Consider repeat testing if clinically indicated.

Inconclusive. Not all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

8/7/2021 10:27 AM

Dear Ms. Tiu,

Your COVID-19 (coronavirus) sample did NOT show any signs of the COVID-19 virus. This is a good result. However, it's important to understand that this does not 100% rule out COVID-19, but makes it much less likely.

If you were tested because of symptoms that were concerning for possible COVID-19 then I advise that you continue to home isolate until you are fever free (off of fever reducing medications) for at least 24 hours and any respiratory symptoms like a cough or shortness of breath are improved. After your home isolation period ends, please continue social distancing and masking as recommended by public health officials.

Also, if you had an exposure to COVID-19 and were infected it, can take up to 14 days after exposure for the test to turn positive so you should continue to isolate till 14 days after exposure even with a negative test result (this may not apply to essential workers).

Please continue to monitor your symptoms. If you develop worsening cough, shortness of breath, or ongoing fever, call 833-574-2273 to schedule a virtual appointment.

If you experience urgent symptoms such as severe shortness of breath or chest pain, confusion, lips are turning blue, or inability to eat or drink, you need to go to the emergency room or call 911 for emergency services.

Please be advised if you seek further medical care you should inform the patient screener that you have tested for COVID-19 and it was "Not Detected".

Sincerely,

CAROL ANN AHMED DO

SARS-COV-2 (COVID-19), QUALITATIVE, NAA	Not Detected	Not Detected	—	SCPMG

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as PCR or TMA).

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SARS-CoV-2 RNA present.

Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management.

Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated.

Inconclusive. N

ot all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

SARS-COV-2 (COVID-19), QUALITATIVE, NAA	Not Detected	Not Detected	—	SCPMG

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as PCR or TMA).

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

09/14/2021 - Released Future/Standing Orders in EMPLOYEE HEALTH (continued)**Labs (continued)**

Positive / Detected. SARS-CoV-2 RNA present.
Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management.
Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection.
Consider repeat testing if clinically indicated.

Inconclusive. N
ot all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

Last updated: 9/24/2021 1:01 PM PDT

Have you received your first COVID-19 vaccine dose outside of Kaiser Permanente?

Yes

Did you receive your second COVID-19 vaccine dose outside of Kaiser Permanente?

Yes

Do you need an additional COVID-19 Vaccine dose?

I would like to receive an additional dose of the vaccine as I AM immunocompromised.

It is VERY IMPORTANT to schedule your 3rd dose vaccine 28 days from your 2nd dose to significantly improve protection from COVID-19 infection. Please schedule an appointment to receive your vaccine. You do not have to call your clinician for the vaccine order.

Join the COVID-19 Vaccine Side Effect Monitoring System for Elizabeth Tiu

From Permanente, Kaiser Last Read in kp.org 10/20/2021 3:39 PM by Tiu, Michelle E	To Tiu, Michelle E	Sent and Delivered 9/30/2021 3:49 PM
--	-----------------------	---

Help us keep vaccines safe by joining Kaiser Permanente's COVID-19 Vaccine Side Effect Monitoring System for Elizabeth Tiu!

By participating in our Side Effect Monitor, you can tell Kaiser Permanente if Elizabeth Tiu experiences any side effects after their recent COVID-19 vaccine. We'll send you regular questions about their side effects for up to 5 weeks. Answers are anonymous and will be used for research and quality improvement only. This information helps us monitor vaccine safety and quickly notify public health departments if we notice concerns that could be related to COVID-19 vaccines.

This is a joint effort with the Centers for Disease Control and Prevention (CDC) - it's part of our nation's comprehensive approach to vaccine safety.

Join now <https://kaiserpermanente.page.link/eT1D>

You received this message because you are a Kaiser Permanente member. To end messages from the Kaiser Permanente COVID-19 Vaccine Side Effect Monitoring System, unsubscribe here <https://kaiserpermanente.page.link/XB6R>.

Patient Instructions (continued)

Patient Education

**VACCINE INFORMATION FACT SHEET FOR RECIPIENTS AND CAREGIVERS
ABOUT COMIRNATY (COVID-19 VACCINE, mRNA)
AND PFIZER-BIONTECH COVID-19 VACCINE TO PREVENT CORONAVIRUS
DISEASE 2019 (COVID-19)**

You are being offered either COMIRNATY (COVID-19 Vaccine, mRNA) or the Pfizer-BioNTech COVID-19 Vaccine to prevent Coronavirus Disease 2019 (COVID-19) caused by SARS-CoV-2.

This Vaccine Information Fact Sheet for Recipients and Caregivers comprises the Fact Sheet for the authorized Pfizer-BioNTech COVID-19 Vaccine and also includes information about the FDA-licensed vaccine, COMIRNATY (COVID-19 Vaccine, mRNA).

The FDA-approved COMIRNATY (COVID-19 Vaccine, mRNA) and the FDA-authorized Pfizer-BioNTech COVID-19 Vaccine under Emergency Use Authorization (EUA) have the same formulation and can be used interchangeably to provide the COVID-19 vaccination series.[1]

COMIRNATY (COVID-19 Vaccine, mRNA) is an FDA-approved COVID-19 vaccine made by Pfizer for BioNTech. It is approved as a 2-dose series for prevention of COVID-19 in individuals 16 years of age and older. It is also authorized under EUA to provide:

- a two-dose primary series in individuals 12 through 15 years;**
- a third primary series dose in individuals 12 years of age and older who have been determined to have certain kinds of immunocompromise;**
- and**
- a single booster dose in individuals:**
 - o 65 years of age and older**
 - o 18 through 64 years of age at high risk of severe COVID-19**
 - o 18 through 64 years of age whose frequent institutional or occupational exposure to SARS-CoV-2 puts them at high risk of serious complications of COVID-19 including severe COVID-19**

The Pfizer-BioNTech COVID-19 Vaccine has received EUA from FDA to provide:

- a two-dose primary series in individuals 12 years of age and older;**
- a third primary series dose for individuals 12 years of age and older who have been determined to have certain kinds of immunocompromise; and**
- a single booster dose in individuals:**
 - o 65 years of age and older**
 - o 18 through 64 years of age at high risk of severe COVID-19**
 - o 18 through 64 years of age whose frequent institutional or occupational exposure to SARS-CoV-2 puts them at high risk of serious complications of COVID-19 including severe COVID-19**

[1] The licensed vaccine has the same formulation as the EUA-authorized vaccine and the products can be used interchangeably to provide the vaccination series without presenting any safety or effectiveness concerns. The products are legally distinct with certain differences that do not impact safety or Effectiveness.

Patient Instructions (continued)

This Vaccine Information Fact Sheet contains information to help you understand the risks and benefits of COMIRNATY (COVID-19 Vaccine, mRNA) and the Pfizer-BioNTech COVID-19 Vaccine, which you may receive because there is currently a pandemic of COVID-19. Talk to your vaccination provider if you have questions.

This Fact Sheet may have been updated. For the most recent Fact Sheet, please see www.cvdvaccine.com.

WHAT YOU NEED TO KNOW BEFORE YOU GET THIS VACCINE**WHAT IS COVID-19?**

COVID-19 disease is caused by a coronavirus called SARS-CoV-2. You can get COVID-19 through contact with another person who has the virus. It is predominantly a respiratory illness that can affect other organs. People with COVID-19 have had a wide range of symptoms reported, ranging from mild symptoms to severe illness leading to death. Symptoms may appear 2 to 14 days after exposure to the virus. Symptoms may include: fever or chills; cough; shortness of breath; fatigue; muscle or body aches; headache; new loss of taste or smell; sore throat; congestion or runny nose; nausea or vomiting; diarrhea

WHAT IS COMIRNATY (COVID-19 VACCINE, mRNA) AND HOW IS IT RELATED TO THE PFIZER-BIONTECH COVID-19 VACCINE?

COMIRNATY (COVID-19 Vaccine, mRNA) and the Pfizer-BioNTech COVID-19 Vaccine have the same formulation and can be used interchangeably to provide the COVID-19 vaccination series.[1]

For more information on EUA, see the “**What is an Emergency Use Authorization (EUA)?**” section at the end of this Fact Sheet.

WHAT SHOULD YOU MENTION TO YOUR VACCINATION PROVIDER BEFORE YOU GET THE VACCINE?

Tell the vaccination provider about all of your medical conditions, including if you:

- have any allergies
- have had myocarditis (inflammation of the heart muscle) or pericarditis (inflammation of the lining outside the heart)
- have a fever
- have a bleeding disorder or are on a blood thinner
- are immunocompromised or are on a medicine that affects your immune system
- are pregnant or plan to become pregnant
- are breastfeeding
- have received another COVID-19 vaccine
- have ever fainted in association with an injection

HOW IS THE VACCINE GIVEN?

The vaccine will be given to you as an injection into the muscle.

Primary Series: The vaccine is administered as a 2-dose series, 3 weeks apart. A third dose may be administered at least 4 weeks after the second dose to individuals who are determined to have certain kinds of immunocompromise.

Booster Dose: A single booster dose of the vaccine may be administered to individuals:

- 65 years of age and older
- 18 through 64 years of age at high risk of severe COVID-19
- 18 through 64 years of age whose frequent institutional or occupational exposure to SARS-CoV-2 puts them at high risk of serious complications of COVID-19 including severe COVID-19

The vaccine may not protect everyone.

Patient Instructions (continued)

WHO SHOULD NOT GET THE VACCINE?

You should not get the Vaccine if you:

- had a severe allergic reaction after a previous dose of this vaccine
- had a severe allergic reaction to any ingredient of this vaccine

WHAT ARE THE INGREDIENTS IN THE VACCINE?

The vaccine includes the following ingredients: mRNA, lipids ((4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate), 2 [(polyethylene glycol)-2000]-N,N-ditetradecylacetamide, 1,2-Distearoyl-sn-glycero-3-phosphocholine, and cholesterol), potassium chloride, monobasic potassium phosphate, sodium chloride, dibasic sodium phosphate dihydrate, and sucrose.

HAS THE VACCINE BEEN USED BEFORE?

Yes. In clinical trials, approximately 23,000 individuals 12 years of age and older have received at least 1 dose of the vaccine. Data from these clinical trials supported the Emergency Use Authorization of the Pfizer-BioNTech COVID-19 Vaccine and the approval of COMIRNATY (COVID-19 Vaccine, mRNA). Millions of individuals have received the vaccine under EUA since December 11, 2020.

WHAT ARE THE BENEFITS OF THE VACCINE?

The vaccine has been shown to prevent COVID-19.

The duration of protection against COVID-19 is currently unknown.

WHAT ARE THE RISKS OF THE VACCINE?

There is a remote chance that the Vaccine could cause a severe allergic reaction. A severe allergic reaction would usually occur within a few minutes to one hour after getting a dose of the vaccine. For this reason, your vaccination provider may ask you to stay at the place where you received your vaccine for monitoring after vaccination. Signs of a severe allergic reaction can include:

- Difficulty breathing
- Swelling of your face and throat
- A fast heartbeat
- A bad rash all over your body
- Dizziness and weakness

Myocarditis (inflammation of the heart muscle) and pericarditis (inflammation of the lining outside the heart) have occurred in some people who have received the vaccine. In most of these people, symptoms began within a few days following receipt of the second dose of vaccine. The chance of having this occur is very low. You should seek medical attention right away if you have any of the following symptoms after receiving the vaccine:

- Chest pain
- Shortness of breath
- Feelings of having a fast-beating, fluttering, or pounding heart.

Side effects that have been reported with the vaccine include:

- severe allergic reactions
- non-severe allergic reactions such as rash, itching, hives, or swelling of the face
- myocarditis (inflammation of the heart muscle)
- pericarditis (inflammation of the lining outside the heart)
- injection site pain
- tiredness
- headache
- muscle pain
- chills
- joint pain

Patient Instructions (continued)

- fever
- injection site swelling
- injection site redness
- nausea
- feeling unwell
- swollen lymph nodes (lymphadenopathy)
- decreased appetite
- diarrhea
- vomiting
- arm pain
- fainting in association with injection of the vaccine

These may not be all the possible side effects of the vaccine. Serious and unexpected side effects may occur. The possible side effects of the vaccine are still being studied in clinical trials.

WHAT SHOULD I DO ABOUT SIDE EFFECTS?

If you experience a severe allergic reaction, call 9-1-1, or go to the nearest hospital.

Call the vaccination provider or your healthcare provider if you have any side effects that bother you or do not go away.

Report vaccine side effects to **FDA/CDC Vaccine Adverse Event Reporting System (VAERS)**. The VAERS toll-free number is 1-800-822-7967 or report online to <https://vaers.hhs.gov/reportevent.html>. Please include either "COMIRNATY (COVID-19 Vaccine, mRNA)" or "Pfizer-BioNTech COVID-19 Vaccine EUA", as appropriate, in the first line of box #18 of the report form.

In addition, you can report side effects to Pfizer Inc. at the contact information provided below.

Website	Fax number	Telephone number
www.pfizersafetyreporting.com	1-866-635-8337	1-800-438-1985

You may also be given an option to enroll in v-safe. V-safe is a new voluntary smartphone-based tool that uses text messaging and web surveys to check in with people who have been vaccinated to identify potential side effects after COVID-19 vaccination. V-safe asks questions that help CDC monitor the safety of COVID-19 vaccines. V-safe also provides second-dose reminders if needed and live telephone follow-up by CDC if participants report a significant health impact following COVID-19 vaccination. For more information on how to sign up, visit: www.cdc.gov/vsafe.

WHAT IF I DECIDE NOT TO GET COMIRNATY (COVID-19 VACCINE, mRNA) OR THE PFIZER-BIONTECH COVID-19 VACCINE?

Under the EUA, it is your choice to receive or not receive the vaccine. Should you decide not to receive it, it will not change your standard medical care.

ARE OTHER CHOICES AVAILABLE FOR PREVENTING COVID-19 BESIDES COMIRNATY (COVID-19 VACCINE, mRNA) OR PFIZER-BIONTECH COVID-19 VACCINE?

Other vaccines to prevent COVID-19 may be available under Emergency Use Authorization.

CAN I RECEIVE THE COMIRNATY (COVID-19 VACCINE, mRNA) OR PFIZERBIONTECH COVID-19 VACCINE AT THE SAME TIME AS OTHER VACCINES?

Data have not yet been submitted to FDA on administration of COMIRNATY (COVID19 Vaccine, mRNA) or the Pfizer-BioNTech COVID-19 Vaccine at the same time with other vaccines. If you are considering receiving COMIRNATY (COVID-19 Vaccine, mRNA) or the Pfizer-BioNTech COVID-19 Vaccine with other vaccines, discuss your options with your healthcare provider

WHAT IF I AM IMMUNOCOMPROMISED?

Patient Instructions (continued)

If you are immunocompromised, you may receive a third dose of the vaccine. The third dose may still not provide full immunity to COVID-19 in people who are immunocompromised, and you should continue to maintain physical precautions to help prevent COVID-19. In addition, your close contacts should be vaccinated as appropriate.

WHAT IF I AM PREGNANT OR BREASTFEEDING?

If you are pregnant or breastfeeding, discuss your options with your healthcare provider.

WILL VACCINE GIVE ME COVID-19?

No. The vaccine does not contain SARS-CoV-2 and cannot give you COVID-19.

KEEP YOUR VACCINATION CARD

When you get your first dose, you will get a vaccination card to show you when to return for your next dose(s) of the vaccine. Remember to bring your card when you return.

ADDITIONAL INFORMATION

If you have questions, visit the website or call the telephone number provided below.

To access the most recent Fact Sheets, please scan the QR code provided below.

Global website
www.cvdvaccine.com

Telephone number
1-877-829-2619
(1-877-VAX-CO19)

HOW CAN I LEARN MORE?

- Ask the vaccination provider.
- Visit CDC at <https://www.cdc.gov/coronavirus/2019-ncov/index.html>.
- Visit FDA at <https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization>.
- Contact your local or state public health department.

WHERE WILL MY VACCINATION INFORMATION BE RECORDED?

The vaccination provider may include your vaccination information in your state/local jurisdiction's Immunization Information System (IIS) or other designated system. This will ensure that you receive the same vaccine when you return for the second dose. For more information about IISs visit:

<https://www.cdc.gov/vaccines/programs/iis/about.html>.

CAN I BE CHARGED AN ADMINISTRATION FEE FOR RECEIPT OF THE COVID-19 VACCINE?

No. At this time, the provider cannot charge you for a vaccine dose and you cannot be charged an out-of-pocket vaccine administration fee or any other fee if only receiving a COVID-19 vaccination. However, vaccination providers may seek appropriate reimbursement from a program or plan that covers COVID-19 vaccine administration fees for the vaccine recipient (private insurance, Medicare, Medicaid, Health Resources & Services Administration [HRSA] COVID-19 Uninsured Program for noninsured recipients).

WHERE CAN I REPORT CASES OF SUSPECTED FRAUD?

Individuals becoming aware of any potential violations of the CDC COVID-19 Vaccination Program requirements are encouraged to report them to the Office of the Inspector General, U.S. Department of Health and Human Services, at 1-800-HHS-TIPS or <https://TIPS.HHS.GOV>

Patient Instructions (continued)

WHAT IS THE COUNTERMEASURES INJURY COMPENSATION PROGRAM?

The Countermeasures Injury Compensation Program (CICP) is a federal program that may help pay for costs of medical care and other specific expenses of certain people who have been seriously injured by certain medicines or vaccines, including this vaccine. Generally, a claim must be submitted to the CICP within one (1) year from the date of receiving the vaccine. To learn more about this program, visit www.hrsa.gov/cicp/ or call 1-855-266-2427.

WHAT IS AN EMERGENCY USE AUTHORIZATION (EUA)?

An Emergency Use Authorization (EUA) is a mechanism to facilitate the availability and use of medical products, including vaccines, during public health emergencies, such as the current COVID-19 pandemic. An EUA is supported by a Secretary of Health and Human Services (HHS) declaration that circumstances exist to justify the emergency use of drugs and biological products during the COVID-19 pandemic.

The FDA may issue an EUA when certain criteria are met, which includes that there are no adequate, approved, available alternatives. In addition, the FDA decision is based on the totality of scientific evidence available showing that the product may be effective to prevent COVID-19 during the COVID-19 pandemic and that the known and potential benefits of the product outweigh the known and potential risks of the product. All of these criteria must be met to allow for the product to be used in the treatment of patients during the COVID-19 pandemic.

This EUA for the Pfizer-BioNTech COVID-19 Vaccine and COMIRNATY will end when the Secretary of HHS determines that the circumstances justifying the EUA no longer exist or when there is a change in the approval status of the product such that an EUA is no longer needed.

1. MAMMO BILAT SCREENING SEQUENTIAL W OR WO COMPUTER AIDED DETECTION ANALYSIS [1347132855]
ordered by Interface, Scal_Radiology at 10/15/21 0940

- MAMMO SCREENING BILAT SEQUENTIAL W OR WO COMPUTER AIDED DETECTION ANALYSIS

BILATERAL DIGITAL SCREENING MAMMOGRAM SEQUENTIAL: 10/15/2021

CLINICAL: Screening digital mammogram, no complaints. Sequential. 3rd

10/15/2021 - Ancillary Orders in FAMILY PRACTICE (continued)**Clinical Notes (continued)**

dose Covid booster: 10/1/21 right arm.

Comparison is made to prior exams. Both breasts are extremely dense, which lowers the sensitivity of mammography.

No significant masses, calcifications, or other findings are seen in either breast.

There has been no significant interval change.

IMPRESSION: BENIGN

There is no mammographic evidence of malignancy. A routine screening mammogram is recommended within 2 years.

Kaiser Permanente regional guidelines recommend annual screening mammography for high risk patients and screening mammography within 2 years for normal low risk patients. Determination of risk assessment by radiology is limited and ultimately should be determined by the patient's primary care provider in collaboration with the patient.

Mammograms do not detect all breast cancer. Up to 15 percent of breast

cancer can't be detected by mammography. Patients with palpable abnormalities may require further investigation.

(10/16/2023)

Disposition and Responsibility

A letter with these results will be sent to the patient by the Mammography Department.

Non-urgent medical question

From Samuel E (M.D.) Chung, M.D. Last Read in kp.org 11/9/2021 8:36 PM by Tiu, Michelle E	To Tiu, Michelle E	Sent and Delivered 11/9/2021 8:21 PM
--	-----------------------	---

Hello, I am covering your doctor's emails today - Atoian, Ani Ardashian (M.D.)
I hope I addressed your concerns. If not, you can email your doctor again.

It sounds like your nerve is getting pinched while sitting - which causes the symptoms in the foot.

Try a stand up desk where you can sit and stand - to avoid prolonged sitting.

For further evaluation, you should make an appointment with Dr. Atoian - Please call the Kaiser Appointment Center at 1-833-574-2273 - to request a telephone or in-clinic appointment.

Non-urgent medical question

From Tiu, Michelle E	To P Famocimo2 Call Ctr Pool (supporting Ani Ardashian (M.D.) Atoian, M.D.)	Sent 11/8/2021 8:46 PM

11/08/2021 - Patient Message in FAMILY PRACTICE (continued)

Messages (continued)

Hi Dr. Atoian, so glad to see you. I forgot to mention. Several times a week my foot my go numb sometimes. It happens after sitting for a while and then I want to stand up. Sometimes it cramps up so bad, I have to massage my foot get feeling back and be able to move my foot again.

I was wondering if this is normal. I get it from time to time throughout my whole life but didn't know what causes this.

Thank you,
Michelle Tiu

OBJECTIVE:

11/08/2021 - Office Visit in FAMILY PRACTICE (continued)**Clinical Notes (continued)**

BP 98/62 (BP Location: LA-LEFT ARM, BP Patient Position: SITTING, Cuff Size: Standard Adult) | Pulse 78 | Temp 97.2 °F (36.2 °C) (Temporal) | Ht 1.562 m (5' 1.5") | Wt 52.6 kg (115 lb 15.4 oz) | LMP 10/24/2021 (Approximate) | Breastfeeding No | BMI 21.56 kg/m²

Ideal body weight: 48.9 kg (107 lb 14.6 oz)

Adjusted ideal body weight: 50.4 kg (111 lb 2.1 oz)

Physical Exam

Vitals and nursing note reviewed. Exam conducted with a chaperone present (**Chariss**).

Constitutional:

Appearance: Normal appearance.

HENT:

Head: Normocephalic and atraumatic.

Right Ear: Tympanic membrane normal.

Left Ear: Tympanic membrane normal.

Nose: Nose normal.

Eyes:

Extraocular Movements: Extraocular movements intact.

Pupils: Pupils are equal, round, and reactive to light.

Cardiovascular:

Rate and Rhythm: Normal rate and regular rhythm.

Pulmonary:

Effort: Pulmonary effort is normal.

Breath sounds: Normal breath sounds.

Abdominal:

General: Bowel sounds are normal.

Palpations: Abdomen is soft.

Genitourinary:

Cervix: No cervical motion tenderness or lesion.

Uterus: Normal. Not enlarged.

Adnexa: Right adnexa normal and left adnexa normal.

Right: No mass.

Left: No mass.

Musculoskeletal:

General: Normal range of motion.

Skin:

General: Skin is warm and dry.

Neurological:

Mental Status: She is alert.

Resulting lab: SHERMAN WAY REGIONAL LABORATORY

Narrative:

RMS ACCN: 709993457

Acknowledged by: Atoian, Ani Ardashian (M.D.), M.D. on 11/10/21 2015

Components

Component	Value	Reference Range	Flag	Lab
HPV 16 DNA, CERVIX, PCR	Negative	Negative	—	956
HPV 18 DNA, CERVIX, PCR	Negative	Negative	—	956
HPV, OTHER HIGH RISK, CERVIX, PCR	Negative	Negative	—	956

Comment:

Other High Risk HPV DNA genotypes include the following: 31, 33, 35, 39, 45, 51, 52, 56, 58, 59, 66, 68.

A negative result does not preclude the presence of HPV infection because results depend on adequate specimen collection, absence of inhibitors and sufficient DNA to be detected.

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	5.4	4.6 - 5.6 %	—	SCPMG

Comment:

A repeatable HbA1c > or = 6.5% is diagnostic of diabetes. A single HbA1c > or = 6.5% can also be confirmed by a fasting plasma glucose measurement > 125 mg/dL, a random plasma glucose > or = 200 mg/dL, or a 2 hour oral glucose tolerance test result > or = 200 mg/dL. Patients with HbA1c of 5.7-6.4% are at increased risk for future diabetes.

VITAMIN D, 25-HYDROXY [1371683027]

Resulted: 11/22/21 0104, Result status: Final result

Order status: Completed
Collected by: Q014938 11/19/21 0823
Narrative:
RMS ACCN: 710718452
Acknowledged by: Atoian, Ani Ardashian (M.D.), M.D. on 11/22/21 0611

Filed on: 11/22/21 0104
Resulting lab: SHERMAN WAY REGIONAL LABORATORY

Components

Component	Value	Reference Range	Flag	Lab
VITAMIN D, 25-HYDROXY, D3	46	ng/mL	—	956
VITAMIN D, 25-HYDROXY, D2	<4	ng/mL	—	956
25-HYDROXYVITAMIN D	46	30 - 100 ng/mL	—	956

Comment:

There is general consensus (Endocrine Society, Natl Osteoporosis FDN, K_DOQI) that 25-OH Vitamin D measurements > 30 ng/mL are desirable. However, most Americans are deficient by this standard (NHanes III).

Levels <10 ng/mL are consistent with a diagnosis of Rickets/Osteomalacia.

Infants normally produce Vitamin D metabolites that falsely elevate 25-OH Vitamin D measurements. Please order D,25-Hydroxy, Neonatal [82306D] for these patients.

This test was developed and its performance characteristics determined by each applicable laboratory in the Southern California Permanente Medical Group Laboratory System where the test is performed. It has not been cleared or approved by the FDA. Each applicable laboratory is regulated under CLIA as qualified to perform high-complexity testing. This test is used for clinical purposes. It should not be regarded as investigational or for research.

Patient Instructions

Your doctor recommends that all adults plan for life's “what ifs” and identify their future health care choices in an Advance Health Care Directive. An Advance Health Care Directive (also known as a Living Will) is a form where you can write down your values and choose a health care decision maker.

We have **Life Care Planning** services that will help you reflect upon your values and beliefs so you may write down your future health care decisions in an Advance Health Care Directive. This type of planning can also help prepare your health care decision maker to honor your wishes.

You can begin your Life Care Planning by following these steps:

1. Call your local Center for Healthy Living department to sign up for a **Life Care Planning workshop** or you can now register for a Life Care Planning Workshop online! Sign in to or register with KP.org, go to Appointment Center, schedule an appointment, Select “Health Education Programs”, then Life Care Planning.

2. Go to kp.org/lifecareplan to view videos and complete and print an interactive Advance Health Care Directive. Be sure to talk with your health care decision maker about your treatment preferences.

3. Your health care team wants to know your wishes. Once completed, have your Advance Directive notarized **or** have two witnesses sign it.

Email a copy to: scalcentralized-scanning-center@kp.org OR

Mail a copy to: Kaiser Permanente, Central Scanning Center, 1011 S. East Street, Anaheim, CA 92805. If you already have an Advance Health Care Directive or completed one as part of a living trust , please **email or send in a copy** to the address above.

4. We recommend you review your Advance Health Care Directive often to make sure it reflects your

11/08/2021 - Office Visit in FAMILY PRACTICE (continued)

Patient Instructions (continued)

current values and wishes. Visit kp.org/lifecareplan or attend a workshop to help you and your health care decision maker think and talk about what you would want as your life changes.

5. Talk with your loved ones so they understand your wishes and can follow them.

These are important decisions to make. Life Care Planning is a gift you can give yourself and your family. We encourage you to start your planning today!

Dear Michelle E Tiu,

Dr. Atoian has sent you an email that has not been read yet through our kp.org website. She would like to inform you that she has reviewed your labs. Overall everything is good.

Your ferritin is slightly elevated; this is not specific to anything but I do recommend we recheck it in 2 months. I have placed the order.

Sincerely,

YVETTE GARCIA LVN on behalf of Atoian, Ani Ardashian (M.D.)

Which of the following COVID-19 concerns is your reason for visit?

COVID-19, Cold, Cough, Sore Throat: Testing and Off Work/School Note

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Are you pregnant or possibly pregnant?

No

Have you had a baby in the past 6 weeks?

No

Do you have any of the following conditions?

No, I do not have any of the above conditions.

We provide a detailed clinical evaluation via this E-visit with a series of questions to direct you to the appropriate care based on your careful answers.

I do not feel too sick and do not have the above condition and would like to be tested.

Do you currently have any of the following symptoms?

Fever

No

New cough or worsening of a long-standing cough

Yes

New loss of taste or smell (Anosmia)

No

Nausea or Vomiting

No

Headache that is different from past typical headache

No

Repeated shaking chills

No

Diarrhea (frequent loose or watery stool)

No

Sore throat

No

Muscle aches/pain over entire body

Yes

Nasal congestion or runny nose

12/29/2021 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

SARS-COV-2 (COVID-19), QUALITATIVE, Not Detected Not Detected — SCPMG
NAA

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as RT-PCR or TMA).

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SARS-CoV-2 RNA present.

Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management.

Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated.

Inconclusive

. Not all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

- Click on the button to access a list of locations along with the hours of operations. Take a screenshot or photo of this list for your reference.

[Testing Locations](#)

- Results are available within **3-4 days** of specimen collection. Plan your testing accordingly to ensure timely processing and return of test results. If you do not receive a notification **after 5 days** from the test date, please call the Appointment Center at [1-833-574-2273](tel:1-833-574-2273) (TTY 711) or notify your provider.

You will receive an automatic notification with a link to a letter providing guidance on self-isolation. The letter can be found for:

- Age 18 or older - under **Medical Records > Letters** section.
- Age under 18 - under **Message Center > Inbox** section.

You can always click on the E-visit History located at the bottom of the E-visit menu for a copy of these instructions.

Note: To manage your health and find many useful resources including your customized Personal Action Plan, visit kp.org/actionplan to see what you can take control of today!

Thank you for completing this E-visit. Hope you stay safe.

Selftriage Selfcare Cold_Flu Na Adult Regn_Ga Peq_Scal

Your Care Plan  **KAISER PERMANENTE®**

12/31/2021 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

Common Cold, COVID-19, and Flu are contagious respiratory illnesses caused by different viruses.

Colds: infection with rhinovirus and many other viruses

- Symptoms include sore throat, runny nose, coughing, sneezing, headaches, and body aches.

COVID-19: infection with coronavirus (SARS-CoV-2)

- COVID-19 can cause more severe illness in some people than the flu and it may take longer for them to develop symptoms or to get better. Patients with COVID-19 may also be contagious for a longer time than those with the flu.

Flu: infection with seasonal flu virus

- Seasonal influenza is a respiratory illness that can affect the nose, throat, and lungs. Flu viruses spread when infected people cough, sneeze or talk. The illness can vary from mild to severe.

Home Care for viruses

Note: As with any over the counter (OTC) medication, carefully read the label to make sure this medication is right for you and follow all of the instructions.

- Get plenty of rest
- Drink more fluids such as water, Pedialyte or Gatorade
- If you have fluid restrictions for health reasons, discuss this with your healthcare team
- **Fever, muscle aches, headache:** Take over the counter (OTC) pain medicine such as acetaminophen (Tylenol), ibuprofen (Advil, Motrin), or naproxen (Aleve) as directed. Do not use ibuprofen or naproxen if you have a history of stomach ulcers or kidney disease.
- **Cough:** OTC cough syrup such as Robitussin or cough drops (sugar free for diabetics), try an extra pillow at night to elevate your head for cough due to postnasal drip, use a humidifier in bedroom
- **Nasal/Sinus congestion:** Use nasal saline rinses and anti-inflammatory nose sprays: fluticasone (Flonase), triamcinolone (Nasacort), or try oral decongestants such phenylephrine (Sudafed) or Pseudoephedrine (ask pharmacist to purchase it behind the pharmacy counter). Do not use decongestants if you have high blood pressure
- **Sore throat:** Keep throat moist, drink warm tea or soup, suck on herbal lozenges or use OTC throat sprays, eat soft foods, or try salt gargles by mixing one cup warm water and 1-2 tsp of salt
Note: If you have sore throat with fever that is not getting better with self-care, there is a small possibility that your symptoms may be from strep infection. You should discuss your symptoms with your health care team.
- **Sore nose/dry lips:** Apply petroleum jelly (Vaseline or Aquaphor)
- **Pregnant/ Nursing:** You may use Delsym 12 hour, Robitussin DM, Mucinex DM, Tylenol, Nasal Saline spray and Flonase to help with your symptoms. Do not use ibuprofen (Advil, Motrin), naproxen (Aleve), Sudafed (phenylephrine or Pseudoephedrine), or Afrin. If you need further guidance, consult your pharmacist or healthcare team.
- Continue taking your prescribed medicine exactly as directed
- Do not smoke since it will worsen flu symptoms

When to seek emergency medical help

- Trouble breathing
- Pale, blue lips or nail beds
- Persistent pain or pressure in chest

12/31/2021 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

- Temp 103.0 F or more
- Inability to stay awake
- New confusion or disorientation
- Feeling faint, lightheaded, or weak

Available Prescription Treatments

Note: Most **healthy people** with the Common Cold, COVID-19 and Flu will get better with home care and rest and may not benefit from antiviral medications.

- **Common Cold:** There is no cure or antiviral medication available for colds, and many patients will feel better with home care, fluids, rest, and over the counter medication.
- **COVID-19:** Antiviral medications such as Paxlovid are recommended for some **high-risk patients** and should be started as soon as possible up to 5 days after symptoms start.
- **Flu:** Antiviral medications such as Tamiflu are recommended for **high-risk patients** and should be started as soon as possible up to 5 days after symptoms start.

Controlling Spread of Infection

- Wash hands or use alcohol-based hand sanitizers
- Cover your cough and sneezes
- Avoid crowded places
- Move indoor activity outdoors, improve ventilation in the home by opening windows and circulating air with fans, replace air filters to ensure they are properly fitted. Update new filters with a higher filtration if able.
- Keep vaccinations up to date

When to end isolation for COVID-19:

Covid 19 CDPH recommendation link: <https://covid19.ca.gov/quarantine-and-isolation/#calculate-your-isolation>

Common Cold and Flu: If you test negative for Covid-19, you may end your isolation after your symptoms have improved and it has been 24 hours since your fever has resolved without the use of fever reducing medications.

Other Health Care Recommendation for you

To manage your health and find many useful resources including your customized Personal Action Plan. Please visit kp.org/actionplan to see what you can take control of today!

Hi Dr. Atoian,

After my booster I had a fever, very sore arm, and headaches and had to stay in bed all day. My work needs a note that I had an adverse effect from the booster. Can you please write a letter to excuse me for the day after I received the booster?

Thank you,
Michelle Tiu

END OF ENCOUNTER

01/10/2022 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT

Visit Information

Self Triage Covid-19 Group Dt Scal

Last updated: 1/10/2022 8:53 AM PDT

Which of the following COVID-19 concerns is your reason for visit?

No Symptoms, Need Testing

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Do you have new difficulty breathing and worse shortness of breath when walking fast or up the stairs?

No

Do you currently have any of the following symptoms?

01/10/2022 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

Fever

No

New cough or worsening of a long-standing cough

No

New loss of taste or smell (Anosmia)

No

Nausea or Vomiting

No

Headache that is different from past typical headache

No

Repeated shaking chills

No

Diarrhea (frequent loose or watery stool)

No

Sore throat

No

Muscle aches/pain over entire body

No

Nasal congestion or runny nose

No

Would you like to take the diagnostic test which checks for current COVID-19 infection?

Yes, I would like to take this test

Why do you need to be tested?

I am a healthcare worker

Are you a Kaiser Permanente physician, clinical staff, or non-clinical employee?

Yes

Where do you work? If you work at the more than one location, select your preferred location for testing.

Orange County

Do you agree to this advice?

I have reviewed and understand this advice and would like to take the test

Do you need a SINGLE (one time) test order or MULTIPLE test orders for weekly or twice-weekly testing?

Multiple (four) orders

Through this E-visit, FOUR test orders are made available for you that can be used for once-a-week or twice-a-week testing. For additional orders, repeat this E-visit at least one week before completion of the fourth test. Do you agree with these statements?

I have read and agree with the above statements.

Which method would you prefer?

Saliva – Self-collection at Home (Saliva kit will be mailed to your home)

Do you agree with these statements?

I have read and agree with the above statements.

To which address should we mail the kit?

Permanent (Mailing) Address

The Kaiser Permanente Saliva Home Collection Kit will be mailed to your preferred address.

Patient Instructions

Selftriage Order C19_Asx Saliva_Bulk_Orders_Home_Kit_Inst Adult Regn Peq_Scal

Michelle E Tiu,

An COVID-19 PCR test has been ordered for you on 9/24/2024. A home collection kit will be arriving at your preferred address 2-3 business days.

Approximate Timeline for Home Collection Process:

- Order Placement → Arrival at Home: **2-3 business days.**
- Home → Lab: **1-2 days.**

01/10/2022 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)**Visit Information (continued)**

- Results in kp.org account (you will also receive an e-mail): **1-2 days.**

Along with the kit, you will receive instructions on collection and how to return the specimen. You should drop off the home collection kit (with collection saliva) enclosed in the box (received in mail) at a designated KP facility TWO days before results need to be made available. Click [here](#) to review locations for dropping off.

The UPS drop-off/pick-up option is available but NOT recommended for weekly or twice-weekly testing to avoid delay in results.

You will receive a notification from the online personal action plan (oPAP) to track home collection kit progress.

Click on [Fact Sheet for Kaiser Permanente High Throughput SARS-CoV-2 Assay](#) to learn more about your COVID-19 PCR test.

Note: To manage your health and find many useful resources including your customized Personal Action Plan, visit kp.org/actionplan to see what you can take control of today!

Thank you for taking this E-visit.

Hi Anna,

I just need a letter stating I had a headache and fever after the booster. I know these are common effects after the booster but my boss wants a letter from our doctors to cover for the time off. I didn't think I needed one since it's common knowledge that after the booster people don't feel well.

Thanks,
Michelle Tiu

Good afternoon Michelle E Tiu,

01/19/2022 - Patient Message in FAMILY PRACTICE (continued)

Messages (continued)

My name is Anna and I am a nurse assisting with email messages today. Headache, fever, swelling/pain at the injection sight, and other symptoms are common reactions that are expected after receiving the vaccine. Also, are you referring to the booster vaccine you received in October 2021? Can you specify what type of letter it is that you are requesting and what needs to be noted in that letter please?

Thank you for choosing Kaiser Permanente as your health partner. Have a great day!
Best regards,
Anna Fiapai, LVN II

Hi Dr. Atoian,

I just wanted to follow up with receiving a letter for the day after my booster, letting my work know that I had an adverse reaction after. I had a headache and mild fever the day after my booster. Can you please send me a letter to submit to my work that I had an adverse effect after the booster?

Thank you,
Michelle Tiu

Hi Dr. Atoian,

I'm doing my backyard and planting grasses and plants. I was wondering if you can send me a list of what I'm allergic to from my environmental panel years ago. Unfortunately I don't see the results. I do know I'm allergic to ragweed, some grasses, some trees, particularly Olive.

I appreciate your help.

Regards,
Michelle Tiu

Dear Michelle,

We received your recent e-mail requesting a referral for Orthopedic. An evaluation by your Primary Care Physician is needed to ensure you receive the best treatment for your concern. You may call the Appointment Center at 1-833-KP4CARE or 1-833-574-2273 and speak directly to a representative to book an appointment with your Primary Care Physician.

We would like to remind you of important screenings and other tests to keep you healthy:
Colorectal Cancer Screening Recommended

Sincerely,
RUPINDER K MAAN RN on behalf of Dr. Atoian, Ani Ardashian (M.D.)

Referral question

From
Tiu, Michelle E

To
P Famocimo2 Call Ctr Pool (supporting Ani
Ardashian (M.D.) Atoian, M.D.)

Sent
3/1/2022 9:43 PM

Hi Dr. Atoian,
I feel an achy and sore feeling along my right elbow that hasn't improved for 3 weeks. I noticed a lump as well that hasn't gone away. I had PVNS along my left ankle and it has the same feeling on my elbow. Can I get a referral to have the orthopedics check it. I use to go to Baldwin Park since they specialize in tumors around the joints.

Regards,
Michelle Tiu

VIRTUAL MEDICAL CENTER - Care on Demand -- 11:31 AM

The patient consented to receive health care services via telehealth for this encounter. Patient understands the limitations of Telemedicine due to the lack of a physical exam. Patient has agreed to move forward with today's visit despite these limitations & understands the risks of doing so. The recommendations, however, are purely based on patient's subjective information obtained via virtual encounter.

Michelle E Tiu is a 45 year old female verified by name and DOB. Patient is speaking clearly and articulately over the phone. No distress apparent.

Reason for TAV:

Patient Instructions

03/10/2022 - Telephone Appointment Visit in FAMILY PRACTICE (continued)

Patient Instructions (continued)

Patient Education

Your Kaiser Permanente Care Instructions

Tennis Elbow: Exercises

Introduction

Here are some examples of exercises for you to try. The exercises may be suggested for a condition or for rehabilitation. Start each exercise slowly. Ease off the exercises if you start to have pain.

You will be told when to start these exercises and which ones will work best for you.

How to do the exercises

Wrist flexor stretch

1. Extend your arm in front of you with your palm up.
2. Bend your wrist, pointing your hand toward the floor.
3. With your other hand, gently bend your wrist farther until you feel a mild to moderate stretch in your forearm.
4. Hold for at least 15 to 30 seconds. Repeat 2 to 4 times.

Wrist extensor stretch

1. Repeat steps 1 to 4 of the stretch above but begin with your extended hand palm down.

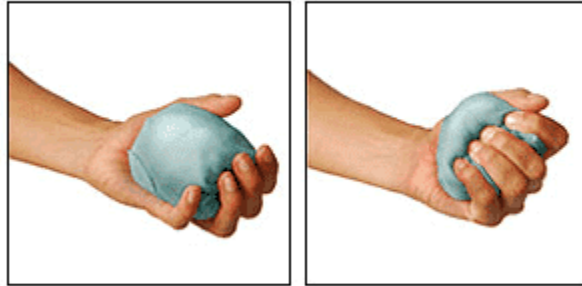

Ball or sock squeeze

1. Hold a tennis ball (or a rolled-up sock) in your hand.
2. Make a fist around the ball (or sock) and squeeze.
3. Hold for about 6 seconds, and then relax for up to 10 seconds.
4. Repeat 8 to 12 times.

03/10/2022 - Telephone Appointment Visit in FAMILY PRACTICE (continued)

Patient Instructions (continued)

5. Switch the ball (or sock) to your other hand and do 8 to 12 times.

© Healthwise, Incorporated

Wrist deviation

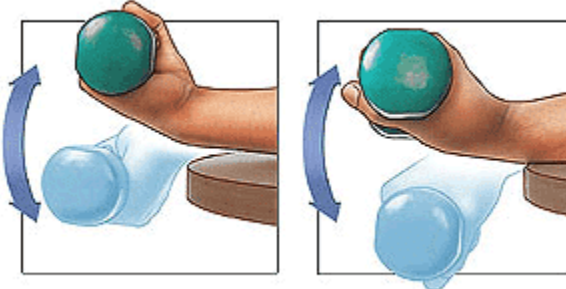

1. Sit so that your arm is supported but your hand hangs off the edge of a flat surface, such as a table.
2. Hold your hand out like you are shaking hands with someone.
3. Move your hand up and down.
4. Repeat this motion 8 to 12 times.
5. Switch arms.
6. Try to do this exercise twice with each hand.

© Healthwise, Incorporated

Wrist curls

1. Place your forearm on a table with your hand hanging over the edge of the table, palm up.
2. Place a 1- to 2-pound weight in your hand. This may be a dumbbell, a can of food, or a filled water bottle.
3. Slowly raise and lower the weight while keeping your forearm on the table and your palm facing up.
4. Repeat this motion 8 to 12 times.
5. Switch arms, and do steps 1 through 4.
6. Repeat with your hand facing down toward the floor. Switch arms.

© Healthwise, Incorporated

Biceps curls

1. Sit leaning forward with your legs slightly spread and your left hand on your left thigh.
2. Place your right elbow on your right thigh, and hold the weight with your forearm horizontal.
3. Slowly curl the weight up and toward your chest.

03/10/2022 - Telephone Appointment Visit in FAMILY PRACTICE (continued)

Patient Instructions (continued)

4. Repeat this motion 8 to 12 times.
5. Switch arms, and do steps 1 through 4.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

Telephone Appointment Visit

Michelle E Tiu is a 45 year old female

Chief Complaint

Patient presents with

- COUGH

Patient is currently on doxycycline but is still having episodes severe coughing. She states that the albuterol does help slightly but she is still staying up throughout the night coughing.

Patient Active Problem List:

TENDINITIS OF RIGHT SHOULDER
CERVICAL MYOFASCIAL PAIN SYNDROME
IUD SURVEILLANCE
FHx OF BREAST CANCER
FHx OF OVARIAN CANCER
IMPINGEMENT SYNDROME OF LEFT SHOULDER

ASSESSMENT AND PLAN:

COUGH, UNSPECIFIED (primary encounter diagnosis)

Note: Continue antibiotics and will add prednisone burst and Cheratussin with codeine to help with cough at night.

Plan: CODEINE-GUAIFENESIN 10-100 MG/5 ML ORAL LIQD

BRONCHOSPASM

Note:

Plan: PREDNISONE 20 MG ORAL TAB

Orders Placed This Encounter

- Codeine-guaiFENesin (GUAIFENESIN AC) 10-100 mg/5 mL Oral Liqd
- predniSONE (ORASONE) 20 mg Oral Tab

Diagnosis and treatment plan reviewed with patient. Advised patient that there are limitations to telephone visit and some conditions will need further evaluation in person in order to properly diagnose and provide appropriate treatment. Patient was informed to return to clinic for follow up with PCP as directed or sooner if condition is not improving or worsens.

I spent 5 minutes on the call with the patient.

Michelle E Tiu
000006993279

Patient reported worsening cough.
Coughing a lot more with green thick phlegm.
With episodes of severe coughing spasms/fits that keeps her up at night.
Noticed in the last 3 days with tiny specks of blood tinged sputum.
Onset; 3 weeks

Other symptoms reported:
none

Denies chest pain, shortness of breath, chest trauma, fever, chills, stiff neck, palpitations, leg or ankle swelling or pain,
weakness, swallowing problems, wheezing, nausea, vomiting.
Denies history of lung disease; COPD, asthma
Denies history of CHF.
Denies history of smoking or vaping.

Today, patient reported taking Prednisone 20 mg two tablets at 0830 which helped, instead of take one tablet in the morning and one in the evening.
Patient stated she took her first dose of Prednisone on 3/15/2022 around midnight and could not sleep, so on 3/16/2022, she only took the morning dose, and skipped evening dose.
Patient stated taking Prednisone 20 mg two times a day does not help.

Takes Benadryl, two tablets, at night to sleep with relief.
Takes a natural herbal over the counter medication for sleep.
Reports Codeine with Guaifenesin, Doxycycline, and Albuterol inhaler do not give her any relief.

**03/17/2022 - Telephone Appointment Visit - Allied Health/Nurse Visit in CALL CENTER TELE HEALTH
(continued)****Clinical Notes (continued)**

Takes over the counter Mucinex DM with no relief.
Uses Flonase nasal spray twice a day with no relief.

LMP 3/5/2022

Not pregnant. Not breastfeeding.

Patient repeatedly asked if it is viral or not.
Patient concerned as her cough has not improved, and now worsened.
Patient asking for advice

ADVICE CALL SUMMARY

Provider Communication: FYI

Chief Complaint: MEDICAL PROBLEMS and COUGH

Protocol Used: KPOC COUGH ADULT

Consulted with call center physician, Dr Bartolome, via TEAMS

Informed of patient's symptoms and concerns

Per Dr Bartolome, advised an office visit today or tomorrow.

Disposition: Next Day Appointment

Patient Instructions:

Drink warm fluids for spasm

CALLBACK IF: symptoms worsen, fever, pain unresponsive to home care, SOB, wheezing, cyanosis, chest pain, ALOC, syncope, or hemoptysis, ear swelling or drainage.

Informed patient of Dr Bartolome's advice

Patient instructions above provided

Informed patient to call 24 Hour Advice Nurse at 888-988-2800 if symptoms worsen or new symptoms develop as advice may change.

03/17/2022 - Telephone Appointment Visit - Allied Health/Nurse Visit in CALL CENTER TELE HEALTH
(continued)

Clinical Notes (continued)

Provided hours of operation and locations of Orange County Urgent Care Centers; may walk in, no appointment necessary if with worsening symptoms.
Informed for any emergency symptoms; severe/uncontrollable symptoms, chest pain, shortness of breath, to dial 911 or go to the nearest Emergency Room with a driver.
Asked patient if she is in agreement with the plan and if with any questions for RN or the physician .

Patient verbalized understanding and agrees with the plan.

Offered patient an appointment today or tomorrow.
Patient prefers an appointment in Tustin
Informed patient that appointment available in Tustin is in the morning at 11:10AM with Dr Lee or at 4:10PM with Dr Wang

Patient stated she prefers the 4:10PM.

Appointment scheduled per patient's request.
Asked patient if she has any questions or concerns.

Patient has no further questions at this time.
Patient expressed understanding of plan and appreciation of call.

Michelle E Tiu is a 45 year old female

Chief Complaint

Patient presents with

- COUGH
worse at night, x 2 weeks

HPI

Patient complaining of cough starting 2 weeks ago.
Her son got sick the week prior.
Tested negative for covid.
Patient has been tried on azithromycin and currently doxycycline, but hasn't noticed much of an improvement. CXR negative for pna.
Using albuterol, taking prednisone burst, benadryl, robitussin AC and flonase with minimal relief.
If anything prednisone works best.
Usually symptoms most prominent in evenings around 8p. Patient has trouble sleeping.
Denies associated shortness of breath, fever or chills.
She is getting landscaping done with grass and olive trees, but her door stays closed and she has HEPA filters throughout the home.

PHYSICAL EXAMINATION

BP 122/72 | Pulse 71 | Temp 97.3 °F (36.3 °C) (Temporal) | Wt 120 lb 5.9 oz (54.6 kg) | SpO2 97% | BMI 22.38 kg/m²
Estimated body mass index is 22.38 kg/m² as calculated from the following:
Height as of 11/8/21: 5' 1.5" (1.562 m).
Weight as of this encounter: 120 lb 5.9 oz (54.6 kg).

Physical Exam

Constitutional:

Appearance: Normal appearance.

HENT:

Clinical Notes (continued)

Head: Normocephalic and atraumatic.
Right Ear: Tympanic membrane normal.
Left Ear: Tympanic membrane normal.
Nose: Nose normal.
Mouth/Throat:
Mouth: Mucous membranes are moist.
Pharynx: Oropharynx is clear.

Eyes:

Extraocular Movements: Extraocular movements intact.
Conjunctiva/sclera: Conjunctivae normal.
Pupils: Pupils are equal, round, and reactive to light.

Cardiovascular:

Rate and Rhythm: Normal rate and regular rhythm.

Pulmonary:

Effort: Pulmonary effort is normal.

Neurological:

Mental Status: She is alert.

ASSESSMENT**1. POSTVIRAL COUGH**

PLAN

- likely postviral cough given history and exam
- will add combo inhaler twice daily
- change flonase to astelin spray twice daily
- additional 5 days of prednisone

***See patient AVS for instructions with changes made to the note for clarification of plan**

Follow up prn**Orders Placed This Encounter**

- Azelastine (ASTELIN) 137 mcg (0.1 %) Nasl Aero Spray
- Ciclesonide (ALVESCO) 80 mcg/actuation Inhl HFAA
- predniSONE (ORASONE) 20 mg Oral Tab

JOSHUA WANG DO**3/18/2022**

Patient Instructions

- take prednisone burst 20 mg am and 10 mg pm
- dual inhaler twice daily 1-2 puffs each time; rinse out mouth afterwards

Clinical Notes (continued)

- may change out flonase with astelin OR add astelin in addition to flonase
- may take a few weeks to settle down

Michelle E Tiu is a 45 year old female

Chief Complaint
Patient presents with
- GOALS OF CARE - ifobt, tobacco - COUGH

HPI

Patient here to follow up on persistent cough.
Patient complaining of cough starting 3 weeks ago.
Her son got sick the week prior.
Tested negative for covid.
CXR negative for pna.
Using albuterol, benadryl, robitussin AC and flonase with minimal relief.

03/28/2022 - Office Visit in FAMILY PRACTICE (continued)

Clinical Notes (continued)

Has been on 2 course of azithromycin and doxycycline. Has completed 2 courses of prednisone burst. Usually symptoms most prominent in evenings around 8p. Problem is more in upper airway, has tickle in her throat. Denies associated wheezing, shortness of breath, fever or chills. Biggest problem is still sleeping at night due to ongoing cough.

PHYSICAL EXAMINATION

BP 115/70 (BP Location: LA-LEFT ARM, BP Patient Position: SITTING, Cuff Size: Standard Adult) | Pulse 75 | Temp 97.4 °F (36.3 °C) (Temporal) | Resp 16 | Wt 117 lb 11.6 oz (53.4 kg) | LMP 03/05/2022 | SpO2 98% | Breastfeeding No | BMI 21.88 kg/m²
Estimated body mass index is 22.38 kg/m² as calculated from the following:
Height as of 11/8/21: 5' 1.5" (1.562 m).
Weight as of this encounter: 120 lb 5.9 oz (54.6 kg).

Physical ExamConstitutional:

Appearance: Normal appearance.

Your Kaiser Permanente Care Instructions

Bursitis of the Elbow: Care Instructions

Your Care Instructions

Bursitis is pain and swelling of the bursae. These are sacs of fluid that help your joints move smoothly. Olecranon bursitis is a type of bursitis that affects the back of the elbow. This is sometimes called Popeye elbow because the bump that develops looks like the cartoon character Popeye's elbow.

Injury, overuse, or prolonged pressure on your elbow can cause this form of bursitis. Sometimes it happens when people have arthritis. It also can occur for unknown reasons.

Treatment may include draining fluid from the bursa with a needle. If your doctor thought there was infection, he or she may have prescribed antibiotics. You also may get shots of medicine into the bursa to help the swelling go down. Your elbow should get better in a few days or weeks.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

How can you care for yourself at home?

- Take pain medicines exactly as directed.
 - If the doctor gave you a prescription medicine for pain, take it as prescribed.
 - If you are not taking a prescription pain medicine, ask your doctor if you can take an over-the-counter medicine.
 - Do not take two or more pain medicines at the same time unless the doctor told you to. Many pain medicines have acetaminophen, which is Tylenol. Too much acetaminophen (Tylenol) can be harmful.
- If your doctor prescribed antibiotics, take them as directed. Do not stop taking them just because you feel better. You need to take the full course of antibiotics.
- If your doctor gave you a sling, an elastic bandage, or a compression sleeve, wear it exactly as instructed.
- Put ice or a cold pack on your elbow for 10 to 20 minutes at a time. Try to do this every 1 to 2 hours for the next 3 days (when you are awake) or until the swelling goes down. Put a thin cloth between the ice

04/18/2022 - Allied Health/Nurse Visit in FAMILY PRACTICE ADULT NURSE CL (continued)

Patient Instructions (continued)

and your skin.

- After 3 days, you can try heat, or alternate heat and ice.
- Rest your elbow. Try to stop or reduce any activity that causes pain.
- Wear elbow pads during physical activity to prevent injury.
- Do not lean your elbows on tables or armrests.

When should you call for help?

Call your doctor now or seek immediate medical care if:

- You have new or worse symptoms of infection, such as:
 - Increased pain, swelling, warmth, or redness.
 - Red streaks leading from the area.
 - Pus draining from the area.
 - A fever.

Watch closely for changes in your health, and be sure to contact your doctor if:

- You do not get better as expected.

- Here are some examples of exercises for you to try. The exercises may be suggested for a condition or for rehabilitation. Start each exercise slowly. Ease off the exercises if you start to have pain.
- You will be told when to start these exercises and which ones will work best for you.
- **How to do the exercises**

04/18/2022 - Allied Health/Nurse Visit in FAMILY PRACTICE ADULT NURSE CL (continued)

Patient Instructions (continued)

• Wrist flexor stretch

- Extend your arm in front of you with your palm up.
- Bend your wrist, pointing your hand toward the floor.
- With your other hand, gently bend your wrist farther until you feel a mild to moderate stretch in your forearm.
- Hold for at least 15 to 30 seconds. Repeat 2 to 4 times.

© Healthwise, Incorporated

• Wrist extensor stretch

- Repeat steps 1 to 4 of the stretch above but begin with your extended hand palm down.

© Healthwise, Incorporated

• Ball or sock squeeze

- Hold a tennis ball (or a rolled-up sock) in your hand.
- Make a fist around the ball (or sock) and squeeze.
- Hold for about 6 seconds, and then relax for up to 10 seconds.
- Repeat 8 to 12 times.
- Switch the ball (or sock) to your other hand and do 8 to 12 times.

© Healthwise, Incorporated

• Wrist deviation

- Sit so that your arm is supported but your hand hangs off the edge of a flat surface, such as a table.
- Hold your hand out like you are shaking hands with someone.
- Move your hand up and down.
- Repeat this motion 8 to 12 times.
- Switch arms.
- Try to do this exercise twice with each

Patient Instructions (continued)

hand.

- **Wrist curls**

- Place your forearm on a table with your hand hanging over the edge of the table, palm up.
- Place a 1- to 2-pound weight in your hand. This may be a dumbbell, a can of food, or a filled water bottle.
- Slowly raise and lower the weight while keeping your forearm on the table and your palm facing up.
- Repeat this motion 8 to 12 times.
- Switch arms, and do steps 1 through 4.
- Repeat with your hand facing down toward the floor. Switch arms.

- **Biceps curls**

- Sit leaning forward with your legs slightly spread and your left hand on your left thigh.
- Place your right elbow on your right thigh, and hold the weight with your forearm horizontal.
- Slowly curl the weight up and toward your chest.
- Repeat this motion 8 to 12 times.
- Switch arms, and do steps 1 through 4.

- **Follow-up care is a key part of your treatment and safety.** Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

- **Where can you learn more?**

- Go to <https://kp.org/health>
- Enter **M279** in the search box to learn more about "**Elbow: Exercises.**"

Michelle E Tiu is a 45 year old female

Chief Complaint

Patient presents with

• ELBOW PAIN

Right elbow pain follow up

HPI

Ongoing right lateral elbow pain.
Has been using tennis elbow strap and taking nsaid w/o much improvement.
Having trouble using joystick at work and even pouring orange juice or washing dishes.
Associated swelling at elbow.
XR negative.
Of note, has history of giant cell tumor of left ankle.

PHYSICAL EXAMINATION

BP 110/70 (BP Location: LA-LEFT ARM, BP Patient Position: SITTING, Cuff Size: Standard Adult) | Pulse 68 | Temp 97.8 °F (36.6 °C) (Temporal) | Ht 5' 1.5" (1.562 m) | Wt 120 lb 2.4 oz (54.5 kg) | BMI 22.33 kg/m²

Estimated body mass index is 22.33 kg/m² as calculated from the following:

Height as of this encounter: 5' 1.5" (1.562 m).

Weight as of this encounter: 120 lb 2.4 oz (54.5 kg).

Physical ExamConstitutional:

General: She is not in acute distress.

Appearance: Normal appearance. She is not ill-appearing.

Cardiovascular:

Rate and Rhythm: Normal rate and regular rhythm.

Pulmonary:

Effort: Pulmonary effort is normal.

Breath sounds: Normal breath sounds.

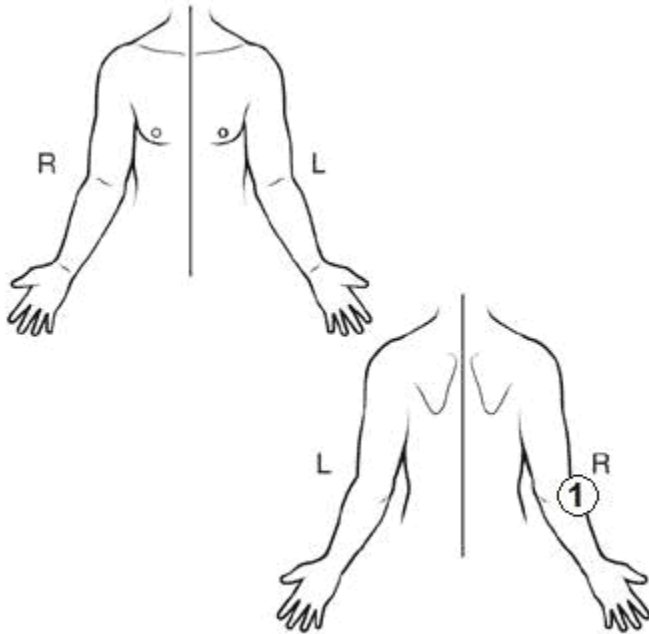

Musculoskeletal:

Right elbow: **Swelling** present. **Tenderness** present in **lateral epicondyle**.

Arms:

04/25/2022 - Office Visit in FAMILY PRACTICE (continued)

Clinical Notes (continued)

1: Localized swelling and tenderness to palpation over right lateral epicondyle

Neurological:

Mental Status: She is alert.

ASSESSMENT

1. RIGHT LATERAL EPICONDYLITIS

PLAN

- tennis elbow not improving with conservative therapy
- patient desires cortisone injection: performed w/o complications
- continue tennis elbow brace
- will refer to Orthopedics for follow up

***See patient AVS for instructions with changes made to the note for clarification of plan**

Follow up as above

Michelle E Tiu is a 45 year old female
Left hand dominant optometrist at Tustin Ranch

Right lateral elbow pain
3 months, noticed "bump"
Pain radiating for forearm
Recently started getting pain in shoulder with numbness into ring and small finger
Got cortisone injection 3 days ago. Mild improvement

Prior bilateral shoulder rotator cuff with pain
Also prior history of PVNS in ankle

- Patient Active Problem List:
- TENDINITIS OF RIGHT SHOULDER
 - CERVICAL MYOFASCIAL PAIN SYNDROME
 - IUD SURVEILLANCE
 - FHX OF BREAST CANCER
 - FHX OF OVARIAN CANCER
 - IMPINGEMENT SYNDROME OF LEFT SHOULDER

No outpatient medications have been marked as taking for the 4/28/22 encounter (Orthopedic Office Visit) with Kono, Michiyuki (M.D.), M.D..

Allergies:

Allergies	
Allergen	Reactions
• Vicodin [Acetaminophen-Hydrocodone]	Nausea and/or Vomiting

Exam
Right arm:
No swelling, synovitis, or inflammation
Full range of motion
Tenderness over lateral epicondyle with palpable spurring
Minimal pain with resisted wrist ext and grip, subjectively improved compared to before injection
Obvious subluxation of ulnar nerve with radiating symptoms into ring and small finger

A: right lateral epicondylitis
Right elbow cubital tunnel syndrome secondary to subluxing ulnar nerve
Compensatory shoulder pain

P; Reviewed findings and discussed options
Recent injection 3 days ago with improvement

Self Triage Skin Conditions Group Dt Scal

Last updated: 6/6/2022 7:14 AM PDT
Which of the following skin conditions is your reason for visit?

Skin Rash

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Do you have any of the following symptoms?

Feeling faint or very ill

Swelling of the mouth, tongue, or throat

Trouble breathing, shortness of breath, or wheezing

Fever greater than 100.5 degrees

Severe, shaking chills

None of the above

Yes

Indicate which of the following describes your rash?

Blisters in multiple parts of my body or spreading

New onset of joint pain that developed along with the rash

Rash on your face that is associated with pain or discharge in your eye

Discharge that is thick, bloody or colored

06/06/2022 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

—
None of the above

Yes

Do you just need a refill for a medication that has helped in the past for the same rash condition?

No

Have you been exposed to any of the following conditions around the time this rash began?

Chicken pox

—

Impetigo

—

Measles

—

Ringworm

—

Scabies

—

Sexually Transmitted Disease

—

Shingles

—

Staph Infection/MRSA

—

Strep Throat

—

Someone else's skin rash not listed above

—

None of the above

Yes

Is your skin condition a result of a laceration, cut or recent surgery?

No

Is your rash work related?

No

Where is your rash located?

All over

Yes

Is your rash:

Severe

Does your rash come and go within a day and/or changes location everyday?

No

How long ago did this rash begin?

Days (< 7 days)

How many day(s) have you had your rash?

2

This E-visit requires that you attach a focused and well-lit photo of your rash. Are you able to attach a photo of the rash?

Yes

E-Visit Treatment Response (:::)

Dear Michelle E Tiu

After review of your submitted photo and E-Visit responses, we are recommending treatment with an oral antibiotic. You can pick up the prescription at any Kaiser Permanente pharmacy or at the outside pharmacy you requested.

I also advise that you purchase Hibiclens® or another chlorhexidine solution and scrub your entire body (neck down) 3 times a week for the next 6-8 weeks. This will help prevent this type of infection from re-occurring.

Follow up with your primary care provider if your condition is not improving after two weeks of the above treatment or sooner if it gets worse.

Please review further guidelines for care below.

Thank You,

VICTORIA ZABAT SWARTZ NP

Folliculitis: Care Instructions

Folliculitis (say "fuh-LIK-yuh-LY-tus") is an infection of the pouches (follicles) in the skin where hair grows. It can occur on any part of the body, but it is most common on the scalp, face, armpits or groin. Bacteria, such as those found in a hot tub, can cause folliculitis.

Folliculitis begins as a red, tender area near a strand of hair. The skin can itch or burn and may drain pus or blood. Sometimes folliculitis can lead to more serious skin infections.

Your doctor usually can treat mild folliculitis with an antibiotic cream or ointment. If you have folliculitis on your scalp, you may use a shampoo that kills bacteria. Antibiotics you take as pills can treat infections deeper in the skin.

How can you care for yourself at home?

- Use a soap that kills bacteria to wash the infected area. If your scalp or beard is infected, use a shampoo with selenium or propylene glycol. Be careful. Do not scrub too long or too hard. Use antibacterial versions of soaps such as Cetaphil® cleanser or Lever 2000® and alternate with OTC benzoyl peroxide 5% liquid wash or PanOxyl® bar soap to prevent recurrences.
- Mix 1 1/3 cup warm water and 1 tablespoon vinegar. Soak a cloth in the mixture and place it over the infected skin until it cools off (usually 5 to 10 minutes). You can do this 3 to 6 times a day.
- Do not share your razor, towel, or washcloth. That can spread folliculitis.

06/06/2022 - E-Visit in FAMILY MED KP CARE NOW (continued)

Messages (continued)

- Use a new blade in your razor each time you shave to keep from re-infecting your skin.
- If you tend to get folliculitis, avoid using hot tubs. They can contain bacteria that cause folliculitis.

When should you call for help?

Call your doctor now or seek immediate medical care if you have symptoms of worsening infection, such as:

- Increased pain, swelling, warmth, or redness
- Red streaks leading from the area.
- Pus draining from the area.
- A fever

Self Triage Rash Dt Scal

Last updated: 6/6/2022 11:12 AM PDT

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Do you have any of the following symptoms?

Feeling faint or very ill

Swelling of the mouth, tongue, or throat

Trouble breathing, shortness of breath, or wheezing

Fever greater than 100.5 degrees

Severe, shaking chills

None of the above

Yes

06/06/2022 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

Indicate which of the following describes your rash?

Blisters in multiple parts of my body or spreading

—

New onset of joint pain that developed along with the rash

—

Rash on your face that is associated with pain or discharge in your eye

—

Discharge that is thick, bloody or colored

—

None of the above

Yes

Do you just need a refill for a medication that has helped in the past for the same rash condition?

No

Have you been exposed to any of the following conditions around the time this rash began?

Chicken pox

—

Impetigo

—

Measles

—

Ringworm

—

Scabies

—

Sexually Transmitted Disease

—

Shingles

—

Staph Infection/MRSA

—

Strep Throat

—

Someone else's skin rash not listed above

—

None of the above

Yes

Is your skin condition a result of a laceration, cut or recent surgery?

No

Is your rash work related?

No

Where is your rash located?

All over

Yes

Is your rash:

Severe

Does your rash come and go within a day and/or changes location everyday?

No

How long ago did this rash begin?

Days (< 7 days)

How many day(s) have you had your rash?

2

This E-visit requires that you attach a focused and well-lit photo of your rash. Are you able to attach a photo of the rash?

Yes

Take a photo 6 inches away from the rash.:

FOLLICULITIS [L73.9 (ICD-10-CM)]

Patient Instructions

Your doctor recommends that all adults plan for life's “what ifs” and identify their future health care choices in an Advance Health Care Directive. An Advance Health Care Directive (also known as a Living Will) is a form where you can write down your values and choose a health care decision maker.

We have **Life Care Planning** services that will help you reflect upon your values and beliefs so you may write down your future health care decisions in an Advance Health Care Directive. This type of planning can also help prepare your health care decision maker to honor your wishes.

You can begin your Life Care Planning by following these steps:

1. Call your local Center for Healthy Living department to sign up for a **Life Care Planning workshop** or you can now register for a Life Care Planning Workshop online! Sign in to or register with KP.org, go to Appointment Center, schedule an appointment, Select “Health Education Programs”, then Life Care Planning.
2. Go to kp.org/lifecareplan to view videos and complete and print an interactive Advance Health Care Directive. Be sure to talk with your health care decision maker about your treatment preferences.
3. Your health care team wants to know your wishes. Once completed, have your Advance Directive notarized **or** have two witnesses sign it.
 - **Email a copy to:** scalcentralized-scanning-center@kp.org **OR**
 - **Mail a copy to:** Kaiser Permanente, Central Scanning Center, 1011 S. East Street, Anaheim, CA 92805. If you already have an Advance Health Care Directive or completed one as part of a living trust , please **email or send in a copy** to the address above.
4. We recommend you review your Advance Health Care Directive often to make sure it reflects your

06/06/2022 - Office Visit in FAMILY PRACTICE (continued)

Patient Instructions (continued)

current values and wishes. Visit kp.org/lifecareplan or attend a workshop to help you and your health care decision maker think and talk about what you would want as your life changes.

5. Talk with your loved ones so they understand your wishes and can follow them.

These are important decisions to make. Life Care Planning is a gift you can give yourself and your family. We encourage you to start your planning today!

07/11/2022 - Office Visit in OPTOMETRY (continued)

Clinical Notes (continued)

Oasys 1 Day, Vistakon					
-----------------------------	--	--	--	--	--

Expiration Date: 11/5/2023

Replacement: Single Use

Wearing Schedule: Daily wear

Edited by: Kim, Rachel (O.D.), O.D.

ASSESSMENT/PLAN:

1) Myopia OU, Astigmatism OU, Presbyopia

- Spectacles Rx updated/released
- Limited trial lenses available in-stock for pt dispense
- Trial lenses ordered for monovision modality (OD distance/full astigmatism correction, OS near)
- Pt to pick-up trials upon arrival
- Follow-up with CRET after pt trials two different options: 1) full distance/cyl OD and -1.75 DS OS (near/+0.50 effective add), 2) full distance/cyl OD and -1.50 DS OS (near/+0.75 effective add)

Pt was advised to return to the clinic or go to urgent care if there's any redness, eye pain, decreased vision or any changes

RTC: Pick-up ordered trials upon arrival; CRET following to finalize monovision Rx

See diagnosis and orders, if applicable. All questions were answered. Results discussed with patient. Pt states understand and agrees with plan.

Order comments: NASAL SWAB: Instruct Patient to self-collect or Parent/Guardian/Caregiver to help with specimen collection from ANTERIOR NARES. If not possible, following instructions below: NASAL SWAB: Observe Enhanced Droplet Precautions. Use the same swab for both oropharyngeal and nasopharyngeal sites: (1) swab back of throat, avoiding tongue, and then (2) place same swab into a nostril parallel to palate for a few seconds to absorb secretions; place swab into a sterile container with viral transport media. Store/transport refrigerated or on ice.

SARS-COV-2 (COVID-19), QUALITATIVE, NAA	Not Detected	Not Detected	—	SCPMG

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as RT-PCR or TMA).

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SARS-CoV-2 RNA present.

Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management.

Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated.

Inconclusive

. Not all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

COVID-19 Test Guidance for Isolation by Scal E-Visit, Provider (M.D.), M.D. on 9/9/2022

Status: Sent
Letter body:

9/9/2022

Name: Michelle E Tiu
Address: 112 Lustro
Irvine CA 92602-1900

Re: Michelle E Tiu

To Whom It May Concern:

Based upon recommendations from the California Department of Public Health (CDPH), **Michelle should self-isolate** until COVID-19 diagnostic testing can be performed and results returned.

If the follow-up diagnostic test is positive, self-isolation should continue based upon recommendations from CDPH (see link below).

If Michelle has or had COVID-19 symptoms, self-isolation should continue until:

- It has been at least 5 days since symptoms started,
 - There are no fevers,
 - Other symptoms have improved,
- AND**
- A negative diagnostic test was collected 5 days or more after symptoms began.
 - If fevers persist, isolation should continue until fevers resolve.

09/09/2022 - Orders Only in SCAL OC E-VISITS ADMIN DEPT (continued)

Letters (continued)

- If other symptoms are not resolving, isolation should continue until symptoms are resolving or until after day 10 since the symptoms started.
- Alternatively, if retesting on or after day 5 does not occur, Michelle may end isolation after day 10 (since symptoms started), provided there are no fevers and other symptoms are improving.

If Michelle never had COVID-19 symptoms, self-isolation should continue until:

- It has been at least 5 days since Michelle first tested positive,
AND
- A negative diagnostic test was collected 5 days or more since Michelle first tested positive.
- Alternatively, if retesting on or after day 5 does not occur, Michelle may end isolation on day 10 (since the initial positive result).

After day 10, a negative COVID-19 antigen or PCR test result is NOT required for discontinuing self-isolation, based upon recommendations from CDPH.

Healthcare workers should contact their employers for further guidance as the isolation requirements may differ from above.

NOTE: This document may be printed and shared with your employer or school. You do not need to contact your doctor for an off-work, off-school or caregiver note.

Detailed recommendations are available at

<https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/COVID-19/Guidance-on-Isolation-and-Quarantine-for-COVID-19-Contact-Tracing.aspx>

Sincerely,
Kaiser Permanente

Visit Information

Self Triage Covid-19 Group Dt Scal

Last updated: 9/9/2022 2:07 PM PDT

Which of the following COVID-19 concerns is your reason for visit?

COVID-19 Symptoms & Testing, Cold, Cough, Sore Throat

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Are you pregnant or possibly pregnant?

No

Have you had a baby in the past 6 weeks?

No

Do you have any of the following conditions?

No, I do not have any of the above conditions.

We provide a detailed clinical evaluation via this E-visit with a series of questions to direct you to the appropriate care based on

09/09/2022 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

your careful answers.

I do not feel too sick and do not have the above condition and would like to be tested.

Do you currently have any COVID-19 symptoms?

Yes

When did you start having these symptoms?

9/8/2022

Have you had A POSITIVE COVID-19 test in the past 2 months?

No

I have reviewed and understand the instructions above. Please select from one of the following options:

My symptoms are manageable. I would like to take the test for COVID-19 infection.

Which method would you prefer?

Swab – Go to KP Facility for Swab Test

Selftriage Selfcare Cold_Flu Na Adult Regn_Ga Peq_Scal

Your Care Plan KAISER PERMANENTE®

Common Cold, COVID-19, and Flu are contagious respiratory illnesses caused by different viruses.

Colds: infection with rhinovirus and many other viruses

- Symptoms include sore throat, runny nose, coughing, sneezing, headaches, and body aches.

COVID-19: infection with coronavirus (SARS-CoV-2)

- COVID-19 can cause more severe illness in some people than the flu and it may take longer for them to develop symptoms or to get better. Patients with COVID-19 may also be contagious for a longer time than those with the flu.

Flu: infection with seasonal flu virus

- Seasonal influenza is a respiratory illness that can affect the nose, throat, and lungs. Flu viruses spread when infected people cough, sneeze or talk. The illness can vary from mild to severe.

Home Care for viruses

Note: As with any over the counter (OTC) medication, carefully read the label to make sure this medication is right for you and follow all of the instructions.

- Get plenty of rest
- Drink more fluids such as water, Pedialyte or Gatorade
- If you have fluid restrictions for health reasons, discuss this with your healthcare team
- **Fever, muscle aches, headache:** Take over the counter (OTC) pain medicine such as acetaminophen (Tylenol), ibuprofen (Advil, Motrin), or naproxen (Aleve) as directed. Do not use ibuprofen or naproxen if you have a history of stomach ulcers or kidney disease.
- **Cough:** OTC cough syrup such as Robitussin or cough drops (sugar free for diabetics), try an extra pillow at night to elevate your head for cough due to postnasal drip, use a humidifier in bedroom
- **Nasal/Sinus congestion:** Use nasal saline rinses and anti-inflammatory nose sprays: fluticasone (Flonase), triamcinolone (Nasacort), or try oral decongestants such phenylephrine (Sudafed) or Pseudoephedrine (ask pharmacist to purchase it behind the pharmacy counter). Do not use decongestants if you have high blood pressure
- **Sore throat:** Keep throat moist, drink warm tea or soup, suck on herbal lozenges or use OTC throat sprays, eat soft foods, or try salt gargles by mixing one cup warm water and 1-2 tsp of salt

Note: If you have sore throat with fever that is not getting better with self-care, there is a small possibility that your symptoms may be from strep infection. You should discuss your symptoms with your health care team.

- **Sore nose/dry lips:** Apply petroleum jelly (Vaseline or Aquaphor)
- **Pregnant/ Nursing:** You may use Delsym 12 hour, Robitussin DM, Mucinex DM, Tylenol, Nasal Saline spray and Flonase to help with your symptoms. Do not use ibuprofen (Advil, Motrin), naproxen (Aleve), Sudafed

09/09/2022 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)**Visit Information (continued)**

(phenylephrine or Pseudoephedrine), or Afrin. If you need further guidance, consult your pharmacist or healthcare team.

- Continue taking your prescribed medicine exactly as directed
- Do not smoke since it will worsen flu symptoms

When to seek emergency medical help

- Trouble breathing
- Pale, blue lips or nail beds
- Persistent pain or pressure in chest
- Temp 103.0 F or more
- Inability to stay awake
- New confusion or disorientation
- Feeling faint, lightheaded, or weak

Available Prescription Treatments

Note: Most **healthy people** with the Common Cold, COVID-19 and Flu will get better with home care and rest and may not benefit from antiviral medications.

- **Common Cold:** There is no cure or antiviral medication available for colds, and many patients will feel better with home care, fluids, rest, and over the counter medication.
- **COVID-19:** Antiviral medications such as Paxlovid are recommended for some **high-risk patients** and should be started as soon as possible up to 5 days after symptoms start.
- **Flu:** Antiviral medications such as Tamiflu are recommended for **high-risk patients** and should be started as soon as possible up to 5 days after symptoms start.

Controlling Spread of Infection

- Wash hands or use alcohol-based hand sanitizers
- Cover your cough and sneezes
- Avoid crowded places
- Move indoor activity outdoors, improve ventilation in the home by opening windows and circulating air with fans, replace air filters to ensure they are properly fitted. Update new filters with a higher filtration if able.
- Keep vaccinations up to date

When to end isolation for COVID-19:

Covid 19 CDPH recommendation link: <https://covid19.ca.gov/quarantine-and-isolation/#calculate-your-isolation>

Common Cold and Flu: If you test negative for Covid-19, you may end your isolation after your symptoms have improved and it has been 24 hours since your fever has resolved without the use of fever reducing medications.

Other Health Care Recommendation for you

VACCINE INFORMATION FACT SHEET FOR RECIPIENTS AND CAREGIVERS
ABOUT COMIRNATY (COVID-19 VACCINE, mRNA), THE PFIZER-BIONTECH
COVID-19 VACCINE, AND THE PFIZER-BIONTECH COVID-19 VACCINE,
BIVALENT (ORIGINAL AND OMICRON BA.4/BA.5) TO PREVENT CORONAVIRUS
DISEASE 2019 (COVID-19) FOR USE IN INDIVIDUALS 12 YEARS OF AGE AND
OLDER

FOR 12 YEARS OF AGE AND OLDER

You are being offered either COMIRNATY (COVID-19 Vaccine, mRNA), the Pfizer-BioNTech COVID-19 Vaccine, or the Pfizer-BioNTech COVID-19 Vaccine, Bivalent (Original and Omicron BA.4/BA.5), hereafter referred to as the Pfizer-BioNTech COVID-19 Vaccine, Bivalent, to prevent Coronavirus Disease 2019 (COVID-19) caused by SARS-CoV-2.

This Vaccine Information Fact Sheet for Recipients and Caregivers comprises the Fact Sheet for the authorized Pfizer-BioNTech COVID-19 Vaccine and the Pfizer-BioNTech COVID-19 Vaccine, Bivalent, and also includes information about the U.S. Food and Drug Administration (FDA)-licensed vaccine, COMIRNATY (COVID-19 Vaccine, mRNA) for use in individuals 12 years of age and older [1].

The FDA-approved COMIRNATY (COVID-19 Vaccine, mRNA) and the Pfizer-BioNTech COVID-19 Vaccine authorized under Emergency Use Authorization (EUA) for individuals 12 years of age and older, when prepared according to their respective instructions for use, can be used interchangeably.[2]

COMIRNATY (COVID-19 Vaccine, mRNA) is an FDA-approved COVID-19 vaccine made by Pfizer for BioNTech. It is approved as a 2-dose series for prevention of COVID-19 in individuals 12 years of age and older. It is also authorized under EUA to provide:

- a third primary series dose to individuals 12 years of age and older with certain kinds of immunocompromise

The Pfizer-BioNTech COVID-19 Vaccine has received EUA from the FDA to provide:

- a 2-dose primary series to individuals 12 years of age and older; and
- a third primary series dose to individuals 12 years of age and older with certain kinds of immunocompromise.

The Pfizer-BioNTech COVID-19 Vaccine, Bivalent has received EUA from FDA to provide either:

- a single booster dose to individuals 12 years of age and older at least 2 months after completion of primary vaccination with any authorized or approved monovalent³ COVID-19 vaccine; or
- a single booster dose to individuals 12 years of age and older at least 2 months after receipt of the most recent booster dose with any authorized or approved monovalent COVID-19 vaccine.

¹ You may receive this Vaccine Information Fact Sheet even if your child is 11 years old. Children who will turn from 11 years to 12 years of age between doses in the primary regimen may receive, for any dose in the primary regimen, either: (1) the Pfizer-BioNTech COVID-19 Vaccine authorized for use in individuals 5 through 11 years of age; or (2) COMIRNATY (COVID-19 Vaccine, mRNA) or the PfizerBioNTech COVID-19 Vaccine authorized for use in individuals 12 years of age and older.

² When prepared according to their respective instructions for use, the FDA-approved COMIRNATY (COVID-19 Vaccine, mRNA) and the EUA-authorized Pfizer-BioNTech COVID-19 Vaccine for individuals 12 years of age and older can be used interchangeably without presenting any safety or effectiveness concerns.

Patient Instructions (continued)

COMIRNATY (COVID-19 Vaccine, mRNA), the Pfizer-BioNTech COVID-19 Vaccine, and the Pfizer-BioNTech COVID-19 Vaccine, Bivalent, which you may receive because there is currently a pandemic of COVID-19. Talk to your vaccination provider if you have questions.

This Fact Sheet may have been updated. For the most recent Fact Sheet, please see www.cvdvaccine.com.

WHAT YOU NEED TO KNOW BEFORE YOU GET ANY OF THESE VACCINES**WHAT IS COVID-19?**

COVID-19 disease is caused by a coronavirus called SARS-CoV-2. You can get COVID-19 through contact with another person who has the virus. It is predominantly a respiratory illness that can affect other organs. People with COVID-19 have had a wide range of symptoms reported, ranging from mild symptoms to severe illness leading to death. Symptoms may appear 2 to 14 days after exposure to the virus. Symptoms may include: fever or chills; cough; shortness of breath; fatigue; muscle or body aches; headache; new loss of taste or smell; sore throat; congestion or runny nose; nausea or vomiting; diarrhea.

HOW ARE COMIRNATY (COVID-19 VACCINE, mRNA), THE PFIZER-BIONTECH COVID-19 VACCINE, AND THE PFIZER-BIONTECH COVID-19 VACCINE, BIVALENT RELATED?

COMIRNATY (COVID-19 Vaccine, mRNA) and the Pfizer-BioNTech COVID-19 Vaccine, when prepared according to their respective instructions for use, can be used interchangeably. The Pfizer-BioNTech COVID-19 Vaccine, Bivalent is made in the same way as COMIRNATY and Pfizer-BioNTech COVID-19 Vaccine but it also contains an Omicron component to help prevent COVID-19 caused by the Omicron variant of SARS-CoV-2.

3 Monovalent refers to any authorized or approved COVID-19 vaccine that contains or encodes the spike protein of only the Original SARS-CoV-2

For more information on EUA, see the “**What is an Emergency Use Authorization (EUA)?**” section at the end of this Fact Sheet.

WHAT SHOULD YOU MENTION TO YOUR VACCINATION PROVIDER BEFORE YOU GET ANY OF THESE VACCINES?

Tell the vaccination provider about all of your medical conditions, including if you:

- have any allergies
- have had myocarditis (inflammation of the heart muscle) or pericarditis (inflammation of the lining outside the heart)
- have a fever
- have a bleeding disorder or are on a blood thinner
- are immunocompromised or are on a medicine that affects your immune system
- are pregnant or plan to become pregnant
- are breastfeeding
- have received another COVID-19 vaccine
- have ever fainted in association with an injection

HOW ARE THESE VACCINES GIVEN?

The Pfizer-BioNTech COVID-19 Vaccine, the Pfizer-BioNTech COVID-19 Vaccine, Bivalent, or COMIRNATY (COVID-19 Vaccine, mRNA) will be given to you as an injection into the muscle.

Primary Series: The Pfizer-BioNTech COVID-19 Vaccine and COMIRNATY (COVID-19 Vaccine, mRNA) are given for the primary series. The vaccine is administered as a 2-dose series, 3 weeks apart. A third primary series dose may be administered at least 4 weeks after the second dose to individuals with certain kinds of immunocompromise.

Booster Dose: Pfizer-BioNTech COVID-19 Vaccine, Bivalent is administered as a single booster dose at least 2 months after:

- completion of primary vaccination with any authorized or approved monovalent COVID-19 vaccine; or

Patient Instructions (continued)

- receipt of the most recent booster dose with any authorized or approved monovalent COVID-19 vaccine

The vaccine may not protect everyone.

WHO SHOULD NOT GET COMIRNATY (COVID-19 VACCINE, mRNA), THE PFIZER-BIONTECH COVID-19 VACCINE, OR THE PFIZER-BIONTECH COVID-19 VACCINE, BIVALENT?

You should not get any of these vaccines if you:

- had a severe allergic reaction after a previous dose of COMIRNATY (COVID-19 Vaccine, mRNA) or the Pfizer-BioNTech COVID-19 Vaccine
- had a severe allergic reaction to any ingredient in these vaccines.

WHAT ARE THE INGREDIENTS IN THESE VACCINES?

COMIRNATY (COVID-19 Vaccine, mRNA), Pfizer-BioNTech COVID-19 Vaccine, and Pfizer-BioNTech COVID-19 Vaccine, Bivalent include the following ingredients:

- mRNA and lipids ((4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate), 2 [(polyethylene glycol)-2000]-N,N-ditetradecylacetamide, 1,2-Distearoyl-sn-glycero-3-phosphocholine, and cholesterol).

Pfizer-BioNTech COVID-19 vaccines for individuals 12 years of age and older contain 1 of the following sets of additional ingredients; ask the vaccination provider which version is being administered:

- potassium chloride, monobasic potassium phosphate, sodium chloride, dibasic sodium phosphate dihydrate, and sucrose

OR

- tromethamine, tromethamine hydrochloride, and sucrose

Pfizer-BioNTech COVID-19 Vaccine, Bivalent for individuals 12 years of age and older contains the following additional ingredients:

- tromethamine, tromethamine hydrochloride, and sucrose

COMIRNATY (COVID-19 Vaccine, mRNA) contains 1 of the following sets of additional ingredients; ask the vaccination provider which version is being administered:

- potassium chloride, monobasic potassium phosphate, sodium chloride, dibasic sodium phosphate dihydrate, and sucrose

OR

- tromethamine, tromethamine hydrochloride, and sucrose

HAS THESE VACCINES BEEN USED BEFORE?

In clinical trials, approximately 23,000 individuals 12 years of age and older have received at least 1 dose of Pfizer-BioNTech COVID-19 Vaccine. Millions of individuals have received the Pfizer-BioNTech COVID-19 Vaccine under EUA since December 11, 2020.

In a clinical trial, approximately 300 individuals greater than 55 years of age received one dose of a bivalent vaccine that differs from the Pfizer-BioNTech COVID-19 Vaccine, Bivalent in that it contains a different Omicron component.

WHAT ARE THE BENEFITS OF THESE VACCINES?

COMIRNATY (COVID-19 Vaccine, mRNA) and the Pfizer-BioNTech COVID-19 Vaccine have been shown to prevent COVID-19. FDA has authorized Pfizer-BioNTech COVID-19 Vaccine, Bivalent to provide better protection against COVID-19 caused by the Omicron variant of SARS-CoV-2.

The duration of protection against COVID-19 is currently unknown.

Patient Instructions (continued)

WHAT ARE THE RISKS OF THESE VACCINES?

There is a remote chance that the Vaccine could cause a severe allergic reaction. A severe allergic reaction would usually occur within a few minutes to one hour after getting a dose of the vaccine. For this reason, your vaccination provider may ask you to stay at the place where you received your vaccine for monitoring after vaccination. Signs of a severe allergic reaction can include:

- Difficulty breathing
- Swelling of your face and throat
- A fast heartbeat
- A bad rash all over your body
- Dizziness and weakness

Myocarditis (inflammation of the heart muscle) and pericarditis (inflammation of the lining outside the heart) have occurred in some people who have received COMIRNATY (COVID-19 Vaccine, mRNA) or Pfizer-BioNTech COVID-19 Vaccine, more commonly in males under 40 years of age than among females and older males. In most of these people, symptoms began within a few days following receipt of the second dose of vaccine. The chance of having this occur is very low. You should seek medical attention right away if you have any of the following symptoms after receiving the vaccine:

- Chest pain
- Shortness of breath
- Feelings of having a fast-beating, fluttering, or pounding heart.

Side effects that have been reported with the vaccine include:

- Severe allergic reactions
- Non-severe allergic reactions such as rash, itching, hives, or swelling of the face
- Myocarditis (inflammation of the heart muscle)
- Pericarditis (inflammation of the lining outside the heart)
- Injection site pain
- Tiredness
- Headache
- Muscle pain
- Chills
- Joint pain
- Fever
- Injection site swelling
- Injection site redness
- Nausea
- Feeling unwell
- Swollen lymph nodes (lymphadenopathy)
- Decreased appetite
- Diarrhea
- Vomiting
- Arm pain
- Fainting in association with injection of the vaccine

These may not be all the possible side effects of these vaccines. Serious and unexpected side effects may occur. The possible side effects of these vaccines are still being studied in clinical trials.

WHAT SHOULD I DO ABOUT SIDE EFFECTS?

If you experience a severe allergic reaction, call 9-1-1, or go to the nearest hospital.

Call the vaccination provider or your healthcare provider if you have any side effects that bother you or do not go away.

Report vaccine side effects to **FDA/CDC Vaccine Adverse Event Reporting System (VAERS)**. The VAERS toll-free

Patient Instructions (continued)

number is 1-800-822-7967 or report online to <https://vaers.hhs.gov/reportevent.html>. Please include either "COMIRNATY (COVID-19 Vaccine, mRNA)", "Pfizer-BioNTech COVID-19 Vaccine EUA", or "Pfizer-BioNTech COVID-19 Vaccine, Bivalent EUA" as appropriate, in the first line of box #18 of the report form

In addition, you can report side effects to Pfizer Inc. at the contact information provided below.

Website	Fax number	Telephone number
www.pfizersafetyreporting.com	1-866-635-8337	1-800-438-1985

You may also be given an option to enroll in v-safe. V-safe is a new voluntary smartphone-based tool that uses text messaging and web surveys to check in with people who have been vaccinated to identify potential side effects after COVID-19 vaccination. V-safe asks questions that help CDC monitor the safety of COVID-19 vaccines. V-safe also provides second-dose reminders if needed and live telephone follow-up by CDC if participants report a significant health impact following COVID-19 vaccination. For more information on how to sign up, visit: www.cdc.gov/vsafe.

WHAT IF I DECIDE NOT TO GET COMIRNATY (COVID-19 VACCINE, mRNA), THE PFIZER-BIONTECH COVID-19 VACCINE, OR THE PFIZER-BIONTECH COVID-19 VACCINE, BIVALENT?

Under the EUA, it is your choice to receive or not receive the vaccine. Should you decide not to receive it, it will not change your standard medical care.

ARE OTHER CHOICES AVAILABLE FOR PREVENTING COVID-19 BESIDES COMIRNATY (COVID-19 VACCINE, mRNA), THE PFIZER-BIONTECH COVID-19 VACCINE, OR THE PFIZER-BIONTECH COVID-19 VACCINE, BIVALENT?

For primary vaccination, another choice for preventing COVID-19 is SPIKEVAX (COVID-19 Vaccine, mRNA), an FDA-approved COVID-19 vaccine. Other vaccines to prevent COVID-19 may be available under EUA, including bivalent vaccines that contain an Omicron component of SARS-CoV-2.

CAN I RECEIVE COMIRNATY (COVID-19 VACCINE, mRNA), PFIZER-BIONTECH COVID-19 VACCINE, OR THE PFIZER-BIONTECH COVID-19 VACCINE, BIVALENT AT THE SAME TIME AS OTHER VACCINES?

Data have not yet been submitted to FDA on administration of COMIRNATY (COVID-19 Vaccine, mRNA), the Pfizer-BioNTech COVID-19 Vaccine, or the Pfizer-BioNTech COVID-19 Vaccine, Bivalent at the same time with other vaccines. If you are considering receiving COMIRNATY (COVID-19 Vaccine, mRNA), the Pfizer-BioNTech COVID-19 Vaccine, or the Pfizer-BioNTech COVID-19 Vaccine, Bivalent with other vaccines, discuss your options with your healthcare provider.

WHAT IF I AM IMMUNOCOMPROMISED?

If you are immunocompromised, you may receive a third primary series dose of Pfizer-BioNTech COVID-19 Vaccine or COMIRNATY (COVID-19 Vaccine, mRNA). Individuals 12 years of age and older may receive a booster dose with Pfizer-BioNTech COVID-19 Vaccine, Bivalent. Vaccinations may not provide full immunity to COVID-19 in people who are immunocompromised, and you should continue to maintain physical precautions to help prevent COVID-19. Your close contacts should be vaccinated as appropriate.

WHAT IF I AM PREGNANT OR BREASTFEEDING?

If you are pregnant or breastfeeding, discuss your options with your healthcare provider.

WILL THESE VACCINES GIVE ME COVID-19?

No. The vaccine does not contain SARS-CoV-2 and cannot give you COVID-19.

KEEP YOUR VACCINATION CARD

When you get your first dose, you will get a vaccination card to show you when to return for your next dose(s) of the vaccine. Remember to bring your card when you return.

ADDITIONAL INFORMATION

If you have questions, visit the website or call the telephone number provided below.

Patient Instructions (continued)

To access the most recent Fact Sheets, please scan the QR code provided below.

Global website
www.cvdvaccine.com

Telephone number
1-877-829-2619
(1-877-VAX-CO19)

HOW CAN I LEARN MORE?

- Ask the vaccination provider.
- Visit CDC at <https://www.cdc.gov/coronavirus/2019-ncov/index.html>.
- Visit FDA at <https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization>.
- Contact your local or state public health department.

WHERE WILL MY VACCINATION INFORMATION BE RECORDED?

The vaccination provider may include your vaccination information in your state/local jurisdiction's Immunization Information System (IIS) or other designated system. This will ensure that you receive the same vaccine when you return for the second dose. For more information about IISs visit:

<https://www.cdc.gov/vaccines/programs/iis/about.html>.

CAN I BE CHARGED AN ADMINISTRATION FEE FOR RECEIPT OF THE COVID-19 VACCINE?

No. At this time, the provider cannot charge you for a vaccine dose and you cannot be charged an out-of-pocket vaccine administration fee or any other fee if only receiving a COVID-19 vaccination. However, vaccination providers may seek appropriate reimbursement from a program or plan that covers COVID-19 vaccine administration fees for the vaccine recipient (private insurance, Medicare, Medicaid, Health Resources & Services Administration [HRSA] COVID-19 Uninsured Program for noninsured recipients).

WHERE CAN I REPORT CASES OF SUSPECTED FRAUD?

Individuals becoming aware of any potential violations of the CDC COVID-19 Vaccination Program requirements are encouraged to report them to the Office of the Inspector General, U.S. Department of Health and Human Services, at 1-800-HHS-TIPS or <https://TIPS.HHS.GOV>

WHAT IS THE COUNTERMEASURES INJURY COMPENSATION PROGRAM?

The Countermeasures Injury Compensation Program (CICP) is a federal program that may help pay for costs of medical care and other specific expenses of certain people who have been seriously injured by certain medicines or vaccines, including this vaccine. Generally, a claim must be submitted to the CICP within one (1) year from the date of receiving the vaccine. To learn more about this program, visit www.hrsa.gov/cicp/ or call 1-855-266-2427.

WHAT IS AN EMERGENCY USE AUTHORIZATION (EUA)?

An Emergency Use Authorization (EUA) is a mechanism to facilitate the availability and use of medical products, including vaccines, during public health emergencies, such as the current COVID-19 pandemic. An EUA is supported by a Secretary of Health and Human Services (HHS) declaration that circumstances exist to justify the emergency use of drugs and biological products during the COVID-19 pandemic. A product authorized for emergency use has not undergone the same type of review by FDA as an FDA-approved product.

The FDA may issue an EUA when certain criteria are met, which includes that there are no adequate, approved, available alternatives. In addition, the FDA decision is based on the totality of scientific evidence available showing that the product may be effective to prevent COVID-19 during the COVID-19 pandemic and that the known and potential benefits of the product outweigh the known and potential risks of the product. All of these criteria must be met

Patient Instructions (continued)

to allow for the product to be used in the treatment of patients during the COVID-19 pandemic.

This EUA for the Pfizer-BioNTech COVID-19 Vaccine and COMIRNATY (COVID-19 Vaccine, mRNA) will end when the Secretary of HHS determines that the circumstances justifying the EUA no longer exist or when there is a change in the approval status of the product such that an EUA is no longer needed.

Comment:

NAA (Nucleic Acid Amplification) assays are the primary molecular diagnostic method for SARS-CoV-2 viral RNA detection (also known as RT-PCR or TMA).

This test is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA).

Test results are for the identification of SARS-CoV-2 RNA, which may be detectable in samples submitted during the acute phase of infection.

Positive / Detected. SARS-CoV-2 RNA present.

Negative / Not Detected results for SARS-CoV-2 do not rule out COVID-19 infection and should not be used as the sole basis for patient management.

Negative / Not Detected results must be combined with other information such as patient history, clinical observations and epidemiology. Resubmit if clinically indicated.

Presumptive Positive. Not all COVID-19 targets detected. Consider the test POSITIVE if there was a high pre-test probability of COVID-19 infection. Consider repeat testing if clinically indicated.

Inconclusive

. Not all COVID-19 targets detected. Consider repeat testing if clinically indicated.

For "Invalid" results a new specimen needs to be obtained for retesting.

This test is only authorized for the duration of the declaration that circumstances exist justifying the authorization of the emergency use of in vitro diagnostic tests for detection of SARS-CoV-2 and/or diagnosis of COVID-19 infection.

Visit Information

Self Triage Covid-19 Group Dt Scal

Last updated: 11/29/2022 11:42 AM PDT

What is the reason for your visit?

No Symptoms (Asymptomatic), Need a PCR Test

Your answers to the following questions are part of your medical record and should reflect your current symptoms. Treatment decisions are based on your answers and can be harmful if you are not answering the questions accurately. Changing answers to questions and submitting multiple E-visits may result in the inability to treat you online.

Do you have new difficulty breathing and worse shortness of breath when walking fast or up the stairs?

No

Do you currently have any COVID-19 symptoms?

No

Why do you need to be tested?

I was exposed to someone who has COVID-19

When were you exposed?

11/28/2022

I have reviewed and understand the instructions above.

Which method would you prefer?

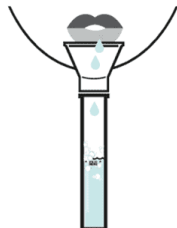

Saliva - Go to KP Facility for the Saliva Test

11/29/2022 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

Patient Instructions

Selftriage Order Reuse C19_Sx_Asx_Saliva_Pcr_Test_Appt Adult_Peds Regn Peq_Scal

VERY IMPORTANT: READ THE FIRST 3 BULLET POINTS

- A COVID-19 **PCR SALIVA-based test has been ordered** for you **on 9/24/2024**. **No need to** contact your healthcare team.
- A **SALIVA** sample will be collected at the testing location. To ensure accuracy of the results, **do NOT eat, drink, chew gum, or smoke for at least 30 minutes** before giving your saliva sample.

[Testing Locations](#)

Results are available within **1-2 days** of specimen collection. Plan your testing accordingly. If you do not receive a notification **after 3 days** from the test date, please call the Appointment Center at [1-833-574-2273](tel:1-833-574-2273) (TTY 711) or notify your provider.

You will receive an automatic notification with a link to a letter providing guidance on self-isolation. The letter can be found for:

- Age 18 or older - under **Medical Records > Letters** section.
- Age under 18 - under **Message Center > Inbox** section.

You can always click on the E-visit History located at the bottom of the E-visit menu for a copy of these instructions.

Note: To manage your health and find many useful resources including your customized Personal Action Plan, visit kp.org/actionplan to see what you can take control of today!

Thank you for completing this E-visit. Hope you stay safe.

LIFE CARE PLANNING ADVOCATE NOTE

Patient provided the following:

- Life Care Planning (LCP) overview
- The importance of selecting a healthcare decision maker and review of the qualities of a well-chosen healthcare decision maker:
 - Agrees to be your decision maker and knows you well.
 - Someone you trust to honor your wishes & values, even if they are different from their own.
 - Able to make decisions in difficult situations.

Healthcare Decision Maker Identified: Healthcare decision maker not identified at this time

Follow-up Plan: Patient given an advance directive to complete

Components

Component	Value	Reference Range	Flag	Lab
CREATININE	1.01	<=1.10 mg/dL	—	SCPMG
EGFR, CREATININE-BASED FORMULA (CKD-EPI 2021)	70	>=60 mL/min/BSA	—	SCPMG

Comment:

GFR estimate is by the CKD-EPI 2021 equation which uses age, sex, and serum creatinine. GFR estimate is less reliable if on dialysis or if acute kidney injury. Additional advice for the provider is available in Renal Failure Risk Assessment below.

CKD Categorization by GFR & ACR (urine Albumin/Creatinine Ratio = microalbumin/creatinine)

GFR >3 months	ACR <30(A1)	ACR 30-<300(A2)	ACR 300+(A3)
=====	=====	=====	=====
>=90		CKD1 A2 or *	CKD1 A3
60-<90		CKD2 A2 or *	CKD2 A3
45-<60	CKD3a A1 or *	CKD3a A2	CKD3 A3
30-<45	CKD3b A1	CKD3b A2	CKD3 A3
15-<30	CKD4 A1	CKD4 A2	CKD4 A3
<15	CKD5 A1	CKD5 A2	CKD5 A3

* or may label 'abnormal kidney function' or 'proteinuria' as appropriate.

Labs (continued)

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	5.6	4.6 - 5.6 %	—	SCPMG

Comment:
A repeatable HbA1c > or = 6.5% is diagnostic of diabetes. A single HbA1c > or = 6.5% can also be confirmed by a fasting plasma glucose measurement > 125 mg/dL, a random plasma glucose > or = 200 mg/dL, or a 2 hour oral glucose tolerance test result > or = 200 mg/dL. Patients with HbA1c of 5.7-6.4% are at increased risk for future diabetes.

VITAMIN D, 25-HYDROXY [1639220590]

Resulted: 06/13/23 1250, Result status: Final result

Order status: Completed

Filed by: Interface, Scal_Lab_Cerner 06/13/23 1250

Collected by: H497987 06/07/23 1541

Resulting lab: SHERMAN WAY REGIONAL LABORATORY

Narrative:

RMS ACCN: 744095259

Acknowledged by: Yau, Rani Y (D.O.), D.O. on 06/13/23 1616

Components				
Component	Value	Reference Range	Flag	Lab
VITAMIN D, 25-HYDROXY, D3	78	ng/mL	—	956
VITAMIN D, 25-HYDROXY, D2	<4	ng/mL	—	956
25-HYDROXYVITAMIN D	78	30 - 100 ng/mL	—	956

Comment:

There is general consensus (Endocrine Society, Natl Osteoporosis FDN, K_DOQI) that 25-OH Vitamin D measurements > 30 ng/mL are desirable. However, most Americans are deficient by this standard (NHanes III).

Levels <10 ng/mL are consistent with a diagnosis of Rickets/Osteomalacia.

Infants normally produce Vitamin D metabolites that falsely elevate 25-OH Vitamin D measurements. Please order D,25-Hydroxy, Neonatal [82306D] for these patients.

This test was developed and its performance characteristics determined by each applicable laboratory in the Southern California Permanente Medical Group Laboratory System where the test is performed. It has not been cleared or approved by the FDA. Each applicable laboratory is regulated under CLIA as qualified to perform high-complexity testing. This test is used for clinical purposes. It should not be regarded as investigational or for research.

Patient Instructions

Your doctor recommends that all adults plan for life's “what ifs” and identify their future health care choices in an Advance Health Care Directive. An Advance Health Care Directive (also known as a Living Will) is a form where you can write down your values and choose a health care decision maker.

We have **Life Care Planning** services that will help you reflect upon your values and beliefs so you may write down your future health care decisions in an Advance Health Care Directive. This type of planning can also help prepare your health care decision maker to honor your wishes.

You can begin your Life Care Planning by following these steps:

1. Call your local Center for Healthy Living department to sign up for a **Life Care Planning workshop** or you can now register for a Life Care Planning Workshop online! Sign in to or register with KP.org, go to Appointment Center, schedule an appointment, Select “Health Education Programs”, then Life Care Planning.
2. Go to kp.org/lifecareplan to view videos and complete and print an interactive Advance Health Care Directive. Be sure to talk with your health care decision maker about your treatment preferences.
3. Your health care team wants to know your wishes. Once completed, have your Advance Directive notarized **or** have two witnesses sign it.
 - **Email a copy to:** scalcentralized-scanning-center@kp.org **OR**
 - **Mail a copy to:** Kaiser Permanente, Central Scanning Center, 1011 S. East Street, Anaheim, CA 92805. If you already have an Advance Health Care Directive or completed one as part of a living trust , please **email or send in a copy** to the address above.
4. We recommend you review your Advance Health Care Directive often to make sure it reflects your current values and wishes. **Visit kp.org/lifecareplan or attend a workshop** to help you and your health care decision maker think and talk about what you would want as your life changes.
5. Talk with your loved ones so they understand your wishes and can follow them.

These are important decisions to make. Life Care Planning is a gift you can give yourself and your family. We encourage you to start your planning today!

02/16/2023 - Office Visit in FAMILY PRACTICE (continued)

Patient Instructions (continued)

Your personal doctor and care team's goal is to always:

- Review** your medical record.
- Talk** about the prescription medications you're taking.
- Stay informed** about the care you're getting from specialists.
- Coordinate** your care among different care team members and services.

You and your doctor get test results as soon as they're ready:
You and your doctor will receive an email when your test results are ready on kp.org
Your doctor or someone from your care team will follow up if there are any concerns.

Kaiser Permanente doctors, nurses, pharmacists, and other care team members **coordinate your care** by sharing and accessing information through your electronic medical record.
You can also view your medical record through our **Kaiser Permanente mobile app** or **kp.org**.

Need a kp.org account? Visit **kp.org/register** to create a secure account or download the **Kaiser Permanente mobile app**.

Chief Complaint

Patient presents with

- BACK PAIN
low back pain and left lower extremity pain TAV 05/19/2020

History of present complaint:

Onset:
Adapted from previous notes:
<chronic low back pain, left lower extremity pain.>
Last visit, thought to have lumbosacral degenerative changes, chronic low back pain and left posterior thigh pain, numbness, likely left lower extremity radicular symptoms.
Reviewed lumbar CT, treatment options.
Ibuprofen as needed. Risks, benefits, side effects of medication discussed. Patient declined other medications at that time.
Physical therapy. Patient was not able to do physical therapy.
Patient still with intermittent lower extremity numbness/tingling that last for about 15 minutes then resolves. Per patient this usually happens if she is sitting on a bar stool. Also with occasionally chronic low back pain. Patient cannot recall which lower extremity gets numb as it happens occasionally and last time was 2 weeks ago.

Location of complaint:
Lumbosacral
Patient can't recall which lower extremity get numb, last time was about 2 weeks ago

Characteristics of symptoms: numbness, pain. moderate-severe if she does have back pain

Aggravating factors:
Sitting for a bar stool

Alleviating factors:
time

Treatment(s) Tried:
See above

Associated symptoms:
Intermittent lower extremity numbness/tingling
Denies lower extremity weakness
Currently denies bowel and bladder incontinence

Past medical history reviewed

Lumbar ct

Signed by Kang, Jay Woung (M.D.), MEDICAL DOCTOR on 05/18/20 at 1508

CLINICAL HISTORY: ReasonReason patient unable to get MRI due to facial surgery and metal plate. 43 y/o f with chronic low back pain and left posterior thigh pain, numbness, likely left lower extremity radicular symptoms.

COMPARISON: No previous study available for comparison.

TECHNIQUE: Study performed per protocol

CT Dose:

As required by California law, the CTDIvol and DLP radiation doses associated with this CT study are listed below. This represents the estimated dose to a standard lucite phantom resulting from the technique used for this study, but is not the dose to this specific patient.

Type / CTDIvol / DLP / Phantom

Helical / 5.62 / 184.62 / B

Total Exam DLP: 184.62

CTDIvol = mGy DLP = mGy-cm

Phantom: B=Body32, H=Head16

FINDINGS:

Normal lordosis. No compression fracture or spondylolisthesis. No significant disc space narrowing.

T12-L1: Unremarkable.

L1-2: Unremarkable.

L2-3: Unremarkable.

L3-4: Diffuse 2 mm posterior disc bulge. Mild ligamentum flavum hypertrophy.

L4-5: Diffuse 3 mm posterior disc bulge. Mild ligamentum flavum hypertrophy.

L5-S1: Diffuse 3 mm posterior disc bulge.

No significant neuroforaminal stenosis. No significant spinal canal stenosis. Paraspinal soft tissue structures are intact.

IMPRESSION:

02/17/2023 - Office Visit in PHYSICAL MEDICINE (continued)

Clinical Notes (continued)

No acute findings. Diffuse mild posterior disc bulge at L3-4, L4-5, and L5-S1. No significant spinal canal stenosis. No significant neuroforaminal stenosis.

Review of Systems
Constitutional: Negative for fever and unexpected weight change.
Musculoskeletal: Positive for **back pain**.

PHYSICAL EXAM:

Vitals

Vitals:	02/17/23 0912	02/17/23 0913
BP:	(!) 138/90	127/85
BP Patient	SITTING	STANDING
Position:		
BP Location:	RA-RIGHT ARM	RA-RIGHT ARM
Cuff Size:	Small Adult	Standard Adult
Pulse:	74	70

Alert and oriented, normal gait, able to stand on heels and toes
Tender to palpation lumbosacral
limited range of motion of back
Manual muscle testing 5/5 in bilateral lower extremities
Sensation intact bilateral lower extremity
Deep tendon reflexes symmetric, no clonus
left: negative straight leg raise
right: negative straight leg raise

Assessment and plans:

	ICD-10-CM
1. LUMBAR RADICULOPATHY	M54.16
2. LUMBAR SPONDYLOSIS	M47.816
3. CHRONIC LOW BACK PAIN	G89.29
	M54.50

Note: 46 y/o f with lumbosacral degenerative changes, with intermittent chronic low back pain and intermittent lower extremity numbness/tingling.
Plan:
Reviewed lumbar CT, treatment options.
Discussed she can use Ibuprofen as needed if she has low back pain. Risks, benefits, side effects of medication discussed. Patient declined medications at this time as she does not have any pain.
Advised on posture, ergonomics, proper seating. Physical therapy referral. Follow up if not improving or worsening.
Advised on spine precautions, home exercise program, modalities, and neuro warning signs.
Return to clinic as needed. Patient advised to call back with any significant problems, worsening of symptoms or problems with medications PRN.

Patient Instructions

Physical Therapy Referral:

02/17/2023 - Office Visit in PHYSICAL MEDICINE (continued)

Patient Instructions (continued)

Your doctor has prescribed Physical Therapy for you. Please call the Physical Therapy department at 855-881-0752 after 12 noon the next business day to schedule an appointment. They will help determine which location is best for you. The number of sessions is determined by the Physical Therapist.

We want you to THRIVE!

At Kaiser Permanente, we care about keeping you healthy.

You are due for preventative health actions.

Please complete within 14 days.

☒ Breast Cancer Screening (Mammogram)	You are due for a mammogram. Mammograms can detect breast cancer early. Please call 714-223-3028 to schedule your mammogram today.
☐ Cervical Cancer Screening (Pap Test)	You are due for cervical cancer screening (Pap test). A Pap test detects cervical cancer early. Please call 1-833-KP4CARE (1-833-574-2273) to schedule an appointment with your Healthcare Provider.
☐ Colorectal Cancer Screening	You are due for colorectal cancer screening. If you received a stool test kit (iFOBT) in the mail, please complete it at home and mail it back to us for free or bring it into one of our labs. If you do not have a kit, please pick up a kit at one of our primary care clinics. You are due for a repeat colonoscopy. Please call our GI department at 714-279-4200 to schedule your colonoscopy.
☐ High Blood Pressure	You are due to have blood pressure checked. You may have this done during your doctor's visit, or by making an appointment with one of our Nurse Clinics. Please call 1-833-KP4CARE (1-833-574-2273) to schedule an appointment.
Laboratory Tests ☐ A1c ☐ Urine for Microalbumin ☐ Creatinine ☐ Electrolytes	You are due for laboratory testing (blood or urine). Please go to any Kaiser Permanente laboratory within the next week to complete these tests.

02/17/2023 - Office Visit in PHYSICAL MEDICINE (continued)

Patient Instructions (continued)

☐ Diabetic Retinal Eye Screening	☐ You are due for a diabetic retinal eye photo. This can be done at a nurse visit at your primary care clinic. ☐ You are due for a follow up appointment with an optometrist or an ophthalmologist for diabetic retinal eye exam. ☐ Please call 1-833-KP4CARE (1-833-574-2273) to schedule an appointment.
☐ Diabetic Foot Exam	☐ You are due for a diabetic foot exam. Please call 1-833-KP4CARE (1-833-574-2273) to schedule an appointment in primary care.
☐ Bone Density Screening	☐ You are due for bone density screening. Please call 714-223-3028 to schedule an appointment.
☐ Chlamydia Testing	☐ You are due for chlamydia testing. This is a screening urine test for young women. Please go to the lab to complete this test.
☐ Immunizations (Vaccines)	☐ Influenza (Flu) - For times and locations, please visit www.kp.org/flu The following immunizations are available during a provider visit, or in our Nurse Clinics. Please call 1-833-KP4CARE (1-833-574-2273) to schedule an appointment. ☐ Pneumonia - This vaccine protects you from a common type of pneumonia. ☐ Tdap - Whooping cough (Pertussis) is contagious and easily spread through coughing. ☐ HPV - This vaccine is for cancer prevention. ☐ Hepatitis B - This vaccine series prevents liver infection and liver cancer related to Hepatitis B. ☐ Meningitis - This vaccine helps protect from a severe brain infection. ☐ Shingles - This vaccine provides strong protection against shingles and related complications. ☐ Covid-19 Immunization Bivalent Booster Dose Due ☐ Covid-19 First Immunization Dose Due

02/17/2023 - Office Visit in PHYSICAL MEDICINE (continued)

Patient Instructions (continued)

☐ Quit Smoking	☐ We can help you quit. <i>By phone:</i> FREE Smoking Cessation Program -- Wellness Coaching by phone at 1-866-862-4295 . Available in English and Spanish ☐ <i>Online:</i> Join SmokeFree KP a 90-day texting program to help you smoke less or quit. Visit your Personal Action Plan on kp.org to sign up or ask your nurse/provider to sign you up. ☐ <i>In person:</i> Attend a workshop: Please call 714-748-2714 to schedule a workshop. ☐ <i>Ask your physician:</i> about medication to help you quit.
☐ Take Charge of Your Health (Workshops)	There are many workshops to help you achieve your goals. Please call 714-748-2714 to schedule a workshop available through Center for Healthy Living. You can also register for workshops by using the QR Code with your smartphone below. ☐ High Blood Pressure / High Cholesterol – Taking Care of Your Heart ☐ Diabetes – Living Well with Diabetes (4 Workshop Series) ☐ Congestive Heart Failure – Heart Failure: Living Well Each Day ☐ Stress & Emotional Health: An Overview ☐ Smoking Cessation – Freedom from Tobacco Workshop ☐ Weight Loss – Weight Management Overview ☐ Other workshops:  English QR Code  Spanish QR Code
☐ Take care of your health on www.kp.org	Log-in and register at www.kp.org to view certain routine lab results, e-mail your doctor, or for health tips and tools to help you live well, be well and thrive.

Location: Kraemer MOB2
(By the reception desk and the gift shop)

Hours of Operation:
Monday - Friday 8:30AM - 4:30PM

Quick and easy. **No appointment needed.**

Services Provided

- Walk-In Blood Pressure Reading
- Walk-In Diabetic Retinal Photo
- Adult Vaccinations (Pneumo, Tdap, Shingrix, etc.)
- Pediatric Vaccinations (For ages 9 and older)
- Weight & Height Check
- Assistance with Registering for KP.org
- Smoking Cessation Information
- Schedule Health Education Classes
- Schedule COVID-19 Vaccination Appointments (KP Members Only)
- Schedule Preventative Screening Appointments: Mammogram, Diabetic Foot Exam
- Pick-Up Colorectal Screening KIT

Referred by: Dr. Peterson
Previous Dx: Right lateral epicondylitis

Patient here for follow up right lateral epicondylitis. Failed cortisone injection. Here for platelet rich plasma

PRP (Platelet Rich Plasma) Injection

Date of Procedure: 3/18/2023

Procedure Performed: PRP (Platelet Rich Plasma) Injection of right lateral epicondyle

Informed Consent: I have explained the risks of the procedure including, but not limited to: pain, infection, no improvement of condition, nerve or vessel injury, skin discoloration, calcification, scarring, thrombophlebitis, possible need for further injection, and possible surgical intervention if not improved. The patient understands and agrees to proceed with injection.

Procedure Details: Michelle E Tiu is a 46 year old female who was referred to me for PRP injection for right

03/18/2023 - Orthopedic Office Visit in ORTHOPEDICS (continued)**Clinical Notes (continued)**

lateral epicondyle. After the risks and benefits were discussed and after informed consent, 15ml of autologous blood was obtained via the Median Cubital Vein at the level of the antecubital fossa with a butterfly needle. The blood was spun down in a centrifuge for 5 minutes and approximately 5ml of PRP was obtained.

The injection site was confirmed and cleaned with alcohol. Right lateral epicondyle 0.5ml of 1% lidocaine plain was injected at the point of maximal tenderness prior to PRP injection. The PRP was then injected and the patient tolerated this well. A band-aid was placed for dressing.

Post-procedure instructions were given to the patient.

Post-procedure plan:

- Activity modification for 1 week post-injection.
- Do not submerge injection site under water for 2 days.
- Avoid anti-inflammatory medications unless significant post-injection inflammatory response.
- Ice as needed.
- Tylenol for pain.
- TAV in 2 months

Patient Instructions

Post-Procedure Instructions for Platelet Rich Plasma (PRP) injection:

- You will likely experience pain for about 3-5 days after your injection.
- Reduce activity for up to 7 days following injection. You can do your normal daily activity but avoid excessive activity while this is painful.
- Avoid anti-inflammatory medications for a minimum of 1 week (4 weeks if possible).
- Acetaminophen (Tylenol) can be used to help with pain/discomfort if needed.

03/18/2023 - Orthopedic Office Visit in ORTHOPEDICS (continued)**Patient Instructions (continued)**

- You may apply ice packs to the injection site 3-5 times daily for no more than 15 minutes at a time if needed for pain and/or swelling.
- You may experience a light tingling and/or burning sensation at the injection site for up to 3-5 days post-injection.
- Do not rub or massage the area of injection excessively.
- You may shower but do not submerge injection site under water (Bathtub or swimming pool) for 2 days.
- Most patients experience improvement of the pre-injection pain within 2-3 weeks after injection.

Electronically signed by Noyola, Elizabeth Marie (M.A.), M.A. at 3/18/2023 9:05 AM

6/7/2023

PRIMARY CARE PHYSICIAN: Atoian, Ani Ardashian (M.D.)

SUBJECTIVE:

Chief Complaint

Patient presents with

- ARM PAIN
SHOULDER, ELBOW, FOREARM, RIGHT SIDE X SATURDAY
- FORMS
WORK NOTE 6/7

Appointment Booking Comments: RM 19-- left elbow pain

History of Present Illness:

Michelle E Tiu is a 46 year old female complains of constant right shoulder, elbow, and tricep pain since Saturday.
Describes a tension pain that radiates down the right elbow.
+ stiff in forearm.
+ numbness in the tricep area. No tingling.
No recent trauma.
No sports.
Resting and raising the right arm with improvement of pain.
Driving and typing make the pain worse.
She reports working extra hours and using her right arm to move the eye exam equipment around that cause the pain.
Tylenol and Meloxicam Did not help with pain.

Comments: **Limited active range of motion in right arm abduction.**

+ tenderness to palpation on acromioclavicular joint.

No limited range of motion with right elbow flexion and extension.

Skin:

General: Skin is warm and dry.

Coloration: Skin is not pale.

Findings: No bruising, erythema, lesion or rash.

Neurological:

Mental Status: She is alert.

=====

ASSESSMENT AND PLAN

RIGHT ARM PAIN (primary encounter diagnosis)

Comment: Discussed risks and benefits of medications. Recommend toradol IM injection today for pain control. Start prednisone on 6/8. Avoid oral NSAIDs while on prednisone. Okay to apply Voltaren gel on areas of pain. Modified work note for 7 days provided. Patient asks for off work note. Discussed off work note is not appropriate as patient is not completely incapacitated. Patient can consider FMLA if long-term work accommodation is desired. Follow up with primary care physician if symptoms fail to improve. Patient is agreeable with the plan.

RIGHT SHOULDER JOINT PAIN

Message from your provider		
From Curtis Edward (D.O.) Wong, D.O. Last Read in kp.org 6/9/2023 8:52 AM by Tiu, Michelle E	To Tiu, Michelle E	Sent and Delivered 6/8/2023 2:56 PM

Dear Ms. Tiu,

Your recent cholesterol levels were abnormal, which can raise your risk of a heart attack and stroke over time. At this level, however, you do not necessarily need medication, but should follow the heart healthy recommendations below:

- Enjoy a diet rich in vegetables, beans and fiber. Good choices include fruits, vegetables, whole grains (like oatmeal), dried beans and peas, nuts and seeds, soy products (like tofu), and fat-free or low-fat dairy products.
- Be physically active. Get at least 30 minutes of exercise on most days of the week. Even walking is a good choice.
- Avoid processed and packaged foods like chips, crackers, cookies and sweetened beverages.
- Minimize red meat and limit poultry and eggs.
- Bake, broil, or steam foods. Don't fry them.
- Minimize fat intake by avoiding butter and margarine. Limit use of oils.
- Stay at a healthy weight or lose weight by making the changes in eating and physical activity listed above. Losing just a small amount of weight, even 5 to 10 pounds, can reduce your risk for having a heart attack or stroke.
- Do not smoke.
- Look for information about lowering your cholesterol on kp.org in your online action plan or through the KP Center for Healthy Living (Health Education).

06/08/2023 - Patient Message in FAMILY PRACTICE (continued)

Messages (continued)

- Have a check of your cholesterol done every year or two and consider taking a cholesterol lowering medicine in the future.

If you would like, call the appointment center to get information about possible classes on cholesterol, or to leave a message to discuss this with a phone, video or office visit.

Please follow-up with your primary care physician's office if you have any further questions or concerns.

Sincerely,

Curtis E. Wong, D.O. (covering for your primary care provider, Dr. Ani Ardashian Atoian (M.D.))

06/09/2023 - Patient Message in FAMILY PRACTICE (continued)

Messages (continued)

Hi Michelle,

You've been approved for acupuncture. See note from Physical Medicine.

A referral has been placed for your patient for Acupuncture.

Please wait 15 business days from today to get a courtesy letter from American Specialty Health. They will have to review the acupuncture referral from Kaiser Permanente. If you don't get the letter after 15 business days, please call (ASH) American Specialty Health at 1-800-678-9133, select option #3

If you book an appointment with an acupuncturist without having your referral approved, you may be charged out of pockets fees.

If you want to check on an acupuncturist that is approved by American Specialty Health, you can go to their web site at <https://www.ashlink.com/ash/kpacu>

Acupuncture referral is valid for 1 year. The number of acupuncture sessions will be determined by American Specialty Health. Your doctor can only enter a referral , number of approved sessions is up to American Specialty Health.

- Dr. Wang

Michelle E Tiu is a 46 year old female

Chief Complaint

Patient presents with

- FOLLOW UP ROUTINE
Shoulder, Elbow, and neck pain

HPI

Patient here today for routine follow up.

Patient here with complaints of right neck, shoulder, elbow and tricep pain x1 week. Sometimes pain goes down to right 4th finger.

Denies injury.

Was seen in clinic on 6/7 for similar complaint.

Given toradol IM and oral prednisone. Previously tried mobic and tylenol wo relief.

XR of shoulder pending.

Of note patient with history of cervical myofascial pain syndrome, bilateral shoulder impingement and neck pain.

PHYSICAL EXAMINATION

06/09/2023 - Office Visit in FAMILY PRACTICE (continued)

Clinical Notes (continued)

(Exact Date) | SpO2 100% | BMI 22.06 kg/m²

Estimated body mass index is 22.06 kg/m² as calculated from the following:

Height as of this encounter: 5' 2" (1.575 m).

Weight as of this encounter: 120 lb 9.5 oz (54.7 kg).

Physical ExamConstitutional:

Appearance: Normal appearance.

HENT:

Head: Normocephalic and atraumatic.

Mouth/Throat:

Mouth: Mucous membranes are moist.

Eyes:

Extraocular Movements: Extraocular movements intact.

Pupils: Pupils are equal, round, and reactive to light.

Neck:

Thyroid: No thyroid mass or thyromegaly.

Trachea: Trachea normal.

Comments: **Spurling's + on right side**

Musculoskeletal:

Right elbow: No tenderness.

Cervical back: Normal range of motion. **Pain with movement** and **muscular tenderness** present. No spinous process tenderness.

Neurological:

Mental Status: She is alert.

ASSESSMENT

1. CERVICAL RADICULOPATHY
2. CERVICAL MYOFASCIAL PAIN SYNDROME

PLAN

- will get imaging
- gentle stretching
- refer to physical therapy
- increase prednisone, add robaxin
- acupuncture referral

Dear Ms. Tiu,

Hello. Thank you for your e-mail.
My name is Victoria Neunhoffer, RN. I am assisting with emails for your Physician, Atoian, Ani Ardashian (M.D.).

I see that you have an appointment on 06/15/2023.

Future Appointments				
Date	Time	Provider	Department	Center
6/15/2023	11:10 AM	Wang, Joshua (D.O.), D.O.	T4PCF2	TRMU

Please keep this appointment to evaluate your concerns with travel medications.

We also want to remind you that as your healthcare provider, Kaiser Permanente is your partner in maintaining good health.

Our records indicate that you are due for the following:
Reminders - you are overdue for the following care gaps:

COLORECTAL CANCER SCREENING: You are due for colorectal cancer screening. If you received a stool test kit (iFOBT) in the mail, please complete it at home and mail it back to us for free or bring it into one of our labs. If you do not have a kit, please pick up a kit at one of our primary care clinics or you may order one from KP.org in your Personal Action Plan.If you order one from KP.org, please remember to confirm that the mailing address is correct.

Thank you for choosing Kaiser Permanente as your healthcare provider.

Get well, stay well, and THRIVE!

Sincerely,

Victoria J. Neunhoffer, BSN, RN - BC on behalf of Dr.Atoian, Ani Ardashian (M.D.)

Chief Complaint:

SHOULDER INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:

Mechanism of injury: "right shoulder injury working in different non-ergonomic work locations, exam rooms and offices". States that her workstation at work is normally set up ergonomically but due to the COVID-19 pandemic she has been asked to work at different locations that are not ergonomic. She states she has been working at these locations and has been starting to have pain in her right shoulder. She states that the chair and monitor have not been set up ergonomically in a few locations, and some equipment was stiff and would not move easily. Indicates that her right shoulder does not bother her when she works at her usual office that is ergonomically set up.

Diagnostic Testing:

None

First visit treatment with Dr. Jeffers 7/16/2020:

'Treatment and Supplies:

1. Salon pas patches prn.
2. The patient is advised to apply ice or cold packs intermittently as needed to relieve pain.
3. The patient is advised to apply heat intermittently (avoid sleeping on heating pad).
4. Home exercise program.
5. Requires ergonomic workstation while working.'

06/20/2023 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Gradually improving

Michelle E Tiu is a 46 year old female with the following subjective factors:

Patient Complaints:

Since last visit patient presents in followup after long hiatus, referred by insurer.

Patient reports she developed neck pain over the past few weeks after volunteering to assist with access by working frequent overtime and doing 10 hour days. She was seen by Kaiser Permanente health plan physician with diagnosis of cervical radiculopathy and has been advised off work. She reports developing pain in her neck radiating to the right upper trapezius and shoulder.

She has trouble getting comfortable in bed secondary to neck pain

Currently, the patient points to indicate:

midline lower neck and right upper trapezius/lateral shoulder discomfort

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva pain

Patient history of ulcers, reflux, or renal function impairment.

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Total Temporary Disability (TTD)

OBJECTIVE FINDINGS:

Vital Signs:

06/20/2023 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

Cervical spine

Stance: protracted neck

Tender to palpation lower cervical spine and right upper trapezius/Lev scap

Active range of motion

Flexion chin to chest, extension 35 deg

Rotation 60 deg right , 70 deg left

Right shoulder

Stance: protracted

Tender to palpation max at

Non tender to palpation acromioclavicular joint, anterior biceps groove, greater tub

Active range of motion

Flexion 170deg

Abduction 170deg

(-) Hawkins

(-) Neers mild

Neuro

Normal light touch

DTR 2+ bilateral bi, tri

DIAGNOSES:

M75.21 TENDINITIS OF RIGHT BICEPS TENDON

M75.41 IMPINGEMENT SYNDROME OF RIGHT SHOULDER

TREATMENT PLAN:

Medications:

The medication(s)/supplies/radiological studies ordered this visit:

No orders of the defined types were placed in this encounter.

Treatment Rendered:

06/20/2023 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Injury Date: 7/10/20
Claim Number: 30205738825-0001
Employer: KP SCAL

ASSESSMENT:

Michelle E Tiu is a 43 year old female who presents with complaints of neck and right upper trapezius pain

History and physical examination was consistent with
Symptoms of cervical spine origin, and NOT related to this claim

If patient chooses to treat under worker's compensation, this should be considered a new claim.

PLAN:

Continue treatment through KP health plan
Cervical spine exercise sheet given to supplement information given by other SCPMG physician
No follow up needed under this claim

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

WORK STATUS:

See Below

Primary Treating Physician:

I declare under the penalty of perjury that this report is true and correct to the best of my knowledge and I have not violated Labor Code §139.3.

---End of Progress Notes---

07/07/2023 - Office Visit in OPTOMETRY (continued)

Clinical Notes (continued)

ASSESSMENT/PLAN:

1) Myopia OU, Astigmatism OU, Presbyopia

- Spectacles Rx updated/released
- Mini monovision CL Rx (*OD distance, OS near*) finalized/released today
- **Order toric trial lenses for distance OU for pt to trial; chart CC'ed to Mary Ann Soto (schedule CRET upon arrival)**
- Return to clinic STAT should pain/redness/vision changes arise

****Addendum 09/08/23:***Pt endorses preferred vision & comfort with spherical correction OU; Finalized CL Rx updated/released to pt.*

Pt was advised to return to the clinic or go to urgent care if there's any redness, eye pain, decreased vision or any changes

RTC: **CRET** for finalization of distance CL OU upon arrival of trials

See diagnosis and orders, if applicable. All questions were answered. Results discussed with patient. Pt states understand and agrees with plan.

Current Contact Lens Rx Comments

Patient's current contact lens rx1 monovision, not happy at near vision. Tried rx 2 monovision. Rx 3 for both eyes distance. Rx 4 today's trials, wants distance more clear. Order rx5, monovision

Edited by: Mach, Janet Gia (O.D.), O.D.

Order: dispense upon arrival.

VISTAKON - Acuvue Oasys 1-Day Astigmatism, 8.5/14.3

OD: 8.5 / 14.3 / -1.50 - 0.75 x 100 far

OS: 8.5 / 14.3 / -1.75 - 0.75 x 90 near

Assessment:

Z46.0 FITTING OR ADJUSTMENT OF GLASSES OR CONTACT LENSES

H52.4 PRESBYOPIA

H52.13 BILAT MYOPIA

H52.203 BILAT ASTIGMATISM

Plan:

CL RX RELEASED AS ABOVE FINAL CL RX

Patient was instructed to wear the lenses on a daily wear basis and to clean and disinfect the lenses using the recommended disinfection system. Patient instructed to replace the lenses Daily. Patient to remove lenses immediately and discontinue contact lens wear if patient experiences any redness, pain, light sensitivity or discomfort.

Advised Patient:

1. Do not sleep or swim with contact lenses. Do not any liquid other than contact lense solution come in contact with your contact lenses.
2. Remove contact lenses when eyes are irritated or red or have discharge or is blurry. Also, patient should make me or our contact lens fitter aware of the situation, so that appropriate care can be provided.
3. Back-up eyeglasses should always be available.
4. One day per week give eyes a rest and do not wear contacts.
5. Wash hands and use proper cleaning techniques when handling contact lenses.
6. Never re-use or top off soft contact lens solutions. Let the contact lenses case air dry. Replace cases every 3 months.
7. Use over the counter (Optive / Refresh) for sensitive eyes as needed when you have your contact lenses on.

It is understood that only medication(s) relevant to this encounter in this speciality is reviewed and not every medication can be fully reconciled at every visit.

Patient Education

Your Kaiser Permanente Care Instructions

Vertigo: Exercises

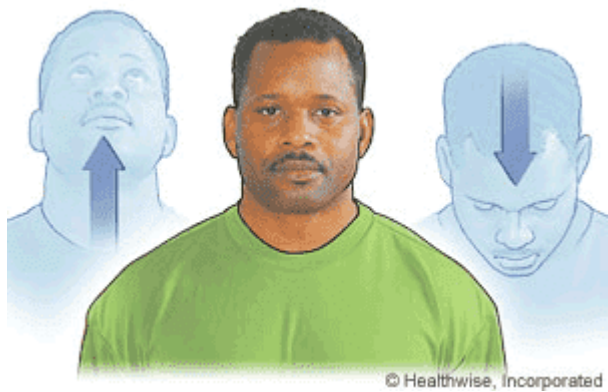

Introduction

Here are some examples of exercises for you to try. The exercises may be suggested for a condition or for rehabilitation. Start each exercise slowly. Ease off the exercises if you start to have pain.

You will be told when to start these exercises and which ones will work best for you.

How to do the exercises

Exercise 1

1. Stand with a chair in front of you and a wall behind you. If you begin to fall, you may use them for support.
2. Stand with your feet together and your arms at your sides.
3. Move your head up and down 10 times.

09/21/2023 - Allied Health/Nurse Visit in FAMILY PRACTICE ADULT NURSE CL (continued)

Patient Instructions (continued)

Exercise 2

1. Move your head side to side 10 times.

Exercise 3

1. Move your head diagonally up and down 10 times.

Exercise 4

1. Move your head diagonally up and down 10 times on the other side.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a

Tiu, Michelle E	P Famocimo2 Call Ctr Pool (supporting Ani Ardashian (M.D.) Atoian, M.D.)	10/3/2023 10:10 PM

Hi Dr. Atoian,

I wanted to let you know I had a bout of vertigo recently and I'm still feeling a bit dizzy at time and have been taking meclizine to help me. I remember my mom battled this on/ off for a long time and I wanted to see what to do to manage it or help get rid of it. I will continue to do the head exercises but wanted to see if there was something triggering it or other things that would help make it fully go away.

Thanks,
Michelle

Visit Information

Self Triage Covid-19 Vaccine Group Dt Scal

Last updated: 10/4/2023 7:49 AM PDT

What is the reason for your visit?

Scheduling COVID-19 Vaccine

Do you want to proceed with scheduling an appointment for COVID-19 vaccine?

I have read and understood the information above and have reviewed the Emergency Use Authorization.

Is the above COVID-19 vaccine information (date and manufacturer) CORRECT and COMPLETE?

Yes, the information above is correct and complete

10/04/2023 - Patient Self-Triage in SCAL OC E-VISITS ADMIN DEPT (continued)

Visit Information (continued)

Select from the following options:

I am NOT immunocompromised.

Have you had severe allergic reaction to any component of the COVID-19 vaccine (such as significant trouble breathing, wheezing, severe dizziness, or rapid heart rate) that required immediate medical treatment by a clinician?

No

If you do not want to continue with this E-visit, please click Cancel.

Select from the following two options:

I have read the information and understand the risks and benefits, and would like to proceed with the vaccination.

Outcomes

Outstanding Recommendations

Covid19 Vacc

Selftriage Scheduling C19_Vaccine Make_Appt Adult_Regn_Ga Peq_Scal

Michelle E Tiu,

You are almost done with this E-visit. Click **Schedule appointment** button below to **schedule for your vaccine shot**.

Stay safe and keep your vaccination appointment for the vaccine. To achieve nearly 95% protection from COVID-19 disease, schedule an appointment **at a Kaiser vaccination site**.

You will be monitored for 15-30 minutes after the vaccination for any type of reaction.

Note: You can manage your health and find many useful resources including your customized Personal Action Plan.

Please visit kp.org/actionplan to see what you can take control of today!

This concludes your E-visit.

Medication questions~Need a refill		
From Betsy Y (L.V.N.) Dominguez-Emiterio, L.V.N. Last Read in kp.org 2/8/2024 8:45 AM by Tiu, Michelle E	To Tiu, Michelle E	Sent and Delivered 2/7/2024 9:50 AM

Dear Michelle E Tiu

My name is Betsy Dominguez, LVN and I am assisting physician Atoian, Ani Ardashian (M.D.) with their messages. I read your message in regards about doxycycline for rosacea. I did a health record review and found this medication prescribed for acne and not rosacea. Please give us a call at the number 833-574-2273 to book an in person appointment or telephone appointment. You can also use kp.org to schedule.

Reminders - you are overdue for the following care gaps:

IMMUNIZATION(S) DUE - TDaP (TETANUS, DIPHTHERIA, ACELLULAR PERTUSSIS VACCINE): These immunizations are available during a provider visit, or in our Nurse Clinics. Please call 1-833-KP4CARE (1-833-574-2273) to schedule an appointment. If you are due for your flu vaccine ONLY, no appointment is needed. We offer the flu vaccine at our walk-up flu tables located in any of our OC KP facilities.

Sincerely,
BETSY Y DOMINGUEZ-EMITERIO LVN
on behalf of Dr Atoian, Ani Ardashian (M.D.)

Tiu, Michelle E	P Famocimo2 Call Ctr Pool (supporting Ani Ardashian (M.D.) Atoian, M.D.)	2/3/2024 11:28 AM

Hi Dr. Atoian,
My rosacea is acting up around my nose and cheek area and getting red and inflamed. I wanted to see if I can get back in the doxycycline you prescribed a long time ago or anything else you recommend to help.

Thanks,
Michelle Tiu

Greetings from your care team. **Following your recent virtual visit, we have noticed that you are due for the following vaccine immunization(s):**

Health Maintenance Due

Topic

- IMM HEP B (30-59 YRS) (1 of 3 - 3-dose series)
- IMM DTAP,TDAP,TD (42 DAYS-120 YRS) (4 - Td or Tdap)

The CDC and your care team recommend staying up to date on your vaccinations to help keep you healthy and thriving.

Schedule an appointment at your nearest nurse clinic to receive your vaccine(s) by following the steps below:

Step 1: Navigate to Kp.org	https://healthy.kaiserpermanente.org/southern-california/front-door
Step 2: Select “Health and Wellness”	
Step 3: Scroll down to “Preventative Care Actions Due”	
Step 4: Click “Schedule An Appointment”	
Optional Step 5: If you are unable to book an appointment, you may search for a Nurse's Clinic. Navigate to: Kaiser Permanente Facility Search

Occupational Medicine Patient Message

FYI Dr. Greenwood,

Patient was seen in SNC as a walk in today and was seen by Dr. Pham-Bailey. Patient was to be scheduled for 06/14/2024 per Dr. Pham-Bailey but no appointments available.

We were able to book patient for a video visit at KM on 06/17/2024 (she is not able to come to clinic this day but agreed to a video visit) but in the instance that you would prefer for her to be an in office appointment, patient would like to continue seeing you at SNC or HBM.

If you would like to see her sooner, please let SNC nurses know so we may call patient to reschedule her appointment.

DOCTOR'S FIRST REPORT OF OCCUPATIONAL INJURY OR ILLNESS

--- This document is for State Form (DFR) ---

Michelle E Tiu is a 47 year old right handed female

Origin of Injury:

Injury Date: 5/28/2024

47 year old OPTOMETRIST x 20 yrs

Mechanism of injury: Developed RIGHT sided pain with reaching out and over shoulder level frequently with non-ergonomic exam room and office

Reports constant keyboarding with arms outstretched, and frequent over head reaching for equipment.

Translation required: No

SUBJECTIVE COMPLAINTS:**Treatment History for This Injury:**

Michelle E Tiu states her symptoms started.

X-rays performed relative to this visit: personally reviewed by me

Chief Complaint:

SHOULDER INJURY and ELBOW INJURY

Nursing notes reviewed by N M PHAM-BAILEY MD.

Current Complaints Today:

Patient Complaints:

Currently, the patient reports

Multiple pain symptoms related to right neck shoulder arm

Aggravated with right arm reaching

Denies right arm paresthesias

Prior WC claims

DOI 2016 RIGHT SHOULDER claim was Closed 10/25/2018 Patient is at permanent and stationary and maximal medical improvement on 5/2/2019 with future medical anticipated and no permanent restrictions.

DOI 7/10/2020 For RIGHT SHOULDER was Last seen Dr GREENWOOD 6/20/2023

... Patient Complaints: Since last visit patient presents in followup after long hiatus, referred by insurer.

"Patient reports she developed neck pain over the past few weeks after volunteering to assist with access by working frequent overtime and doing 10 hour days. She was seen by Kaiser Permanente health plan physician with diagnosis of cervical radiculopathy and has been advised off work. She reports developing

05/28/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

pain in her neck radiating to the right upper trapezius and shoulder.

She has trouble getting comfortable in bed secondary to neck pain

Currently, the patient points to indicate: midline lower neck and right upper trapezius/lateral shoulder discomfort

... ASSESSMENT: Michelle E Tiu is a 43 year old female who presents with complaints of neck and right upper trapezius pain

History and physical examination was consistent with Symptoms of cervical spine origin, and NOT related to this claim

If patient chooses to treat under worker's compensation, this should be considered a new claim."

In 2023, she went outside kaiser and treated nonindustrially for right neck shoulder pain - was off work 2 wks.

Then for WC She was told to put in new claim for RIGHT neck area

REVIEW OF SYSTEMS:

The patient completed the Regional Review of Systems Questionnaire and I reviewed.

General: No fever, chills, or sweats

Eyes: No eye pain, blurry vision, double vision, or visual disturbances

Ears, Nose, Throat, and Mouth: No pain, hearing loss, or ear ringing

Cardiovascular: No chest pain or palpitations

Respiratory: No wheezing, cough, or shortness of breath

Gastrointestinal: No nausea, vomiting, or abdominal pain

Genitourinary: No painful urination

Skin: No rash, redness, or swelling

Psychiatric: No anxiety or depression

Endocrine: No unexplained weight loss, excessive thirst or excessive urination

Hematology: No easy bruising or bleeding

Allergy: No known environmental allergies

Extended Musculoskeletal:

I reviewed with the patient the following extended musculoskeletal systems.

Past Medical, Family, and Surgical History:

Reviewed Electronic Medical Records: Yes

Patient did not have a prior work related injury to the same body part(s).

Patient did not have a prior non-work related injury to the same body part(s).

Family History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

Past Surgical History Reviewed: Reviewed but does not apply to this Workers' Compensation injury or illness.

SOCIAL HISTORY:

Work Status before this visit: Full Duty

Claim Information: pending.

05/28/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

OBJECTIVE FINDINGS:

Vital Signs:
BP 126/88 (BP Location: LA-LEFT ARM, BP Patient Position: SITTING, Cuff Size: Standard Adult) | Pulse 82 | Temp 37 °C (98.6 °F) (Temporal) | Resp 16 | Ht 1.549 m (5' 1") | Wt 53.9 kg (118 lb 13.3 oz) | BMI 22.45 kg/m²

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant
Ears, Nose, Throat, and Mouth: No signs of trauma, or deformity
Eyes: Conjunctivae and EOMs are normal
Cardiovascular: Normal pulse and rhythm
Respiratory: No respiratory distress
Neurological: No muscle wasting, tremor, or coordination deficits
Skin: Clear warm and dry
Psychiatric: Pleasant, alert, no distress, mood and affect normal

PHYSICAL EXAMINATION:

CERVICAL/ THORACIC SPINE EXAM

Gait: nonantalgic, within normal limits
Palpation: hypertonic tenderness of upper trapezius /left scapula right
Range of Motion: Full range of motion
Special Tests: Negative Spurling's bilaterally
Motor Strength: Normal 5/5 in bilateral upper limbs.
Sensation: within normal limits throughout bilateral limbs.
Reflexes: Normal DTRs bilaterally

Right shoulder
Stance: mild protracted
Tender to palpation anterior deltoid
Non tender to palpation acromioclavicular joint, anterior biceps groove, greater tub
Active range of motion
Flexion 170deg
Abduction 170deg
(-) Hawkins
(-) Neers mild
(-) Speeds

X-ray and laboratory ordered today:

DIAGNOSIS:

S46.811A RIGHT TRAPEZIUS STRAIN, INIT

05/28/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

M89.8X1 RIGHT SCAPULALGIA

There is no evidence of chemical or toxic compounds being involved.

ARE YOUR FINDINGS AND DIAGNOSIS CONSISTENT WITH PATIENT'S ACCOUNT OF INJURY OR ONSET OF ILLNESS?

Yes

IS THERE ANY OTHER CURRENT CONDITON THAT WILL IMPEDE OR DELAY PATIENT'S RECOVERY?

Yes

Chronic RIGHT shoulder impingement DOI 7/10/2020

TREATMENT RENDERED:

Michelle E Tiu has been advised to continue the following previous medication(s):

The medication(s)/supplies/radiological studies ordered this visit:

Hi Dr. Greenwood,

06/04/2024 - Patient Message in OCCUPATIONAL HEALTH SERVICES (continued)

Messages (continued)

I saw Dr. Nicole Pham Bailey last week for pain that is running from my shoulder to my elbow. I noticed that my right hand and arm can get numb if I sleep on my right side and the last few days my right fingers are feeling cold compared to my left hand.

I would like for you to order a cervical spine x-ray and an EMG (electromyography) test with a neurologist to assess the root of the pain. This has been an on going problem because of the nature of the repetitive movement I do at work.

The next available appointment to see you in on June 17, telephone encounter. You didn't have an in person appointment available until July.

I appreciate your assistance.

Thank you,
Michelle Tiu, OD

06/04/2024 - Patient Message in OCCUPATIONAL HEALTH SERVICES (continued)

Messages (continued)

Hi Dr. Pham Bailey,

In my industrial work status report, you requested a workstation ergonomic evaluation and modification. I would like to request a formal ergo evaluation through workman's compensation as
I was injured on the job.

Thank you,
Michelle Tiu, OD

Ergo Evaluation		
From Karina Lisseth (L.V.N.) Bustamante, L.V.N. Last Read in kp.org 6/5/2024 10:39 AM by Tiu, Michelle E	To Tiu, Michelle E	Sent and Delivered 6/5/2024 10:35 AM

Hi Michelle,

I received a response from Dr. Pham and she instructed that you call the WC adjuster for this since it was already approved. Please see Adjuster information below that we have on file. If you have further questions please let us know. Thank you.

Treci Bonfils

Acknowledged by: Atoian, Ani Ardashian (M.D.), M.D. on 06/27/24 1249

Components				
Component	Value	Reference Range	Flag	Lab
CREATININE	0.81	<=1.10 mg/dL	—	SCPMG
EGFR, CREATININE-BASED FORMULA (CKD-EPI 2021)	90	>=60 mL/min/BSA	—	SCPMG
Comment:				

GFR estimate is by the CKD-EPI 2021 equation which uses age, sex, and serum creatinine. GFR estimate is less reliable if on dialysis or if acute kidney injury. Additional advice for the provider is available in Renal Failure Risk Assessment below.

CKD Categorization by GFR & ACR (urine Albumin/Creatinine Ratio)

GFR >3 months	ACR <30(A1)	ACR 30-<300(A2)	ACR 300+(A3)
=====	=====	=====	=====
>=90		CKD1 A2 or *	CKD1 A3
60-<90		CKD2 A2 or *	CKD2 A3
45-<60	CKD3a A1 or *	CKD3a A2	CKD3 A3
30-<45	CKD3b A1	CKD3b A2	CKD3 A3
15-<30	CKD4 A1	CKD4 A2	CKD4 A3
<15	CKD5 A1	CKD5 A2	CKD5 A3

* or may label 'abnormal kidney function' or 'proteinuria' as appropriate.

Components

Component	Value	Reference Range	Flag	Lab
HGBA1C%	5.6	4.6 - 5.6 %	—	SCPMG
Comment: A repeatable HbA1c > or = 6.5% is diagnostic of diabetes. A single HbA1c > or = 6.5% can also be confirmed by a fasting plasma glucose measurement > 125 mg/dL, a random plasma glucose > or = 200 mg/dL, or a 2 hour oral glucose tolerance test result > or = 200 mg/dL. Patients with HbA1c of 5.7-6.4% are at increased risk for future diabetes.

Hi Michelle,

It is likely from the Advil.

Lets do labs. Its time for your annual labs any way; I ordered them.

Also if taking any fish oil, flaxseed oil please stop.

ANI ARDASHIAN ATOIAN MD

Tiu, Michelle E	P Famocimo2 Call Ctr Pool (supporting Ani Ardashian (M.D.) Atoian, M.D.)	6/10/2024 10:26 PM

Hi Dr. Atoian,

I noticed I have been having over 10 bruises all around my body. It is very new to me as I don't usually bruise easilybrus easily. My doctor told me to tell you and ask for some lab work.

Some of my bruises are very deep and black and I also don't recall getting hit.

Recently I had a neck, shoulder and elbow pain and have been taking 400 mg of Advil BID, extra strength magnesium, multivitamins, vitamin D, and calcium. I'm also taking flexiril 5 mg at bedtime.

I've also been having trouble sleeping due to the pain so at times I also take melatonin.

I stopped the magnesium 2 days ago.

Please advise.

Thank you,
Michelle Tiu

Status: Signed	Editor: Greenwood, Murray Andrew (M.D.), M.D. (Physician)	

SUBJECTIVE COMPLAINTS:

Chief Complaint:
SHOULDER INJURY and ELBOW INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:
Mechanism of injury: Developed RIGHT sided pain with reaching out and over shoulder level frequently with non-ergonomic exam room and office. Reports constant keyboarding with arms outstretched, and frequent over head reaching for equipment.

Injury Date: 5/28/2024
Claim Number: 2024050001029
Employer: KP SCAL

ASSESSMENT:
Michelle E Tiu is a 47 year old female who presents with complaints that she relates to an incident at work.

History and physical examination was consistent with
Cervical spine strain
Trapezius strain
Right arm paresthesia- rule out radiculopathy, peripheral neuropathy

06/10/2024 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

PLAN:
XR cervical spine requested
Ibuprofen 400mg three times a day as needed
Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.
Request for additional acupuncture placed.
Request placed for nerve conduction studies/electromyography
The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.
Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.
May return to work modified activity level

Follow up in 2-3 weeks.
Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Diagnostic Testing:
None

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:
The patient's symptoms from the previous visit are:
Gradually improving

Michelle E Tiu is a 47 year old female with the following subjective factors:

Patient Complaints:
Patient started care with Dr. Pham, transferred to Dr. Greenwood.

Since last visit she reports improvement with acupuncture and myofascial /massage.

Currently, the patient points to indicate:
bilateral neck and shoulder girdle pain that is aching and numbing. Pain is rated at 6-8/10 (1=min & 10= max), constant.
right elbow pain that is aching, numbing, and burning. Pain is rated at 4-5/10 (1=min & 10= max), constant.

Aggravated by: any movement, using arms overhead, and pushing and pulling
Alleviated by: acupuncture, ibuprofen

Associated signs and symptoms:

06/10/2024 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

PMH

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, working

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

PHYSICAL EXAMINATION:

Cervical spine

Stance: protracted neck

Tender to palpation bilateral upper trap, lev scap, lower cervical spine midline

Active range of motion

Flexion chin to chest, extension 30 deg aggravates

Rotation 60 deg right , 60 deg left

() Spurling's-> neck SBR+R caused right arm pain

Bilateral shoulder

Negative Apley x2

Neuro

Light touch bilateral upper extremity

CLINICAL HISTORY: Reason: WORK COMP Neck pain with referral to shoulder

Resulted by: Long, Simon King-Hon (M.D.), M.D.
Performed: 06/26/24 0918 - 06/26/24 0941
Resulting lab: PS360

COMPARISON: June 9, 2023

Impression:
FINDINGS/IMPRESSION:
Cervical vertebral bodies are normal in height. Straightening of cervical lordosis may be due to patient position. No acutely displaced fracture is identified. Minimal degenerative changes noted of the cervical spine, manifested by minimal disc space narrowing and osteophyte formation. In the cervical spine, this is most severe at C6-7 and C7-T1, not significantly changed from the prior exam.
No significant soft tissue abnormality.

Patient Instructions

The nurses at Kaiser on the Job- OC would like to thank you for choosing us for your occupational health needs. Our goal is to provide our patients with high quality and compassionate care. We hope you agree that we are meeting this goal.

If you haven't been called and would like to check the status of services your doctor has requested such and PHYSICAL THERAPY / OCCUPATIONAL THERAPY / ACUPUNCTURE / CHIROPRACTOR / MRI(or any other Imaging Study) / NERVE CONDUCTION STUDY in about 5-10 days please call the regional business unit:

Regional Business Unit (RBU)
562-463-4314

If services have been approved and you are assigned a vendor please

06/10/2024 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Patient Instructions (continued)

contact them to schedule your approved services:

One Call
866-672-6812

Medrisk
877-389-4580

Other important phone numbers:

Kaiser Radiology: (714) 223-3028

Kaiser Appointment Center: (833) 574-2273

After this visit, you may receive a SURVEY via Email/mail. Please take the time to fill out this survey as it is important for us to improve care for our patients.

Thank you,

NOTE: To support you during the self-isolation period, **an electronic communication for work or school will be sent to you.** You can access it [here](#) after it is sent to you. From a web browser, you can also print this positive result record to share with your employer or school for specific isolation guidance. You do not need to contact your doctor for an off-work or off-school

SUBJECTIVE COMPLAINTS:

Chief Complaint:
SHOULDER INJURY and ELBOW INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:
Mechanism of injury: Developed RIGHT sided pain with reaching out and over shoulder level frequently with non-ergonomic exam room and office. Reports constant keyboarding with arms outstretched, and frequent over head reaching for equipment.

Injury Date: 5/28/2024
Claim Number: 2024050001029
Employer: KP SCAL

ASSESSMENT:
Michelle E Tiu is a 47 year old female who presents with complaints that she relates to an incident at work.

History and physical examination was consistent with
Cervical spine strain
Trapezius strain
Right arm paresthesia- rule out radiculopathy, peripheral neuropathy

PLAN:
XR cervical spine requested, to be completed
Ibuprofen 400mg three times a day as needed
Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.
Continue approved acupuncture, myofascial release
Prior visit request placed for nerve conduction studies/electromyography
Request placed for Physical Therapy for education in home program

06/17/2024 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist. Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.
Off work, then may return to work modified 6/26/2024

Follow up 7/9/2024
Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Diagnostic Testing:
None

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Gradually improving

Michelle E Tiu is a 47 year old female with the following subjective factors:

Patient Complaints:
Patient started care with Dr. Pham, transferred to Dr. Greenwood.

Since last visit she reports moderate improvement with acupuncture and myofascial treatment, Tylenol and anti-inflammatories. She is getting better range-of-motion and is now able to lay down without severe neck pain. Pain shifted to midline neck and somewhat to the left side as well.

Pain aggravated with reaching out or above chest level with the arms

Currently, the patient points to indicate:
bilateral neck and shoulder girdle pain that is aching and numbing. Pain is rated at 3-4/10 (1=min & 10= max), constant.

Aggravated by: any movement, using arms overhead, and pushing and pulling
Alleviated by: acupuncture, ibuprofen

Associated signs and symptoms:
No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.

06/17/2024 - Video Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

PMH

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Total Temporary Disability (TTD)

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

PHYSICAL EXAMINATION:

Prior visit :

Cervical spine

Stance: protracted neck

Tender to palpation bilateral upper trap, lev scap, lower cervical spine midline

Active range of motion

Flexion chin to chest, extension 40 deg aggravates

Rotation 70 deg right , 60 deg left

() Spurling's-> neck SBR+R caused right arm pain

Bilateral shoulder

Negative Apley x2

Neuro

Light touch bilateral upper extremity reported intact

DIAGNOSES:

S16.1XXD NECK MUSCLE STRAIN, SUBSEQ

M62.838 MUSCLE SPASM OF NECK

Hi Maria,

I realize that 1 break per half shift may not be enough breaks for me as a transition back to work. I was wondering if he can change the note to one 20 minute break after 1 hour of work in an 8 hour work day.

Thank you.

Hi Dr. Greenwood,

My manager, Annie Tran, wouldn't accept your modified duty requests. I would like to return back to work tomorrow but I believe she will only accept one 20 minute break in the morning and one 20 minute break in the afternoon. Can you please change the modified work request so I can return back to work.

Thank you,
Michelle Tiu

Patient Instructions

Your doctor recommends that all adults plan for life's “what ifs” and identify their future health care choices in an Advance Health Care Directive. An Advance Health Care Directive (also known as a Living Will) is a form where you can write down your values and choose a health care decision maker.

We have **Life Care Planning** services that will help you reflect upon your values and beliefs so you may write down your future health care decisions in an Advance Health Care Directive. This type of planning can also help prepare your health care decision maker to honor your wishes.

You can begin your Life Care Planning by following these steps:

1. Call your local Center for Healthy Living department to sign up for a **Life Care Planning workshop** or you can now register for a Life Care Planning Workshop online! Sign in to or register with KP.org, go to Appointment Center, schedule an appointment, Select “Health Education Programs”, then Life Care Planning.
2. Go to kp.org/lifecareplan to view videos and complete and print an interactive Advance Health Care Directive. Be sure to talk with your health care decision maker about your treatment preferences.
3. Your health care team wants to know your wishes. Once completed, have your Advance Directive notarized **or** have two witnesses sign it.
 - **Email a copy to:** scalcentralized-scanning-center@kp.org **OR**

06/26/2024 - Allied Health/Nurse Visit in FAMILY PRACTICE ADULT NURSE CL (continued)

Patient Instructions (continued)

- **Mail a copy to: Kaiser Permanente, Central Scanning Center, 1011 S. East Street, Anaheim, CA 92805.** If you already have an Advance Health Care Directive or completed one as part of a living trust , please **email or send in a copy** to the address above.
4. We recommend you review your Advance Health Care Directive often to make sure it reflects your current values and wishes. **Visit kp.org/lifecareplan or attend a workshop** to help you and your health care decision maker think and talk about what you would want as your life changes.
 5. Talk with your loved ones so they understand your wishes and can follow them.

These are important decisions to make. Life Care Planning is a gift you can give yourself and your family. We encourage you to start your planning today!

Hi Dr. Greenwood,

I did accupuncture yesterday and it really made my neck stiff and sore. I'm gonna wait a day to see if it feels better.

I also am down to my last WC massage. It has been very helpful and I wanted ti request for more sessions.

I also wanted to finally see if you can update my modified work note to have a break after 1

Hi, I got a message to call back but when I did, someone on the line keeps hanging up on me.

I wanted to follow up with the referral for formal Ergo evaluation and extended the massage therapy per our discussion on 6/10/24.

I also wanted to see if I can move the EMG testing to another time and day.

Please message me back.

Thank you,
Michelle Tiu, OD

Chief Complaint:
SHOULDER INJURY and ELBOW INJURY

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:
Mechanism of injury: Developed RIGHT sided pain with reaching out and over shoulder level frequently with non-ergonomic exam room and office. Reports constant keyboarding with arms outstretched, and frequent over head reaching for equipment.

Injury Date: 5/28/2024

07/09/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

Claim Number: 2024050001029

Employer: KP SCAL

ASSESSMENT:

Michelle E Tiu is a 47 year old female who presents with complaints that she relates to an incident at work.

Cervical spine x-ray showed lower level mild degenerative changes with loss of cervical lordosis

History and physical examination was consistent with

Cervical spine strain

Trapezius strain

Right arm paresthesia- rule out radiculopathy, peripheral neuropathy

PLAN:

Ibuprofen 400mg three times a day as needed

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue approved acupuncture, myofascial release

Prior visit request placed for nerve conduction studies/electromyography; to be completed

Continue Physical Therapy for education in home program

Request placed for additional myofascial release

May consider trigger point injection at follow up as indicated, information given to patient

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Return to work usual and customary tasks, recommended 10-20 minutes break morning and afternoon mid shift

Follow up 7/29/2024

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Diagnostic Testing:

XR CERVICAL SPINE AP AND lateral, Jun 26, 2024

FINDINGS/IMPRESSION:

Cervical vertebral bodies are normal in height. Straightening of cervical lordosis may be due to patient position. No acutely displaced fracture is identified. Minimal degenerative changes noted of the cervical spine, manifested by minimal disc space narrowing and osteophyte formation. In the cervical spine, this is most severe at C6-7 and C7-T1, not significantly changed from the prior exam.

No significant soft tissue abnormality.

07/09/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 47 year old female with the following subjective factors:

Patient Complaints:

Patient started care with Dr. Pham, transferred to Dr. Greenwood.

Since last visit she reports moderate improvement with acupuncture and myofascial treatment, Tylenol and anti-inflammatories. She is getting better range-of-motion and is now able to lay down without severe neck pain and generally awakens without pain in the morning.

Pain still aggravated with reaching out or above chest level with the arms. She is work modified, acting reader but feels capable of returning to regular job tasks. She is able to partial obtain relief with Physical Therapy and her home exercise and stretching throughout the day. Massage/myofascial release has been exceptionally helpful in reducing the tight 'knot' on the right side of her neck

Currently, the patient points to indicate:
bilateral neck and shoulder girdle pain that is aching and numbing. Pain is rated at 3-4/10 (1=min & 10=max), intermittent

Aggravated by: any movement, using arms overhead, and pushing and pulling
Alleviated by: acupuncture, ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

PMH

REVIEW OF SYSTEMS:

I have reviewed the following systems:

07/09/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Total Temporary Disability (TTD)

OBJECTIVE FINDINGS:

Vital Signs:

There were no vitals taken for this visit.

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

PHYSICAL EXAMINATION:

Prior visit :

Cervical spine

Stance: protracted neck

Tender to palpation bilateral (left > right) upper trap, lev scap, lower cervical spine midline; associated myofascial bending/trigger point right upper trapezius

Active range of motion

Flexion chin to chest, extension 40 deg aggravates

Rotation 70 deg right , 65 deg left

() Spurling's-> neck SBR-R caused right trap pain

Bilateral shoulder

Negative Apley x2

Neuro

Light touch bilateral upper extremity reported intact

DIAGNOSES:

Patient Instructions

MAY CONSIDER TRIGGER POINT INJECTIONS:**Patient Education Your Kaiser Permanente Care Instructions****Learning About Trigger Point Injections****What are trigger point injections?**

A trigger point is a painful knot in a tight band of muscle. A trigger point often causes pain to be felt in other areas, too. For example, a trigger point in the neck or upper back can cause pain in the head.

Trigger point injections are shots of medicine into these knots to help relieve the pain. The medicines are usually local anesthetics like lidocaine.

Trigger point injections are often part of plan that includes other treatments, such as muscle stretching and strengthening.

How is a trigger point injection done?

Your doctor first locates a trigger point by pressing around the painful area. This may cause your muscle to hurt or twitch. This tells the doctor that it's the right spot to do the injection.

The area is cleaned. Your doctor then injects the medicine into the trigger point. The doctor may inject the medicine in more than one direction within the trigger point. The doctor may change direction without removing the needle.

If you have more than one trigger point in the muscle, your doctor may repeat the process.

Your doctor may stretch the area to help the muscle relax. You may be shown how to move and stretch the

07/09/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Patient Instructions (continued)

muscle yourself.

How long does a trigger point injection take?

The procedure takes about 10 to 30 minutes. How long it takes depends on how many trigger points are treated. But the injection itself takes only a few moments.

What can you expect after a trigger point injection?

The area may feel a bit numb for a few hours. It may also feel sore. Other problems from trigger point injections are rare. There is a chance of a skin infection at the injection site. And if injections are done in the chest area, there is a small risk of puncturing the outer lining of the lung (pneumothorax).

Trigger point injections may reduce some or all of your pain. But the pain can come back after the medicine wears off. If your pain comes back, your doctor may suggest more shots or other treatment for longer-lasting relief.

Follow your doctor's instructions carefully. And tell your doctor about any new or unusual symptoms, such as chest pain or shortness of breath.

Follow-up care is a key part of your treatment and safety. Be sure to make and go to all appointments, and call your doctor if you are having problems. It's also a good idea to know your test results and keep a list of the medicines you take.

SUBJECTIVE COMPLAINTS:

Chief Complaint:
STRESS

Translation required: No

CURRENT TREATMENT REVIEW FOR THIS INJURY/ILLNESS:
I amd the INTERIM treating physician. The primary treating physician (PTP). is not in his office today.

Injury Date: 5/28/2024
Claim Number: 2024050001029
Employer: KP SCAL

Subjective
Patient last seen 7/9/2024 - is STRESSED with "being taken off work due to change of work restrictions , wants to get her 1 hr lunch back, and does not want to be taken off on leave of absence"
She does not want to file a stress claim .
She wants to find out how to reduce her workload- number of patients daily

Mechanism of injury: Developed RIGHT sided pain with reaching out and over shoulder level frequently with non-ergonomic exam room and office. Reports constant keyboarding with arms outstretched, and frequent over head reaching for equipment.

Current prescribed/advised treatment detail:

07/11/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)**TREATMENT PROGRESS:**

The patient's symptoms from the previous visit are:
Improved

Michelle E Tiu is a 47 year old female with the following subjective factors:

Patient Complaints:
Reviewed past note

Pain still aggravated with reaching out or above chest level with the arms. She is work modified, acting reader but feels capable of returning to regular job tasks. She is able to partial obtain relief with Physical Therapy and her home exercise and stretching throughout the day. Massage/myofascial release has been exceptionally helpful in reducing the tight 'knot' on the right side of her neck

Currently, the patient points to indicate:
bilateral neck and shoulder girdle pain that is aching and numbing. Pain is rated at 3-4/10 (1=min & 10=max), intermittent

Aggravated by: any movement, using arms overhead, and pushing and pulling
Alleviated by: acupuncture, ibuprofen

Associated signs and symptoms:
No fever, chills, or unintentional weight loss.
No pins/needles, numbness, radiating symptoms or weakness.
No changes to baseline bowel/bladder habits.
No associated musculoskeletal pain other than mentioned in HPI.
No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

PAST MEDICAL HISTORY:: Right shoulder claim

REVIEW OF SYSTEMS:

I have reviewed the following systems:

General: No fever, chills, or sweats

Gastrointestinal: No rectal bleeding or black stools

SOCIAL HISTORY:

Work Status before this visit: Modified Duty, not working, not accommodated

07/11/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

OBJECTIVE FINDINGS:

Vital Signs:
BP 131/84 (BP Location: RA-RIGHT ARM, BP Patient Position: SITTING, Cuff Size: Standard Adult) | Pulse 93 | Temp 36.8 °C (98.2 °F) (Temporal) | Ht 1.549 m (5' 1") | Wt 53.4 kg (117 lb 11.6 oz) | SpO2 97% | BMI 22.24 kg/m²

I confirm that I have performed the following examination(s):

Constitutional: Well developed and well nourished and Alert and conversant

PHYSICAL EXAMINATION:

Prior visit :
Cervical spine
Stance: protracted neck
Tender to palpation bilateral (left > right) upper trap, lev scap, lower cervical spine midline; associated myofascial bending/trigger point right upper trapezius
Active range of motion
Flexion chin to chest, extension 40 deg aggravates
Rotation 70 deg right , 65 deg left
() Spurling's-> neck SBR-R caused right trap pain

Bilateral shoulder
Negative Apley x2

Neuro
Light touch bilateral upper extremity reported intact

Diagnostic Testing:
XR CERVICAL SPINE AP AND lateral, Jun 26, 2024

FINDINGS/IMPRESSION:
Cervical vertebral bodies are normal in height. Straightening of cervical lordosis may be due to patient position. No acutely displaced fracture is identified. Minimal degenerative changes noted of the cervical spine, manifested by minimal disc space narrowing and osteophyte formation. In the cervical spine, this is most severe at C6-7 and C7-T1, not significantly changed from the prior exam.
No significant soft tissue abnormality.

Order Specific Question: View by Date (Maximum 1 year):

Answer: 10/9/2024

Order Specific Question: Result Release to patient?

Answer: Immediate

Treatment Rendered:

Reviewed prior note

Cervical spine x-ray showed lower level mild degenerative changes with loss of cervical lordosis

History and physical examination was consistent with

Cervical spine strain

Trapezius strain

Right arm paresthesia- rule out radiculopathy, peripheral neuropathy

PLAN:

Ibuprofen 400mg three times a day as needed

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Continue approved acupuncture, myofascial release

Prior visit request placed for nerve conduction studies/electromyography; to be completed

Continue Physical Therapy for education in home program

Request placed for additional myofascial release

May consider trigger point injection at follow up as indicated, information given to patient

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Return to work usual and customary tasks, recommended 10-20 minutes break morning and afternoon mid shift

07/11/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Follow up 7/29/2024

Work note changed to resume prior work restrictions from 7/8/24

Dear Michelle E Tiu

Your healthcare team has prescribed an online education program for you.

PROGRAM:
Click on this link to begin your education program:
https://my-emmi.com/EmmiServer/AutoStart.jsp?message_id=000099&q=eyJhY2Nlc3NfY29kZSI6IjE3OTYyMjk1NjI2IiwiaZG9ibSI6IjEwIiwiaZG9iZCI6IjMxIiwiaZG9ieSI6IjE5NzYifQ==
Access code: 17962295626
Expiration date: Oct 09, 2024
PLEASE VIEW BY: Oct 09, 2024

This program gives you accurate, easy-to-understand information about your condition or upcoming procedure. You can watch it as many times as you want and it's easy to share with family and friends. Online education programs may be available in languages other than English. You can select alternate languages (if available) prior to viewing your program.

Need help accessing your online education program? Contact us at support@my-emmi.com or 866-294-3664.

For questions and further information concerning the program content, please contact your provider's office.

Claim Number: 2024050001029
Employer: KP SCAL

07/29/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)

Clinical Notes (continued)

ASSESSMENT:

Michelle E Tiu is a 47 year old female who presents with complaints that she relates to an incident at work.

Cervical spine x-ray showed lower level mild degenerative changes with loss of cervical lordosis

History and physical examination was consistent with

Cervical spine strain

Trapezius strain

Right arm paresthesia- rule out radiculopathy, peripheral neuropathy

PLAN:

Ibuprofen 400mg three times a day as needed

Discontinue medication if stomach upset, nausea, black stool, rash or itching develops.

Prior visit request placed for nerve conduction studies/electromyography; to be completed

Continue Physical Therapy for education in home program, manual therapy

Continue myofascial release

Request placed for ergonomic assessment of workstation

May consider trigger point injection at follow up as indicated, information given to patient

The patient may benefit from repeat and/or advanced imaging and other investigations if symptoms persist.

Follow up advised with primary care practitioner for evaluation and treatment of any non work-related conditions.

Return to work usual and customary tasks, recommended 20 minute stretch break morning and afternoon mid shift

Follow up 7/29/2024

Return to clinic sooner if symptoms worsen, fail to resolve, or as needed.

The scope of this visit was limited to the patient's chief complaint, and the patient was in agreement. The treatment plan was discussed with patient, and the patient was in agreement with plan and expressed understanding.

Diagnostic Testing:

XR CERVICAL SPINE AP AND lateral, Jun 26, 2024

FINDINGS/IMPRESSION:

Cervical vertebral bodies are normal in height. Straightening of cervical lordosis may be due to patient position. No acutely displaced fracture is identified. Minimal degenerative changes noted of the cervical spine, manifested by minimal disc space narrowing and osteophyte formation. In the cervical spine, this is most severe at C6-7 and C7-T1, not significantly changed from the prior exam.

No significant soft tissue abnormality.

This report electronically signed by SIMON LONG on 6/27/2024 2:48 PM

07/29/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

Current prescribed/advised treatment detail:

TREATMENT PROGRESS:

The patient's symptoms from the previous visit are:

Improved

Michelle E Tiu is a 47 year old female with the following subjective factors:

Patient Complaints:

Patient started care with Dr. Pham, transferred to Dr. Greenwood.

She reported moderate improvement with acupuncture and myofascial treatment, Tylenol and anti-inflammatories. She reported better range-of-motion and is now able to lay down without severe neck pain and generally awakens without pain in the morning.

Pain still aggravated with reaching out or above chest level with the arms. She is work modified, acting as greeter but feels capable of returning to regular job tasks if she had a brief stretch break morning and afternoon. She is able to partial obtain relief with Physical Therapy and her home exercise and stretching throughout the day. Massage/myofascial release has been exceptionally helpful in reducing the tight 'knot' on the right side of her neck, but discomfort persists

Currently, the patient points to indicate:

bilateral neck and shoulder girdle pain that is aching and numbing. Pain is rated at 3-4/10 (1=min & 10=max), intermittent

Aggravated by: any movement, using arms overhead, and pushing and pulling

Alleviated by: acupuncture, ibuprofen

Associated signs and symptoms:

No fever, chills, or unintentional weight loss.

No pins/needles, numbness, radiating symptoms or weakness.

No changes to baseline bowel/bladder habits.

No associated musculoskeletal pain other than mentioned in HPI.

No associated valsalva pain

Patient denies history of ulcers, reflux, or renal function impairment.

PMH

REVIEW OF SYSTEMS:

I have reviewed the following systems:

07/29/2024 - Office Visit in OCCUPATIONAL HEALTH SERVICES (continued)**Clinical Notes (continued)**

General: No fever, chills, or sweats

EMG

EMG Summary Table											
			Insertional	Spontaneous			MUAP				
Muscle	Nerve	Roots	Insertional	Fib	PSW	Fasc	Duration	Amplitude	PP	Config	Recruit
R. First dorsal interosseous	Ulnar	C8-T1	Normal	None	None	None	Sl. Inc	Sl. Inc	N	Unstable	Reduced
R. Abductor pollicis brevis	Median	C8-T1	Normal	None	None	None	Sl. Inc	Sl. Inc	N	Unstable	Normal
R. Pronator teres	Median	C6-C7	Normal	None	None	None	N	N	N	Normal	Normal
R. Deltoid	Axillary	C5-C6	Normal	None	None	None	N	N	N	Normal	Normal
R. Triceps brachii	Radial	C6-C8	Normal	None	None	None	Gr. Inc	Gr. Inc	Fe w	Unstable	Reduced
R. Biceps brachii	Musculocutaneous	C5-C6	Normal	None	None	None	N	N	N	Normal	Normal
R. Cervical paraspinals	Spinal	C4-C8	Normal	None	None	None	N	N	N	Normal	Normal

Findings: Routine nerve conduction studies were normal except for a prolonged right median sensory latency across the right wrist. The median motor, ulnar motor/sensory and radial sensory studies were normal. Needle EMG of the right upper extremity was normal except for enlarged and unstable motor unit potentials with reduced recruitment notable in the right C8 myotome, there were no abnormal insertional activity.

Conclusion: The findings are consistent with mild right carpal tunnel syndrome (median nerve entrapment at the wrist) and evidence of chronic denervation in the right C8 myotome without evidence of ongoing denervation, consistent with findings of chronic right C8 radiculopathy.
